

Design image of Galaxy Note 20

Based on leaked information, Letsgodigital created a design of the Galaxy Note 20, which seems to be closest to reality.

Last month, Samsung launched the Galaxy S20 series smartphones, with some design changes. Now, we continue to expect the next flagship smartphone, the Galaxy Note 20 is expected to launch later this year. A few leaked information about Galaxy Note 20 has begun to be revealed.

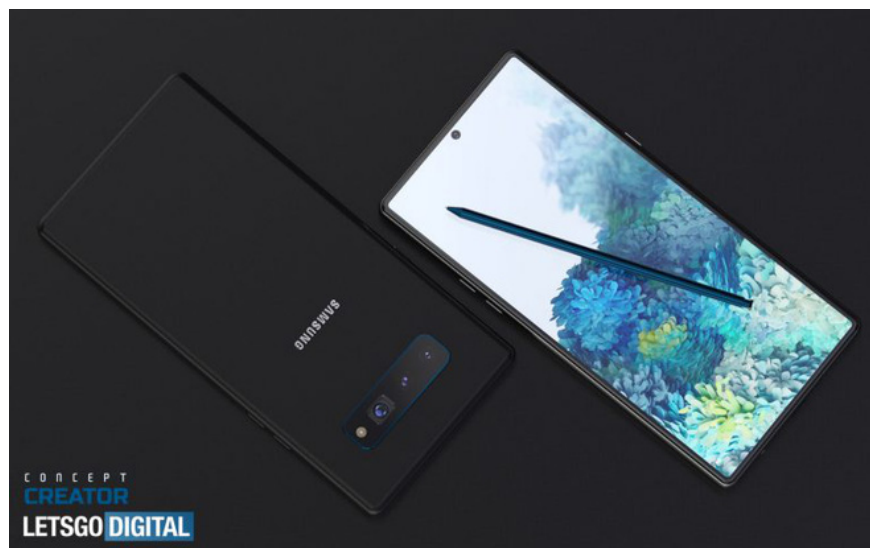

Based on leaked information, Letsgodigital created a design of the Galaxy Note 20, which seems to be closest to reality. While nothing has been confirmed yet, these images show us what the Galaxy Note 20's exterior design will look like.

Unlike the Galaxy S20, the Galaxy Note 20 will not have many curves, instead it will be more sturdy and masculine. The screen is flatter and does not bend much on either side. In addition, the Galaxy Note 20 still has a perforated screen with a selfie camera in the middle.

The rear camera cluster is an interesting detail. Because Samsung has changed the camera cluster on Note 10, placed vertically in the upper left corner. But according to Letsgodigital's design, the Note 20's camera cluster is horizontal, similar to the old style design on Note 9.

The Galaxy Note 20 will also feature a 120Hz screen and improved S-Pen. And certainly, the camera cluster will also inherit many special features of the S20, possibly a 108MP sensor and an impressive 100x zoom capability.

Of course, this is just a drawing of Letsgodigital's Galaxy Note 20, the actual design of this smartphone may be completely different. Samsung is expected to launch the Galaxy Note 20 sometime in late August or early September.
