

Detailed evaluation of Bphone B86: Reached the required 'QUALITY' level

Bphone B86 is a turning point of BKAV in bringing an unprecedented smartphone experience to Vietnamese technology users.

As a product line for Vietnamese consumers, Bphone has become one of the symbols of Vietnamese smartphones in the market today. With the slogan "Unlimited experience", the new generation of Bphone not only brings valuable upgrades when compared to its previous version of Bphone 3, but also brings users extremely interesting experiences.

**THIẾT KẾ KÍNH CAO CẤP,
KHÔNG NÚT BẤM, MÀN HÌNH
“TRÀN ĐÁY” HIỆN ĐẠI**

 BKAV BPHONE B86

The orientation of BKAV is completely different from other manufacturers in the market. With one year showing a unique product line, BKAV wants its smartphone to be carefully invested and cared for. Therefore, the Bphone product line always carries in itself a high-class and luxurious design. Bphone B86 too, carrying a complete design from glass material with a metal frame, **Bphone B86** will make anyone in their hands feel satisfied, even the users. The most fastidious technology.

Thiết kế chính là điểm nhấn đặc trưng của dòng Bphone từ trước tới nay. Năm nay BKAV đã loại bỏ gần như hoàn toàn các nút bấm vật lý trên Bphone để cho người dùng một trải nghiệm liền mạch hơn

Like the previous generation, the design of Bphone B86 may not have too much to say when it has almost reached its peak in design, especially in the 9 million VND segment of Bphone B86. In this price segment, few smartphones on the market are as beautiful as the Bphone B86, most are made from plastic and have a bold design of mid-range products.

If in the previous generation, Bphone had only two unique color options that caused many users to be down, then with this year's Bphone generation, BKAV has launched two new color options: Lotus Pink and Lotus. Jade green next to the basic black and white. With two new color options, Bphone will expand its audience rather than focusing on business users.

One of the characteristics inherited successfully by Bphone B86 from the previous generation is the modern "bottomless" screen. This can be considered as a factor that helps Bphone B86 in particular and Bphone product line in general become completely different from competitors in the market.

While other smartphones in the same price range are still "stuck" in the design of "water drops", "moles" are defective, Bphone has moved a step further, giving users a device with screen "overflow" that Google later also had to learn this design.

CAMERA NHIẾP ẢNH ĐIỆN TOÁN - CÔNG NGHỆ CỦA TƯƠNG LAI

 BKAV BPHONE B86

Besides the design element, the camera is also one of the things that BKAV CEO Nguyen Tu Quang pays special attention to. Now with the advanced computer photography technology, Bphone B86 can capture moments that are difficult for the naked eye to see.

- Camera “bếp từ” trên Bphone B86 thực sự có thể làm được những điều phi thường

Thanks to computational photography, combined with superior image processing algorithms developed by BKAV engineers, Bphone B86 "unlocks" a range of features and professional photography modes such as sCorrection, sMacro , sNight or Moment mode is extremely useful that no other smartphone on the market has.

- Loạt chế độ chụp ảnh mà chẳng phải chiếc smartphone nào cũng có

Try taking a test shot with the AI ??camera on Bphone B86, the images produced in automatic shooting mode are of high quality, details are reproduced very well. With the sCorrection feature, the device's AI processes colors and intervenes right from the raw light data before reproducing the image, preserving the maximum color fidelity, resulting in consistent colors. most appropriate and truthful compared to reality.

A glimpse of Hanoi through the lens of Bphone B86

That's just the automatic shooting mode, with the sMacro and Moment shooting modes, this is the time when Bphone B86 shows the power of computer photography when it can handle a lot of data while still having can produce a good image quality.

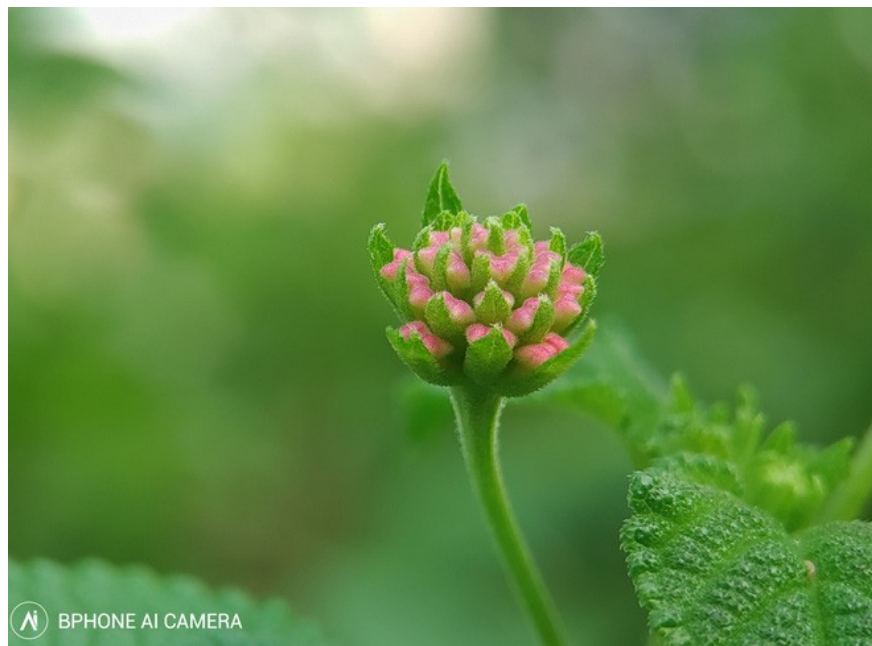

With moment mode, computer photography on Bphone B86 is really "awesome" when it is possible to capture things that the human eye can hardly recognize.

In macro mode (sMacro), Bphone B86 has once again demonstrated the power of computational photography.

The image-matching algorithm using Bphone's sNight mode produces images of very good quality, high details, bright enough, vivid colors. In this mode, the user needs to hold the device firmly in his hand to avoid blurry images

In terms of using the power of computational photography to overcome the camera hardware barrier on Bphone B86, we appreciate what BKAV is doing with our product line. Equipping flashy hardware is not always good without additional software.

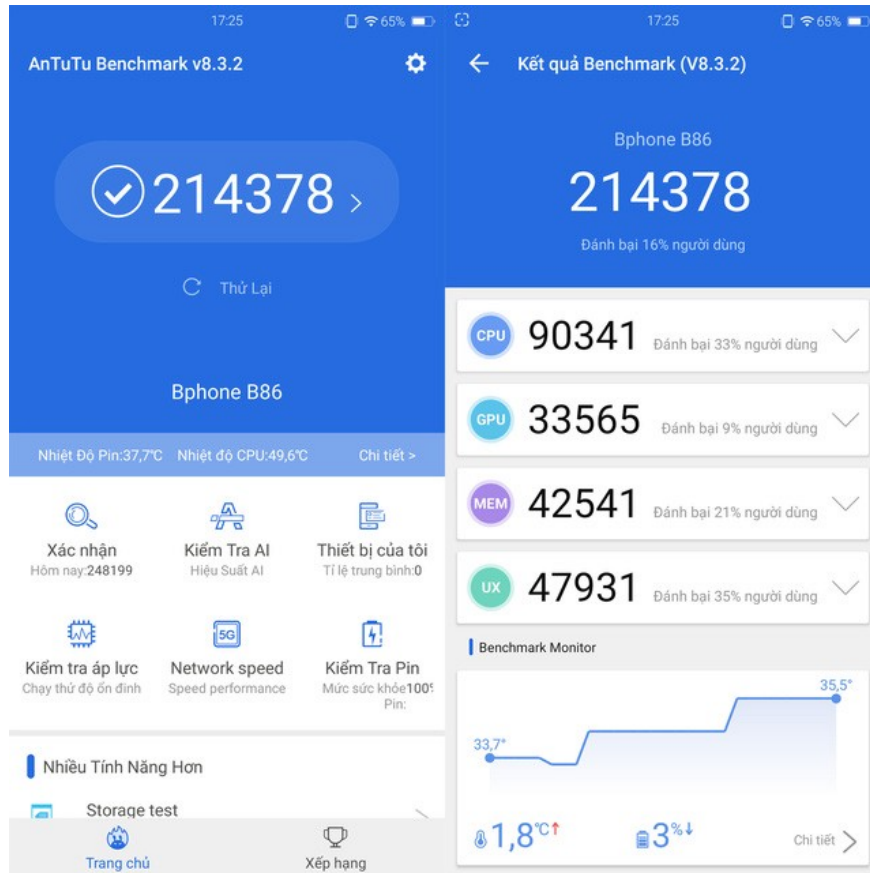

HIỆU NĂNG - PHẦN MỀM BỔ TRỢ PHẦN CỨNG

■ BKAV BPHONE B86

Bphone B86 is equipped with Snapdragon 675 chip, 4GB RAM and 64GB storage. With this hardware, Bphone B86 is not really a smartphone with "terrible" performance in the segment, but as BKAV mentioned at the launch event, Bphone B86 is not a smartphone running in terms of structure. image, user experience is what BKAV cares about.

Although the Snapdragon 675 is not a new chip, its performance is still appreciated by many users, including at the present time in 2020. Because it is a chip for very good AI processing performance, that is why BKAV has chosen this chip for Bphone B86 in undertaking flexible AI tasks of the machine.

Testing Bphone B86 performance score with dedicated Antutu Benchmark software, the device achieved more than 214,000 points with 90,000 CPU performance points and 33,000 GPU performance points

With this performance score, Bphone B86 can completely play today's popular games from light to heavy. However, it should be noted that Bphone B86 is not a phone born for gaming, so if you use B86 to play games for a long time, the device may experience temperature problems. .

- Bphone B86 có cả chế độ Game Mode cho phép người dùng có thể tùy chỉnh một số tính năng khi đang chơi game như chụp hoặc quay lại màn hình

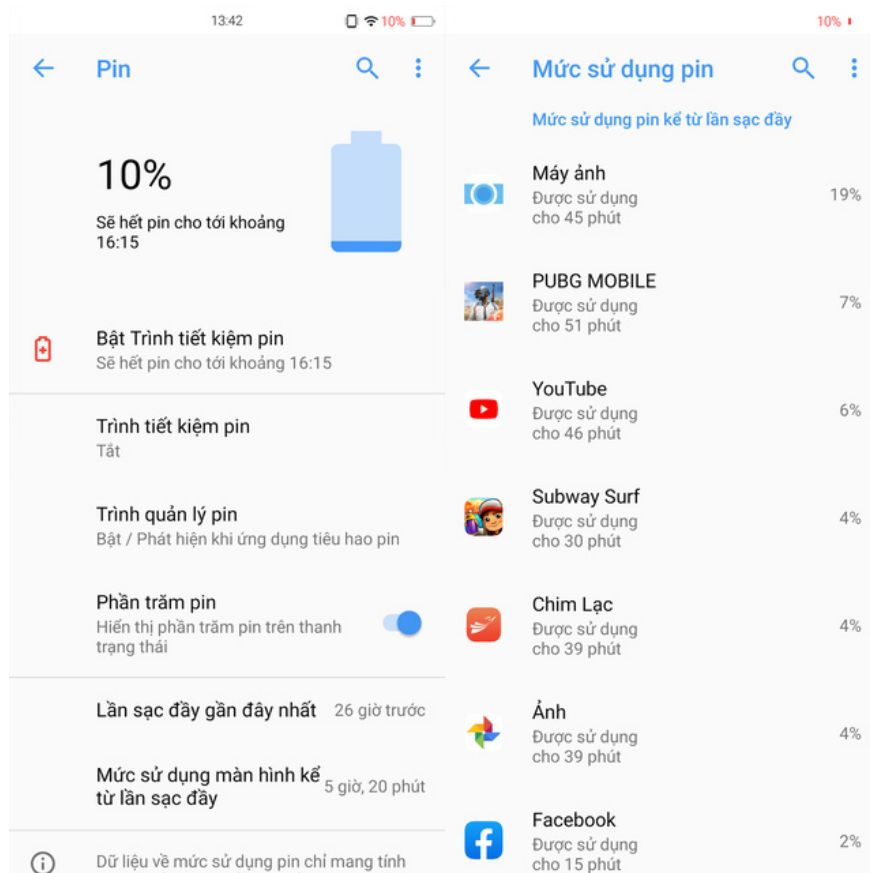

Referring to the hardware factor, it is impossible not to mention the proprietary BOS software that is integrated by BKAV on its Bphone models. The new version of operating system named BKAV BOS 8.6 brings in a series of features to help users get a "beyond the limit" experience.

BOS 8.6 continues to inherit and promote the strength of the software, improve, add gesture gestures to help users during use with the Bphone B86 without buttons.

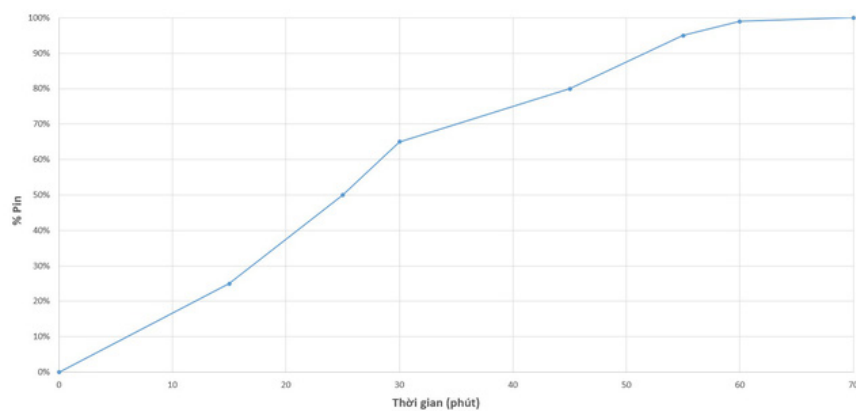

Using a separate BOS operating system, which is strongly optimized for hardware on Bphone B86, so even if there is only a 3000mAh battery, Bphone B86 can still be used comfortably for a day or even 1.5 days with basic tasks (no gaming).

A user's daily tasks for up to 5 hours on-screen

And yet, with Quick Charge 3.0 fast charging technology, fully charging the battery for Bphone B86 will now only take about more than 1 hour. Therefore, users can rest assured Bphone B86 will fully meet the needs of one-day use.

Bphone B86 charging time chart, the device takes just over 1 hour to fully charge the battery with the 18.0 QC 3.0 quick charger included

TẠM KẾT

 BPHONE B86

With the philosophy of "Unlimited Experience", Bphone B86 and new Bphone product lines not only bring users unprecedented experience, but also demonstrate the power of software, for the power of Bphone. Computing technology is widely used in many situations to improve the user experience in a more positive way. And that is the turning point of BKAV in coming to success.
