

Detailed guide to Duels Machine in Steal a Brainrot and how to play PvP safely.

Guide on how to use the Duels Machine in Steal a Brainrot: PvP tips, rare Brainrot betting rules, and how to easily win the Bo5 series.

The Duels Machine is one of the riskiest yet most rewarding features in **Steal a Brainrot** . It transforms ordinary PvP battles into a dramatic gamble, where players must use their own "Brainrot" items as collateral.

What is a Duels Machine and how does it work?

Located right next to the Gears Shop, Duels Machine allows two players to enter a separate arena. The core rule is simple: **Steal your opponent's Brainrot before they do the same to you.**

1. **Winner:** Receives the Brainrot item that the opponent bet on.
2. **Loser:** Completely loses all items bet on, including extremely rare *Secrets* or *Brainrot Gods* .

How to start a match in Steal a Brainrot

To initiate a confrontation, you need to follow these steps:

1. Interact with the Duels Machine and select a player you want to challenge (from your current server, your friends list, or enter a global ID).

2. After the opponent accepts, both will be transferred to a private server containing only their base.
3. Each person chooses a Brainrot to bet on. The item value for both sides will be displayed publicly on the screen.
4. Press confirm to begin the battle.

Rules of combat and determining victory and defeat.

This arena was designed to ensure fairness and eliminate outside interference:

1. **Format:** Best-of-Five (Bo5) competition. The first player to steal their opponent's Brainrot **three times** wins the match.
2. **Equipment:** Players are allowed to use all unlocked Gear based on their current Rebirth level. There are no equipment restrictions in this arena.
3. **After the match:** You should choose to exit instead of returning to the public server immediately to avoid having your items stolen by others right after the match ends.

Experience in safe and effective challenge

Using the Duels Machine can ruin all your hard work if you're not careful. Keep these tips in mind:

1. **Check the value:** Always compare the value of the items you bet with your opponent. Don't bet an extremely rare Brainrot in exchange for a low-value item.
2. **Don't rush:** Use the final confirmation screen to double-check your selection. Once you press "Ready," the match cannot be canceled.
3. **Choosing your betting items:** Only bet on Brainrots that you can replace. Be extremely cautious when betting on *Secrets*, *OG*, or *Limited Stock units*.
4. **Note on Mutations:** Some Brainrots have hidden stats or mutations that provide combat advantages whose income value is not fully displayed.

Should you use a Duels Machine?

This is a safer alternative to attempting to steal on a public server because you control the risk and your opponents. However, a single loss can wipe out hours of gameplay. Treat this as a calculated battle of wits rather than an impulsive decision.
