

Detailed instructions on how to create a video from photos in the simplest way.

To create videos from photos to preserve beautiful memories, users can use professional tools like Adobe Premiere or, more simply, use software like ProShow Producer, which has a simple and user-friendly interface, even for beginners who are learning the basics of creating videos from photos.

There are many software and tools available today that allow users to **create videos from photos in the simplest way** . You don't even need to be a computer expert. The video creation tool from photos that TipsMake wants to discuss in this article is **ProShow Producer** . This software helps you create videos from photos easily, and when needed, it can still meet your requirements for more advanced video creation.

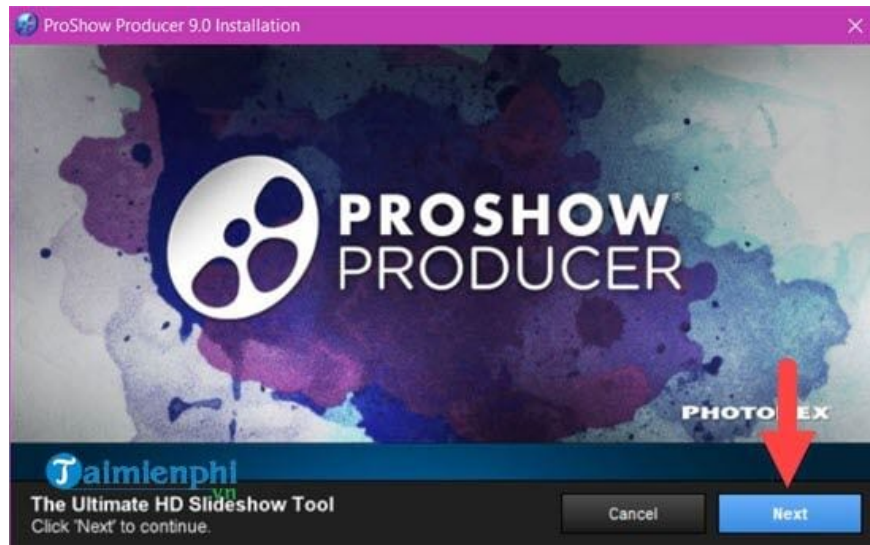

Creating a video from photos in the simplest way.

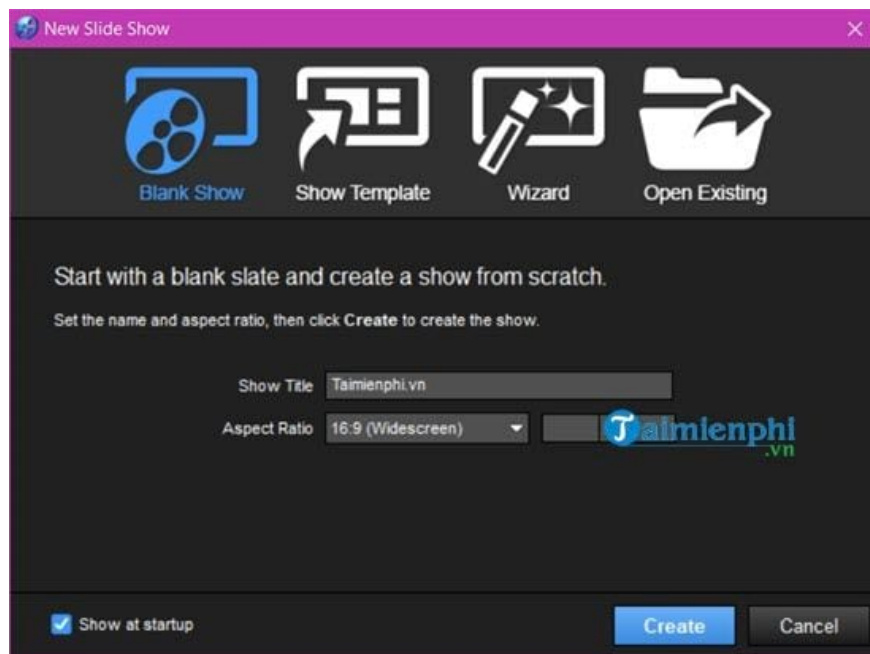

First, download **ProShow Producer** from here.

>> Refer to the instructions on how to install ProShow Producer here.

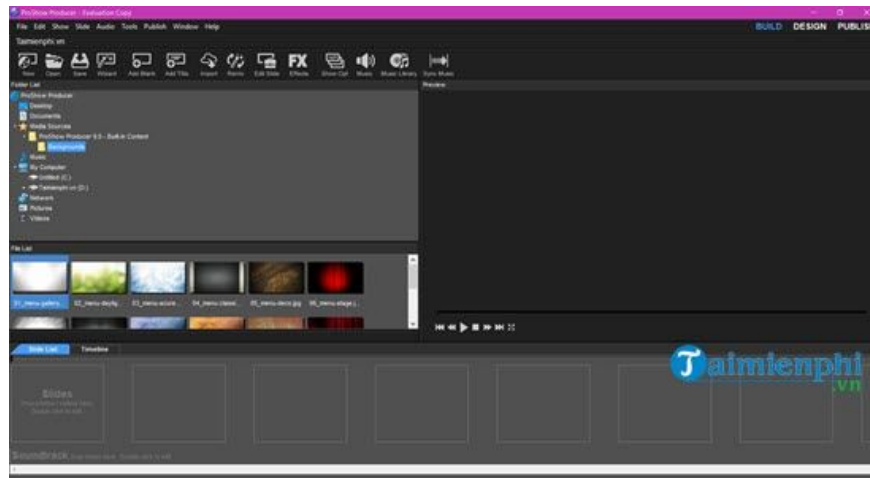

Step 1: After downloading ProShow Producer, proceed with the installation first. You can refer to the instructions above to learn how to install ProShow Producer before creating a video from photos in the simplest way.

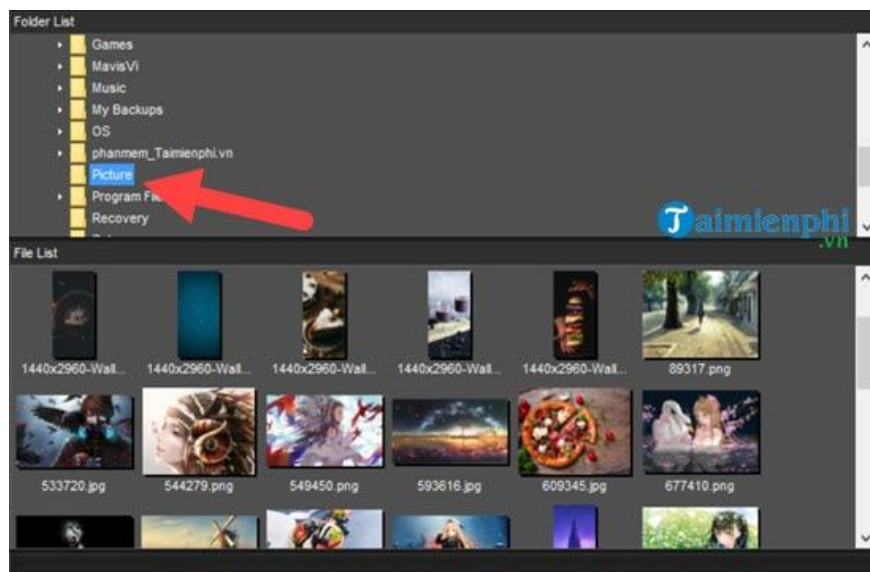

Step 2: Next, open the software. There are four options for the user, and here we choose "**blankshow**" for the easiest operation.

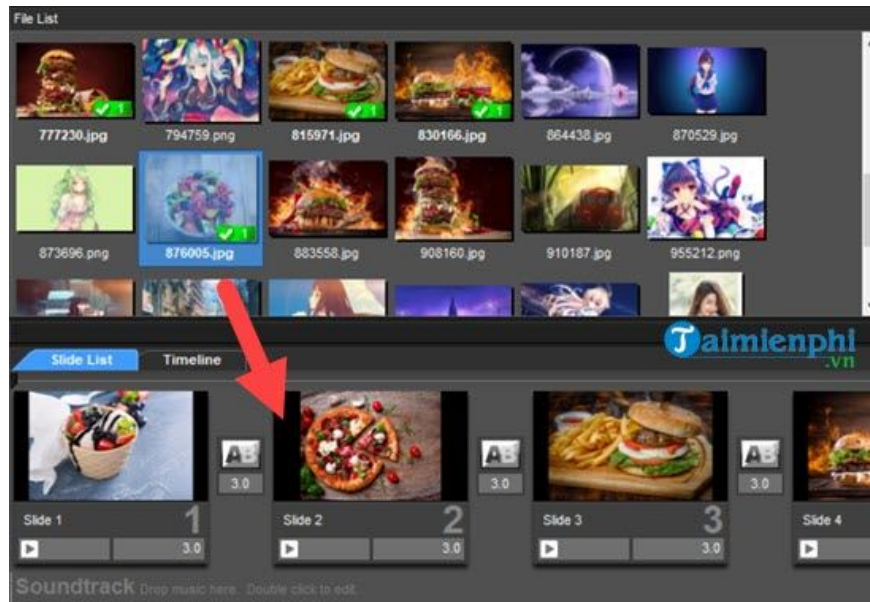

Step 3: The ProShow Producer interface has appeared. Now let's start creating a video from the photos already on your computer.

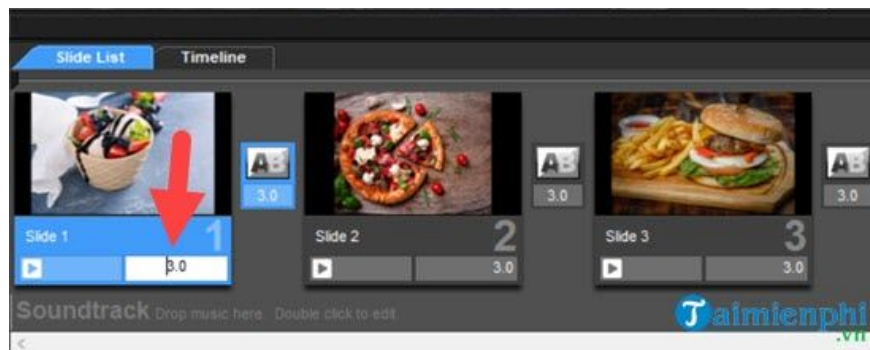

Step 4: In the **Folder List** section , select the folder on your computer where your photos are stored.

Step 5: Then, in the **File List** section , simply select one or more photos at a time and drag them down to the Timeline of ProShow Producer.

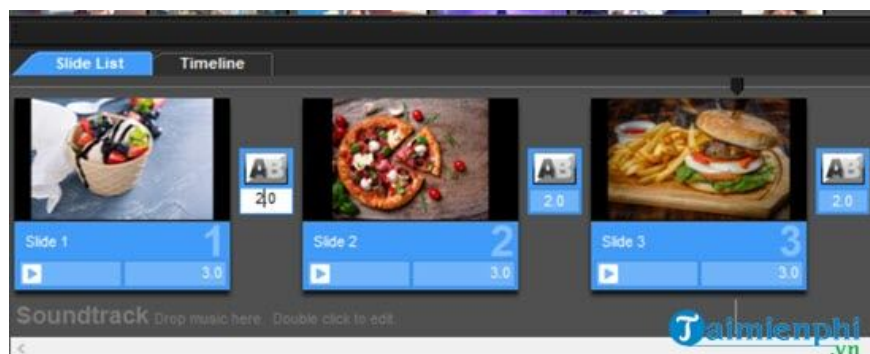

Step 6: Here we have the option to click on each slide to adjust the display time (in seconds).

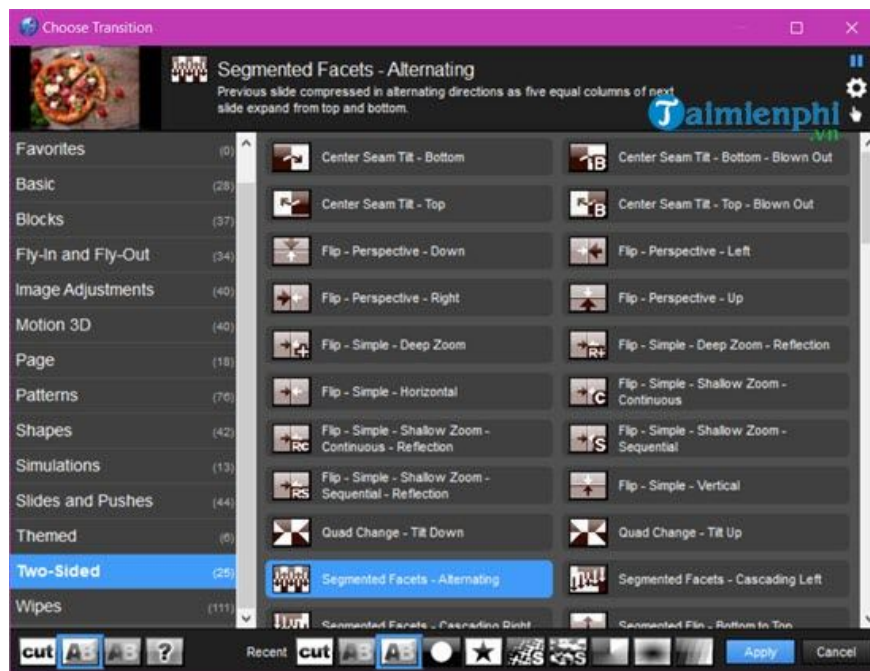

Alternatively, you can hold down Shift and click on all the slides, then adjust the duration of one slide; all the remaining slides will be adjusted accordingly.

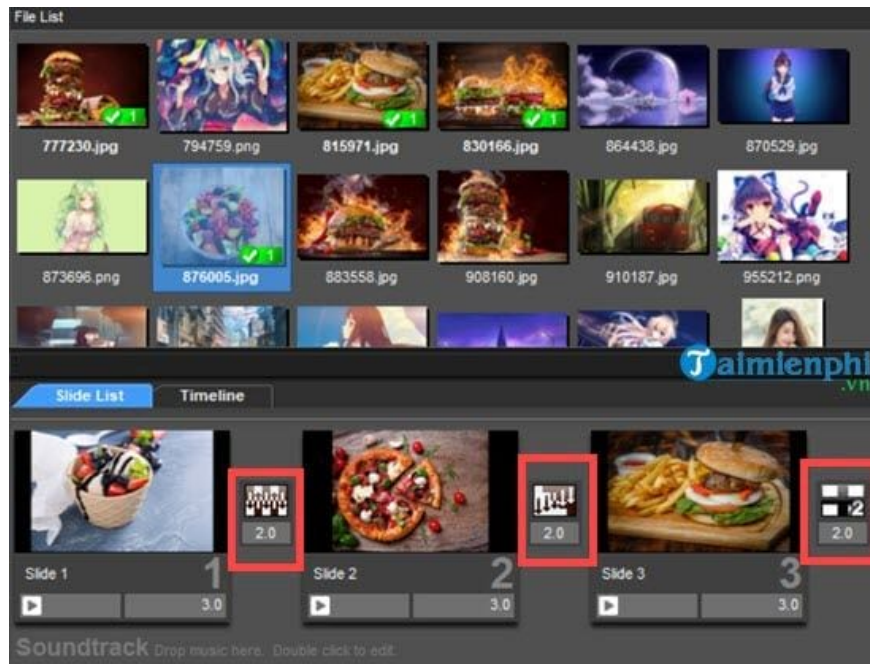

Note: This applies to all effects if you select multiple ones.

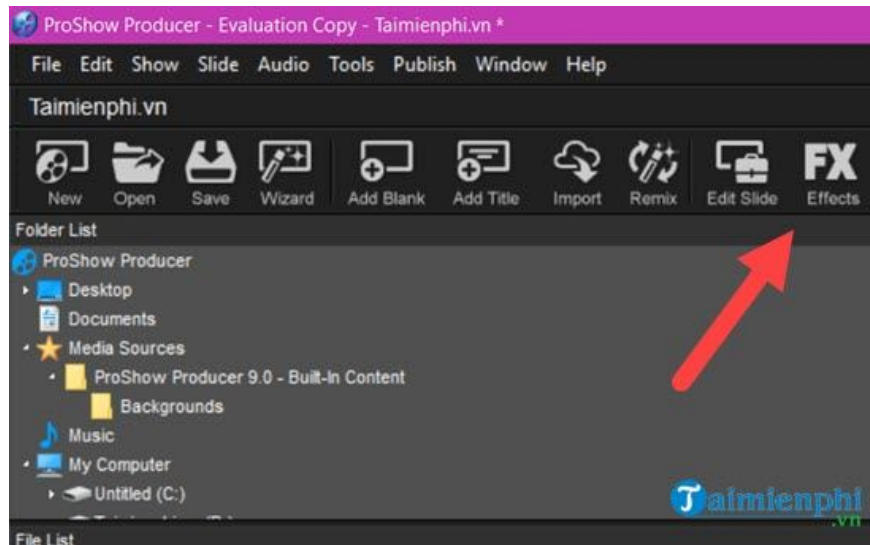

Step 7: The next step is to add effects to each slide or multiple slides using the method above. There are hundreds of effects available, and if you don't know which one to choose, just leave it **random** by clicking on the "?" icon. You can then edit it later if you feel it's not suitable.

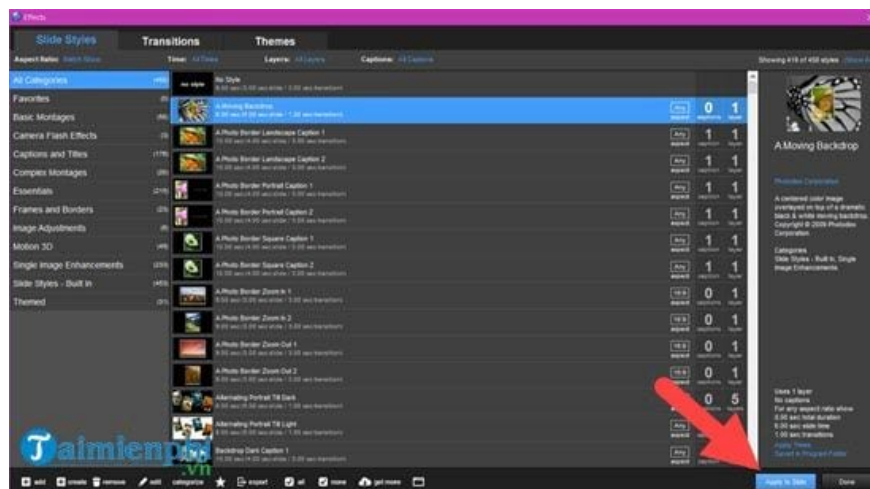

You can customize each slide to have identical or different effects; ideally, they should be different to make the video more dynamic.

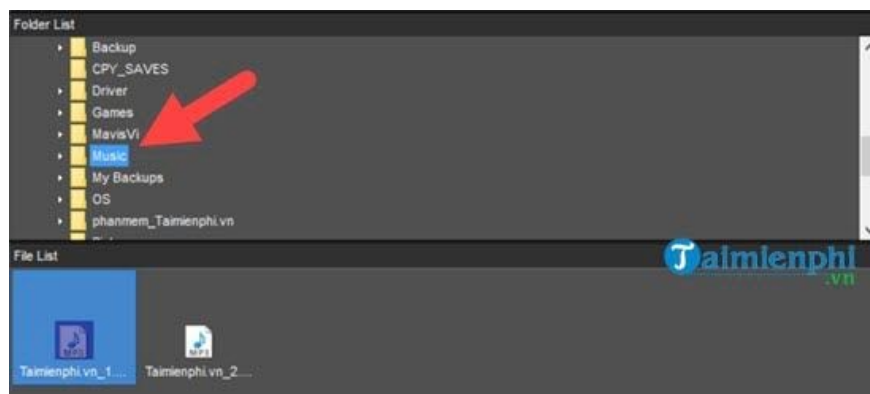

Step 8: Besides adjusting the effects for individual photos, we can also adjust the effects for the entire **template** video using **Effect FX**.

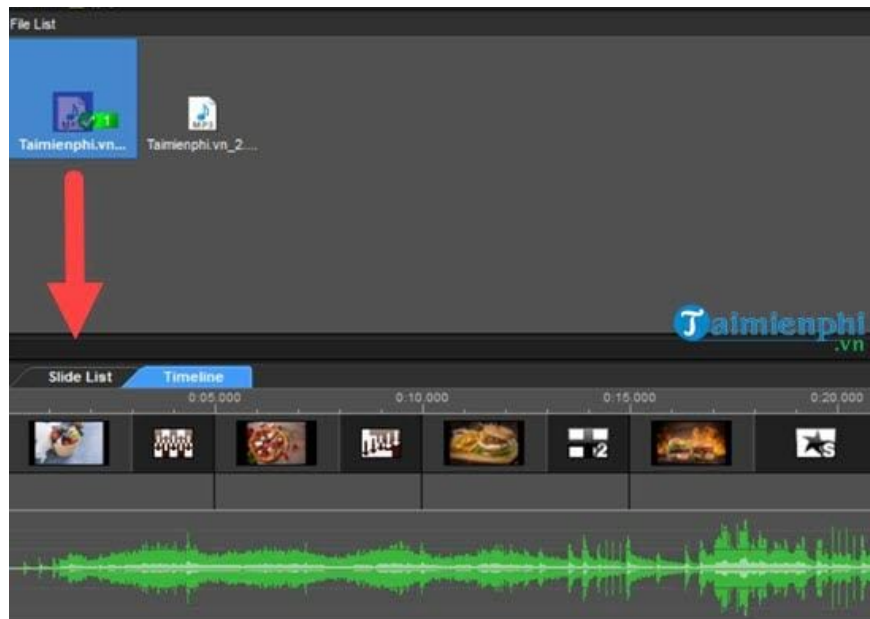

Step 9: Here, simply select **any effect** and assign it to the desired effect. Creating a video from photos is almost complete.

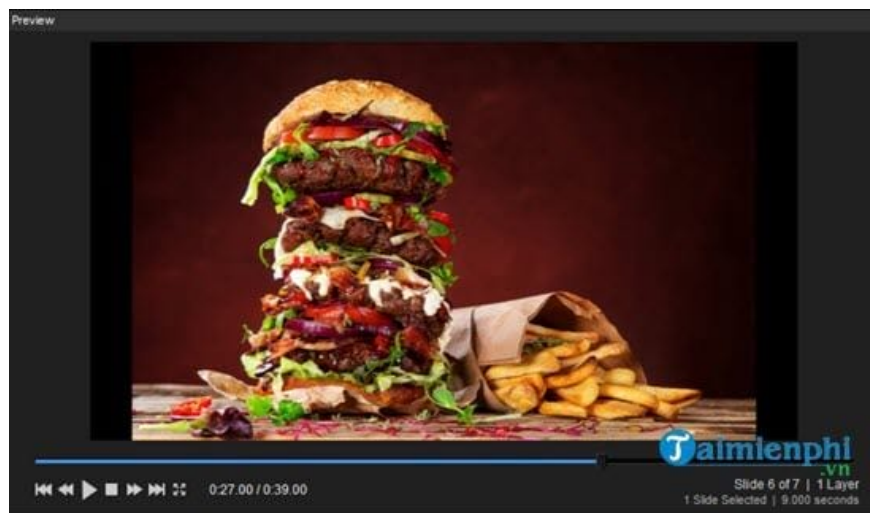

Step 10: You're almost there! Now you need to add some music to your video. Locate the folder containing your songs.

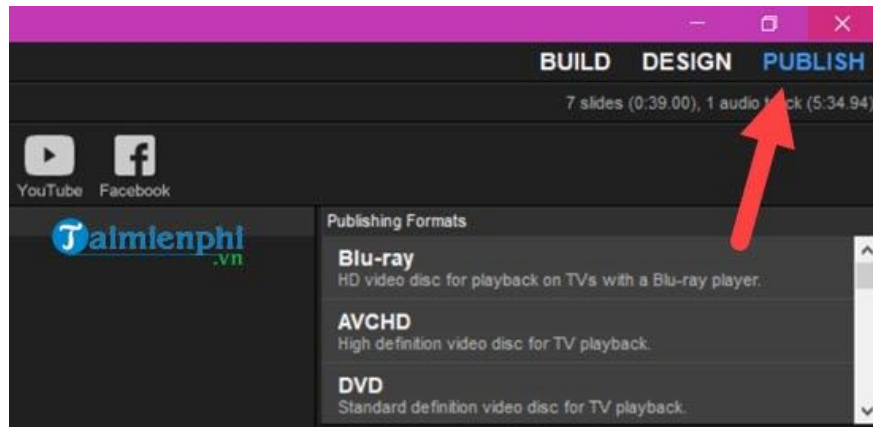

Step 11: Similar to the image, we just need to drag and drop it onto the Timeline to make the music play in sync with the image.

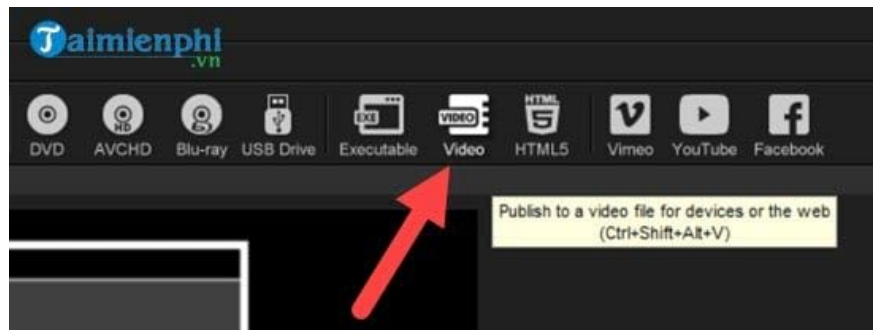

Step 12: Finally, review your entire video to see if there are any further edits or changes needed before exporting it.

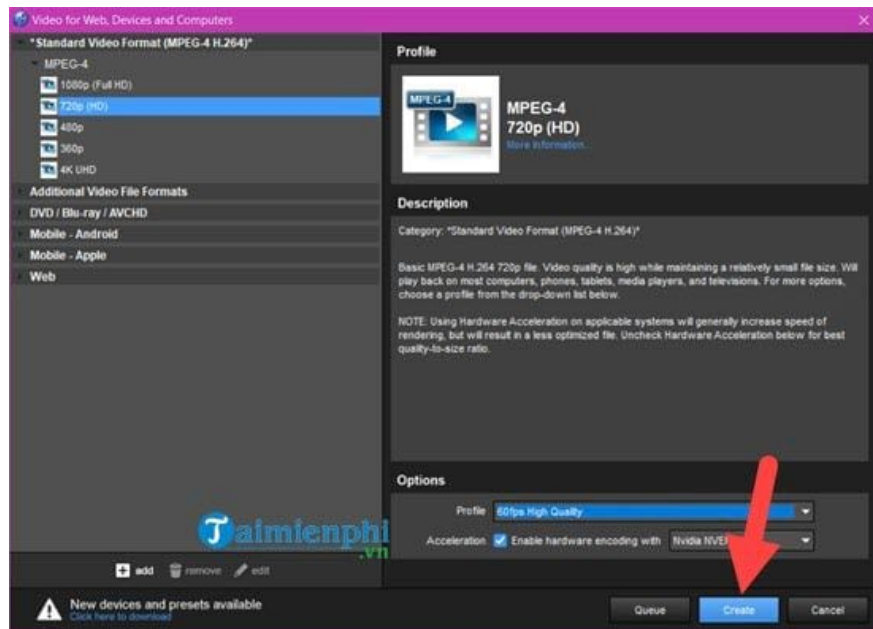

Step 13: To export, select the **Publish** option in the upper right corner.

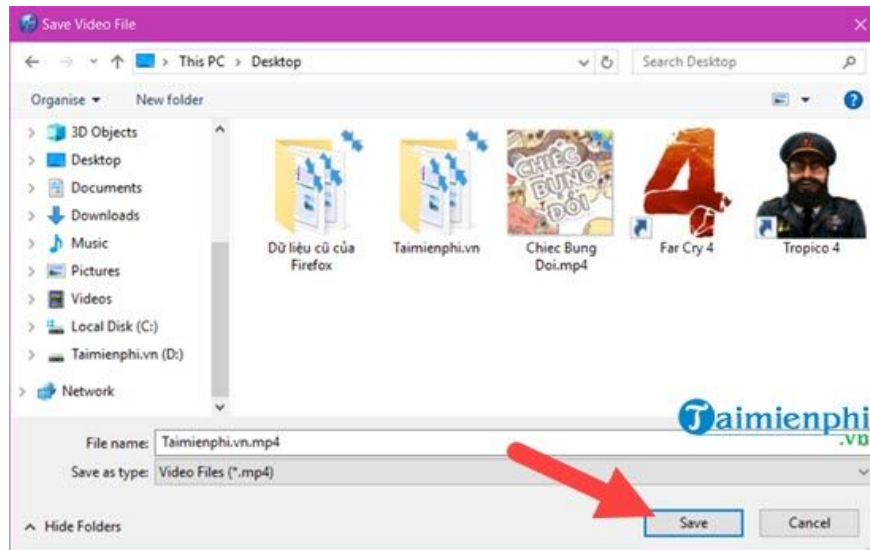

Next, select the video icon to export; this is a common video export method in ProShow Producer.

Step 14: Choose the desired video output resolution. This will depend on your image resolution and your preferences. Once you've made your decision, click Create.

Finally, name the file and click save, and you're done! That's the simplest way to create a video from photos.

Above is a guide on how to create a video from photos in the simplest way. TipsMake believes that although the article is a bit long, the steps are completely simple, and users can easily follow the steps to create a complete video themselves, or even more creatively if they are already proficient in using ProShow Producer.

For non-professionals, creating videos from photos using ProShow Producer is a simple and effective starting point. This method is not only used by beginners but also by professionals and semi-professionals alike .

But that's for Windows users. So, what options are there for Macbook users to create videos from photos on their Macbook? If you're wondering about this, check out [How to create videos from photos on a Macbook](#) for detailed instructions.
