

Detailed instructions on how to install Windows 7 for beginners

For many people, installing Windows on a computer is a very complicated process. But with the following instructions, installing win is as easy as eating candy even if you do not know how to install it.

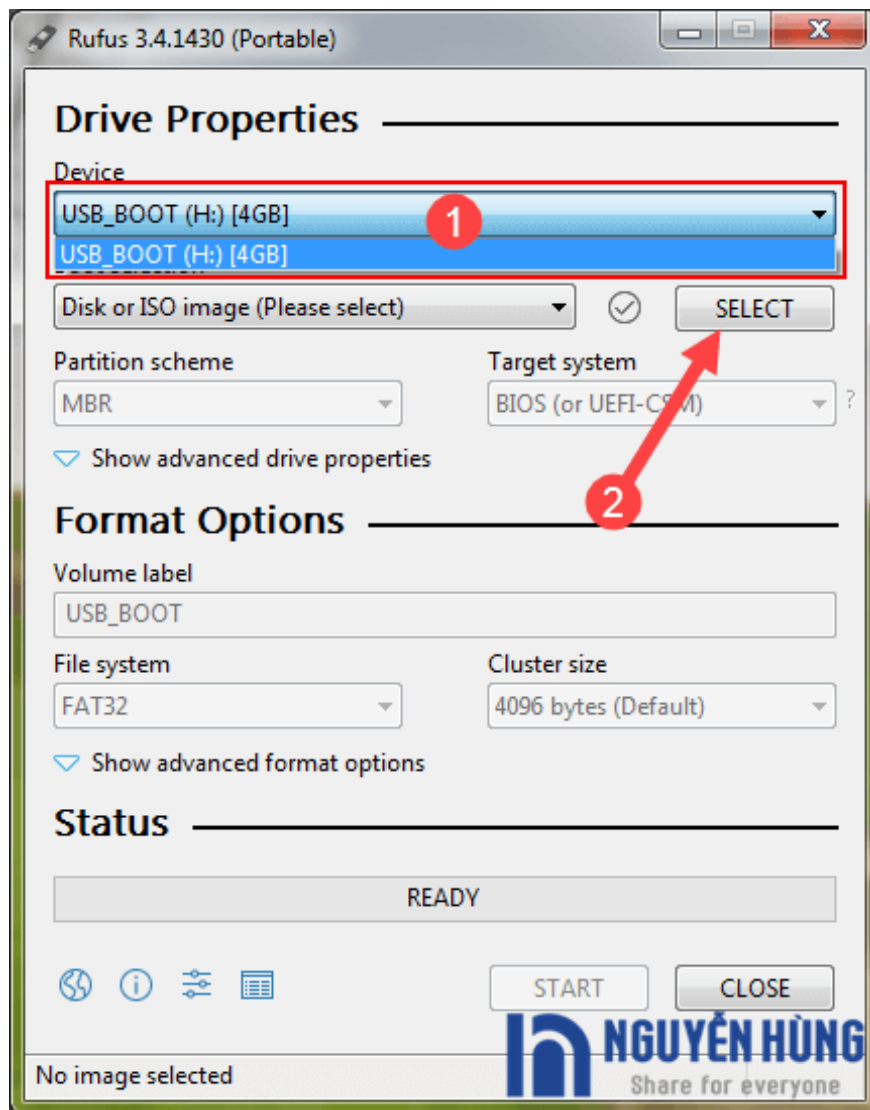

First of all, to install Windows 7, you need to make sure your computer configuration meets the following requirements: have a CPU processor of 1GHz or higher, at least 32-bit RAM version at least 1 GB and 64 bits must be on 4Gb, similar to a hard drive capacity of 16 GB or 20 GB, has a graphics card that supports DirectX 9 with WDDM 1.0 or higher.

Below is the detailed installation procedure

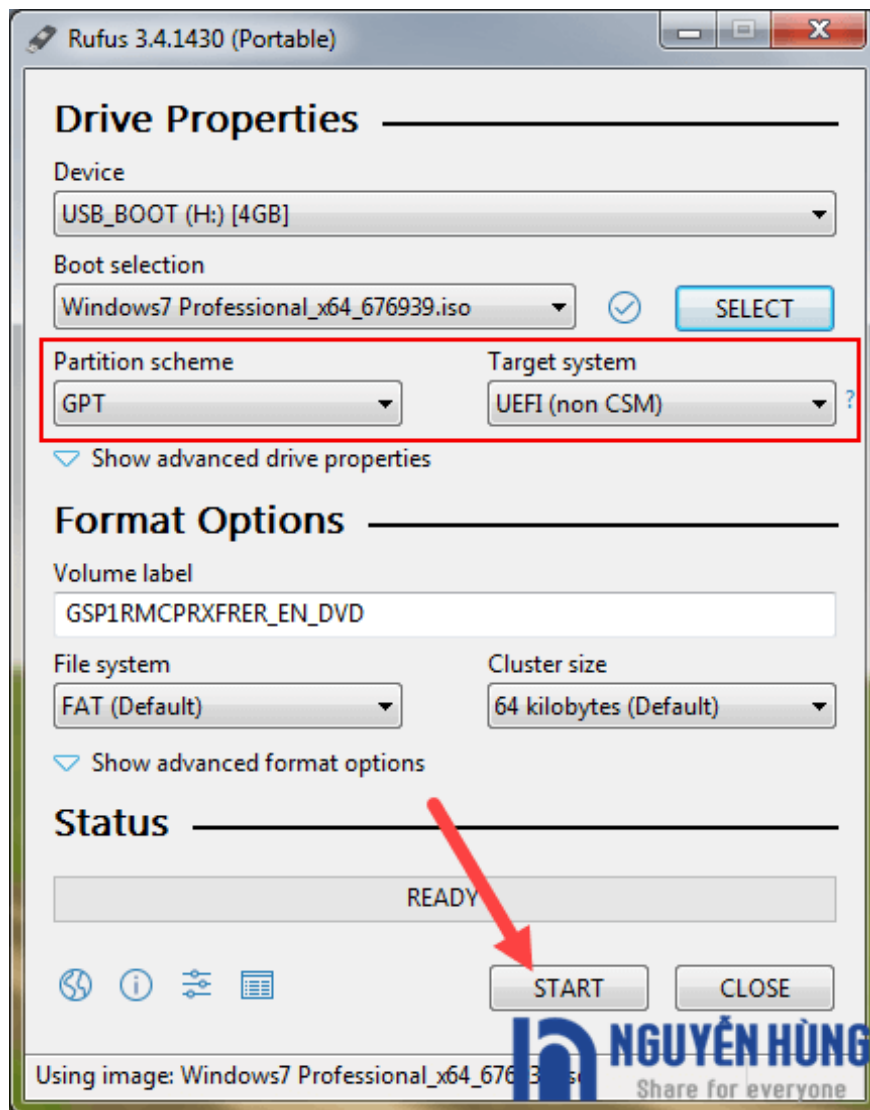

Step 1: Create a USB Boot to install Windows 7 with Rufus software (Rufus download link [here](#))

To create the appropriate USB Boot, you need to determine whether the computer hard drive is running in MBR or GPT format. Then, connect the USB to the computer and open the Rufus software - after turning off the antivirus software.

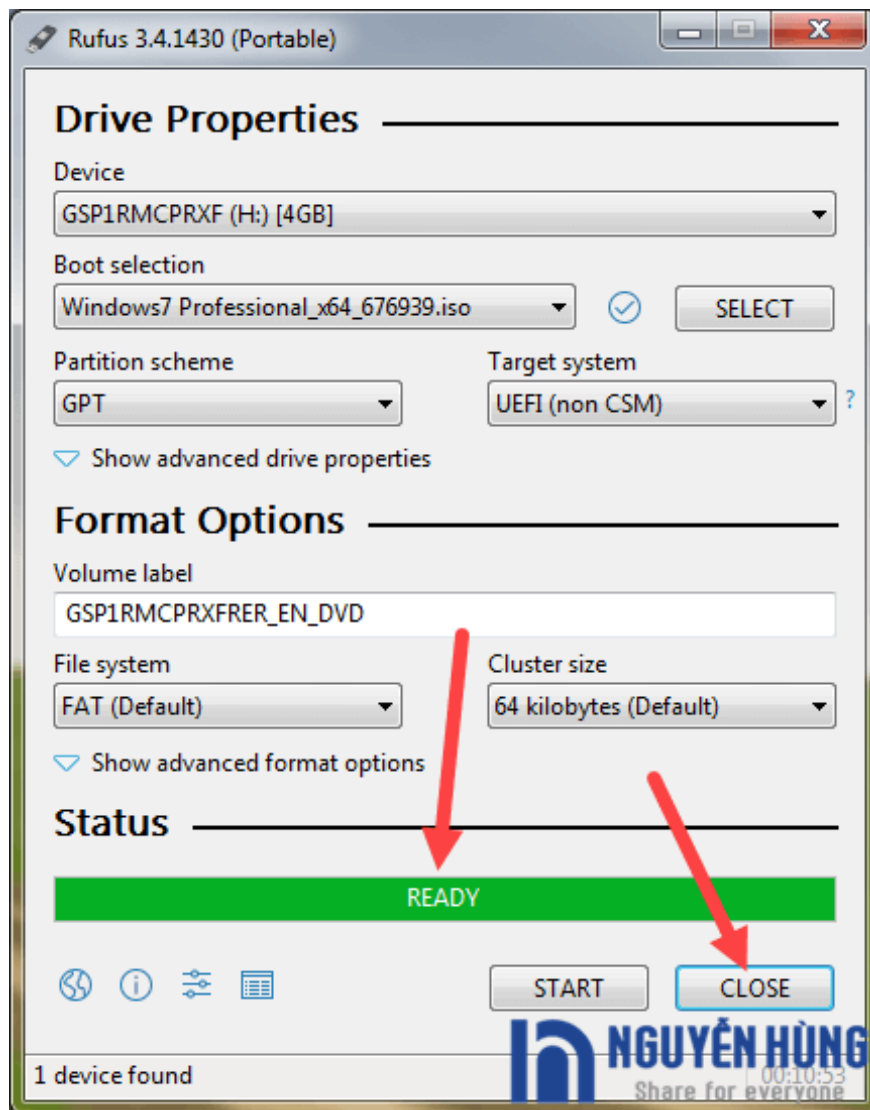

Click on Device and choose the name of the USB to create Boot. Click Select and find and open the Windows 7 .ISO file.

Continue to select Partition scheme, select MBR or GPT and the appropriate boot will be automatically selected.

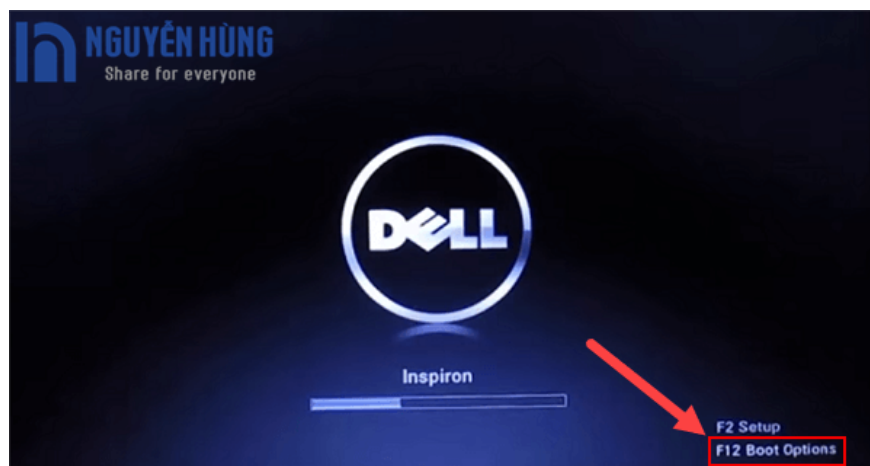

Proceed to create USB Boot by clicking on Start, click Ok through the warning and wait for 5-7 minutes. Then select Close to close the software.

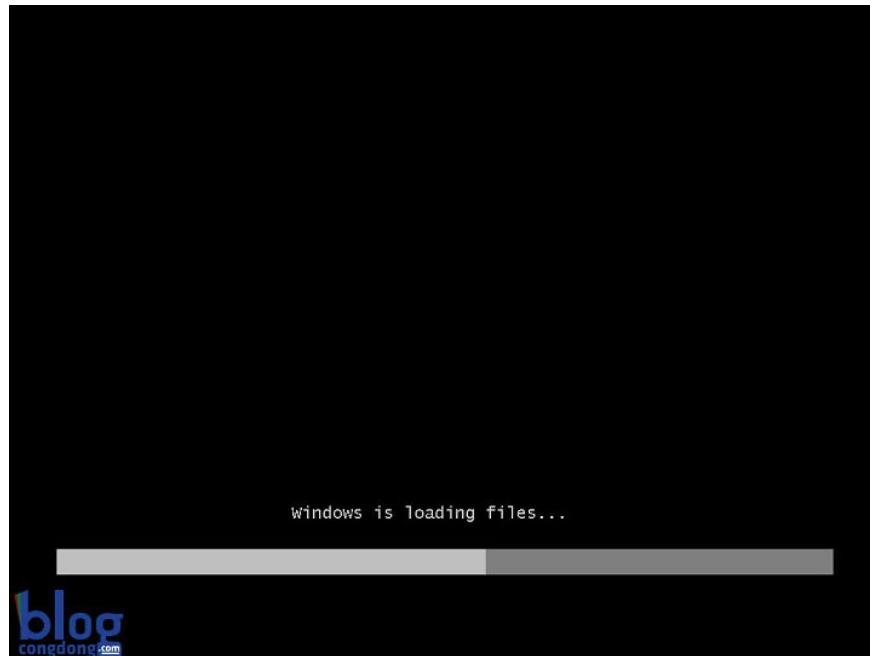

Step 2: Boot the computer into USB Boot

Start the computer on which you need to install Windows, and press and hold the Boot Options key.

When Boot Options appears, use Enter and the arrow keys select the Boot device, pay attention to the items with the word USB. The screen will appear as follows

Step 3: Install Win 7

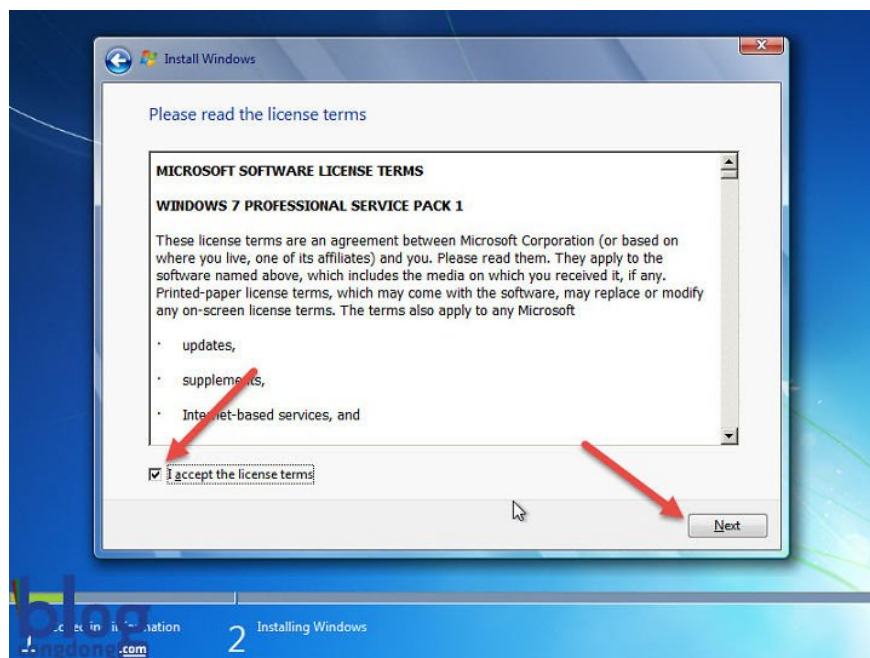

After waiting, the screen will appear as follows. All you have to do is select Next and go to the Install Now step.

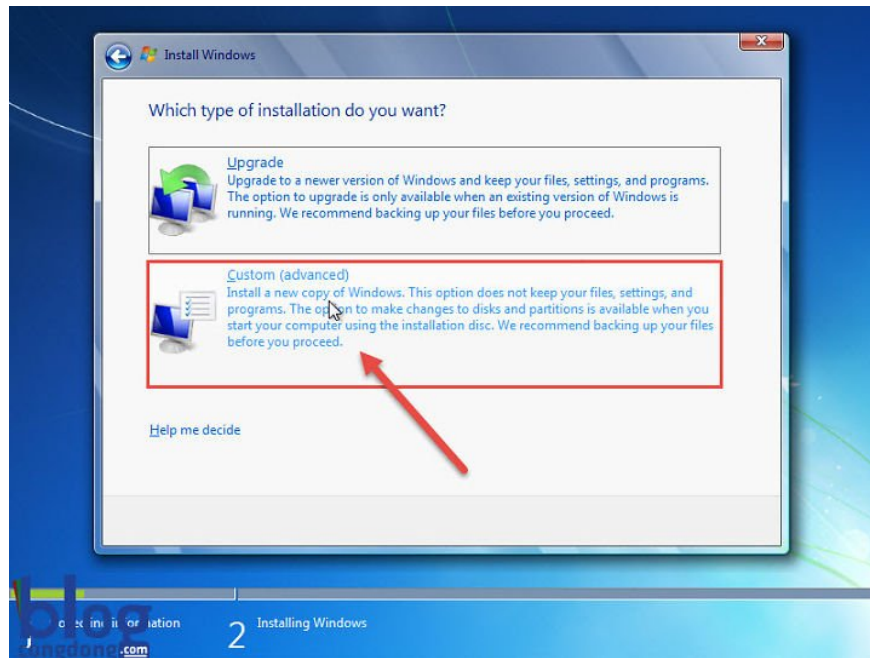

Select the version you want to install and continue forwarding.

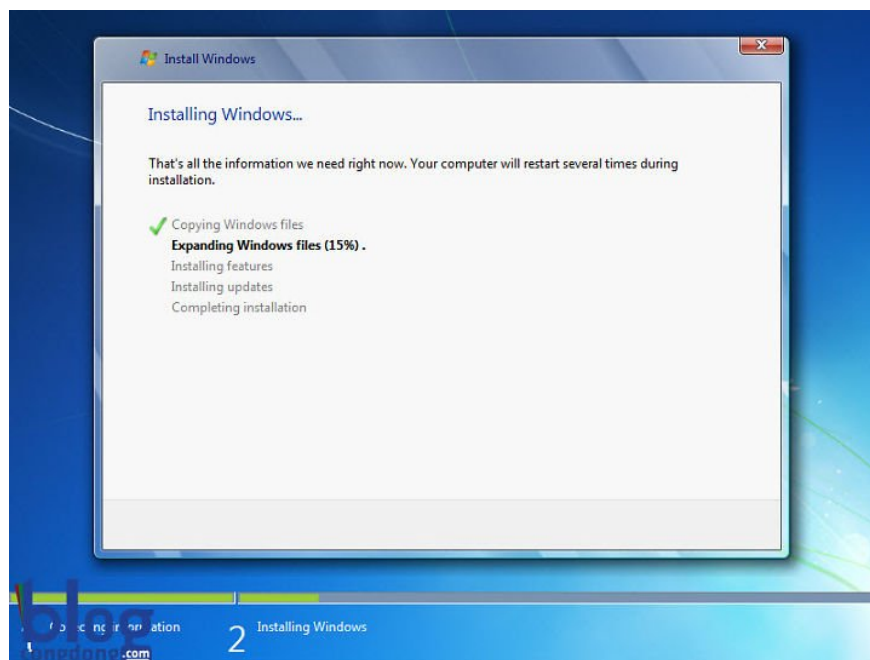

Agree to the terms I accept the license terms and Next.

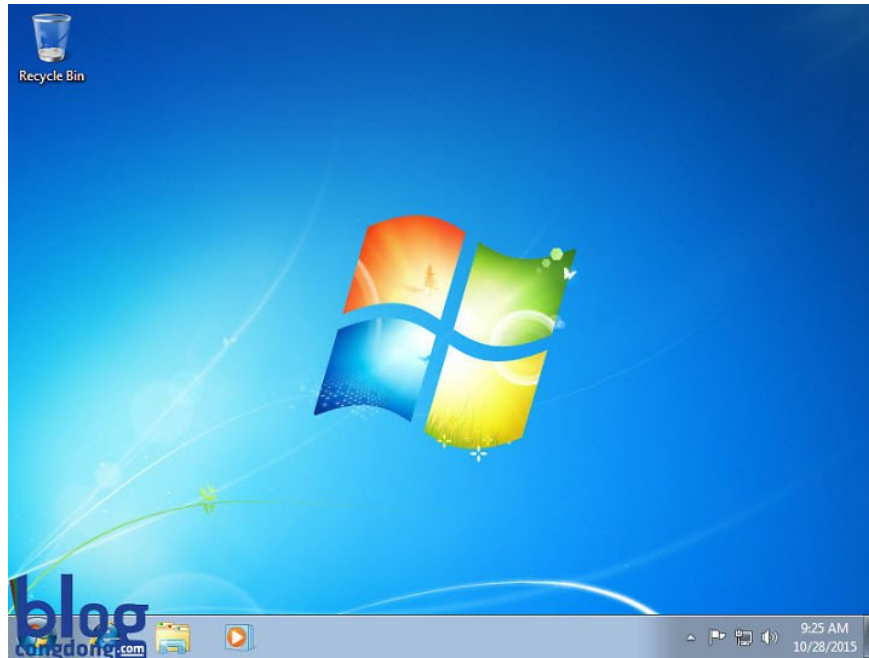

Select the Upgrade installation if you want to upgrade from low-level versions and Custom (Advanced) for the new version completely.

Select the drive and click Drive options (Advanced) and Format, click Next.

You will take a while and then select items such as usernames, password settings or computer time.

Step 4: Install the driver for the device

If the installation is completed, your computer does not receive the full driver, then you should use another computer to download the driver. Go to Google to search for the keyword 'driver + hostname (mainboard name)' and visit the company's homepage to download the driver.
