

# Detailed review of iPhone 7 to iOS 14.4

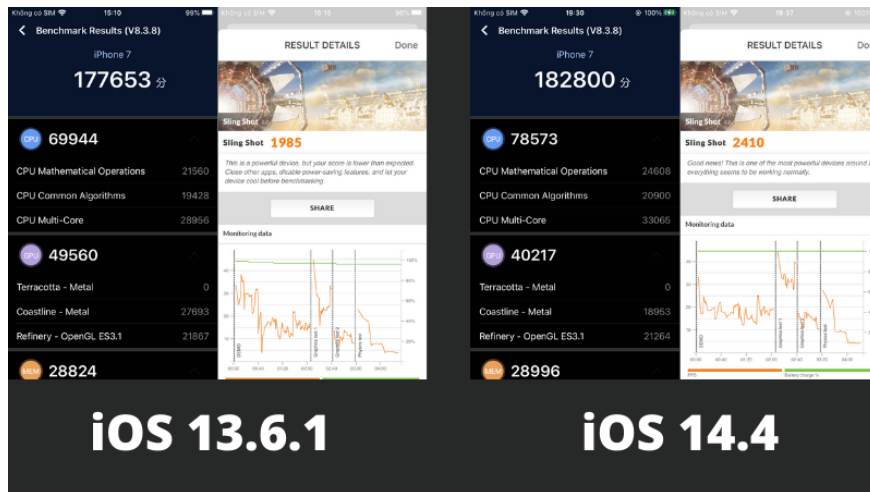

A week ago, Apple officially launched the iOS 14.4 update for iPhone devices from iPhone 6s to iPhone 12 Pro Max. In this iOS update, Apple promises to fix a few small bugs as well as add interesting new features.

So what will the iPhone 7 look like when updating to iOS 14.4? Please read the article detailed review iPhone 7 to iOS 14.4 below offline.

## 1. Is performance on iPhone 7 on iOS 14.4 improved?

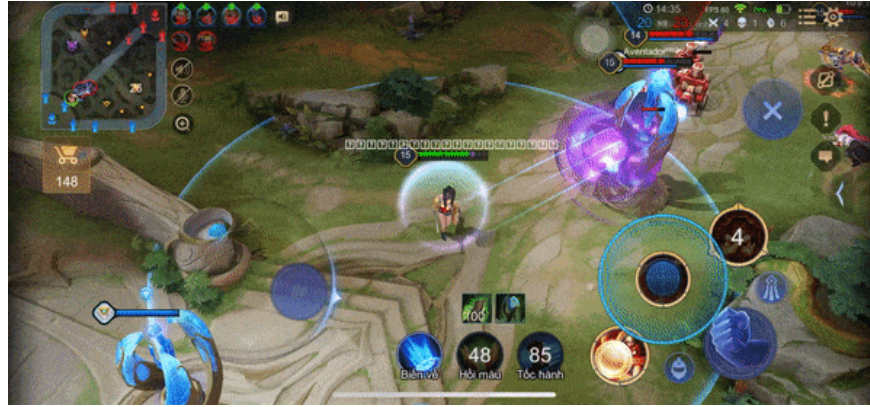

In this section, I will compare the performance of the iPhone 7 when in iOS 13.6.1 and when to iOS 14.4 through two ways, which are benchmark scores (AnTuTu Benchmark and 3D Mark) and real gaming experience. health.

The first is the score, with the software AnTuTu Benchmark, I got the results as shown below. As you can see, the score changed slightly from 177,653 to 182,800 (an increase of more than 5,000 points). As for the 3D Mark app (in the Sling Shot test), our iPhone 7 when updated to iOS 14.4 also had a slightly improved score compared to iOS 13.6.1, specifically from 1,985 to to 2,410.

Of course, the number cannot say all, so I will play the experience of 3 titles: Lien Quan Mobile, Call of Duty and PUBG Mobile on the iPhone 7 (in both iOS 13.6.1 and iOS versions. 14.4). Thanks to that, it will help you easily compare whether the performance of the iPhone 7 is better after updating iOS 14.4 or not. Details about the FPS chart, the adjustable graphics level in each game, I will in this link .

With Lien Quan Mobile, after updating iOS 14.4 for iPhone 7, the graphics level that I can adjust will still be the same as before I updated, there is no significant change. But the average FPS is in the range of 30-40, while the average FPS in iOS 13.6.1 is 60.

This is not too confusing because the iPhone 7 is an old model, the more iOS is updated to a higher version of iOS, the performance will decrease a bit. The Lien Quan gaming experience on the iPhone 7 is also affected a bit when the lag occurs more often.

Going to the next game Call of Duty, my iPhone 7 is not showing very well. Specifically, before in iOS 13.6.1, iPhone 7 when playing Call of Duty has a FPS fluctuation in the range of 50-60 FPS. But after the update, my iPhone 7 can only play at 30 FPS.
