

Details of the plan to turn a successful Mars man for only \$ 100,000 by Elon Musk

At the 68th International Astronomy Conference (IAC) in Adelaide (South Australia), billionaire Elon Musk gave a speech about his Mars colonial detailed plan starting from now on. until 2014, the official time to bring people to the Red planet.

At the 68th International Astronomy Conference (IAC) in Adelaide City (South Australia), billionaire Elon Musk gave a speech about his Mars "colonization" detailed plan starting from now until 2014, the official time of bringing people to the planet Red.

1. How does Elon Musk send people to Mars?
2. Watch Elon Musk's presentation on the plan to conquer Mars

In a speech that lasted over an hour, Elon Musk made it clear, his highest goal and SpaceX were: "*Take people to Mars for only (even) less than \$ 100,000!*".

We watched South African billionaire and SpaceX had to prepare specific plans to fulfill the dream of conquering Mars.

The content of Elon Musk's presentation on the topic of **Developing a plan to put people into Becoming a multiplanet species** .

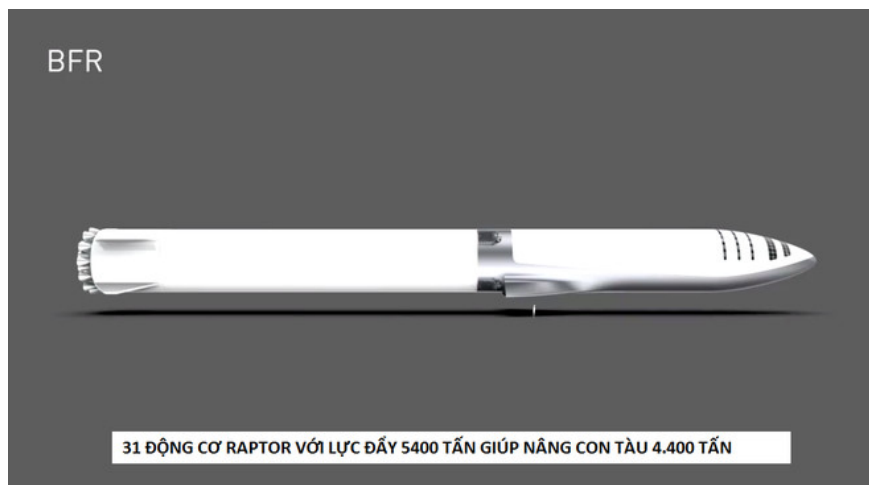

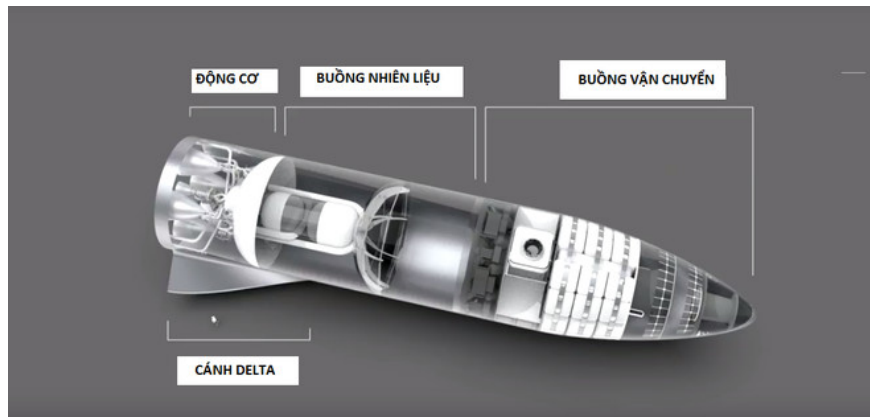

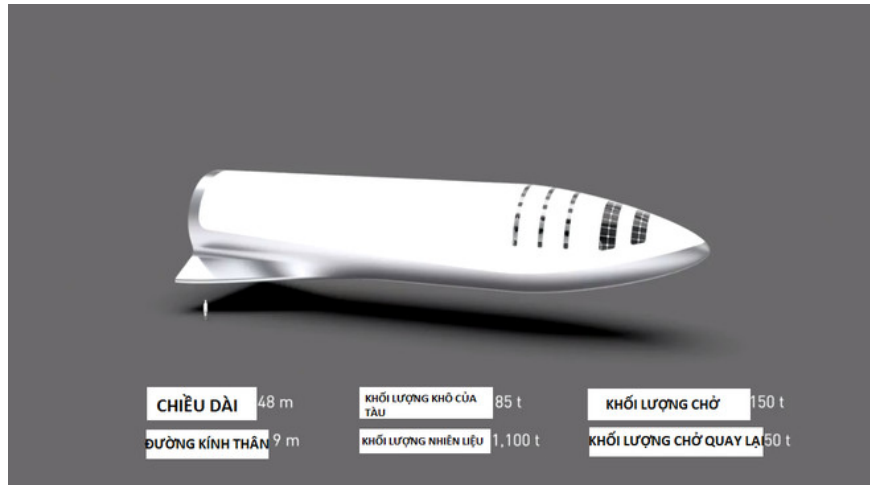

Part 1: "Super terrible" rocket engine for conquering Mars

In the first part, Elon Musk introduced a series of engines, spaceships and missiles for the mission to conquer Mars in the next decade.

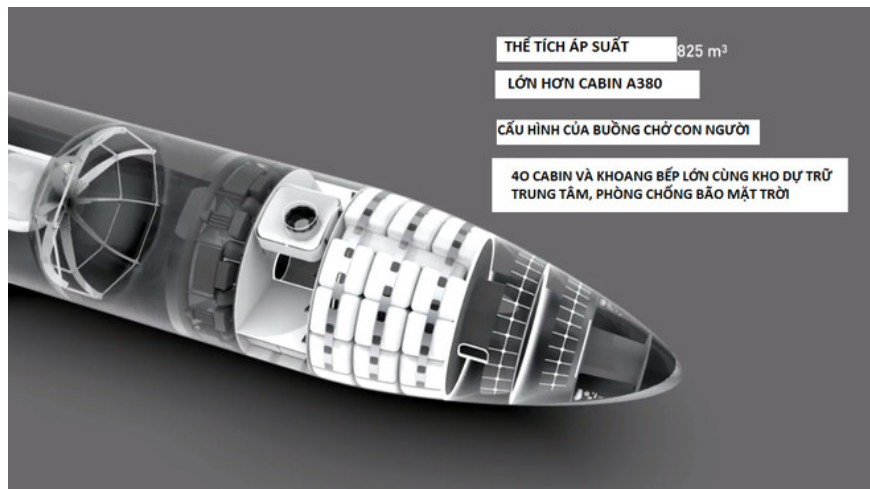

In particular, Musk introduces in detail the construction of the super giant rocket (BFR), the "key" to help people move to the Red planet.

1. The whole body of BFR.

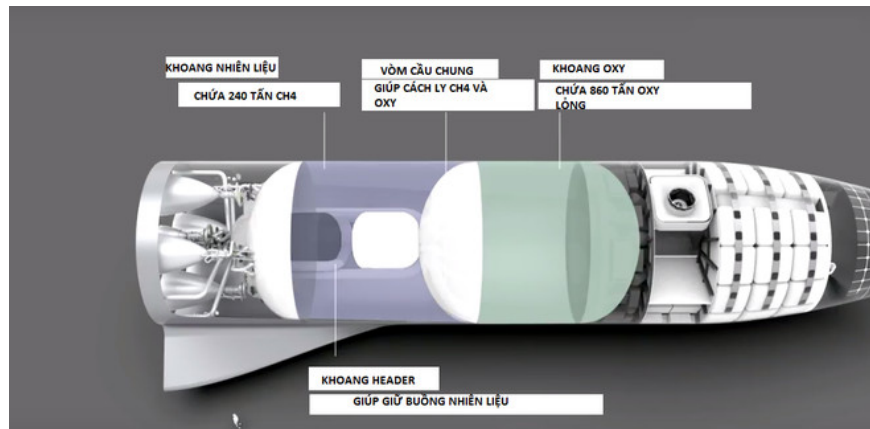

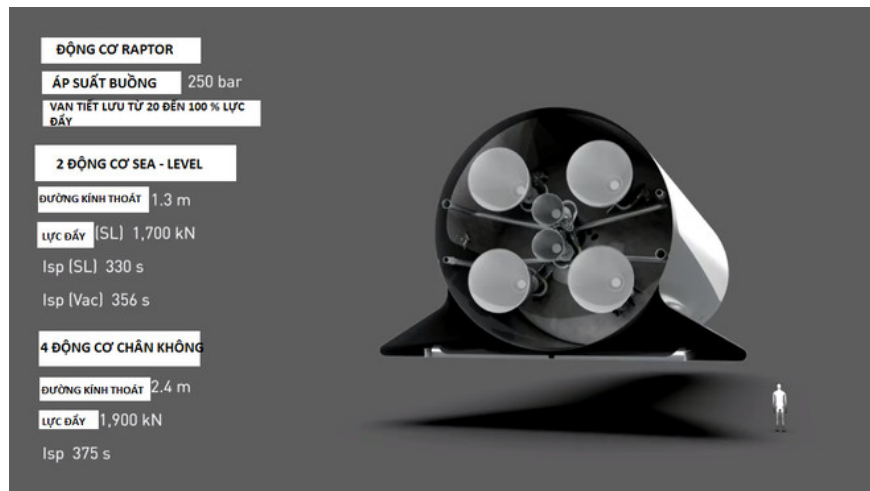

2. BFR header construction.

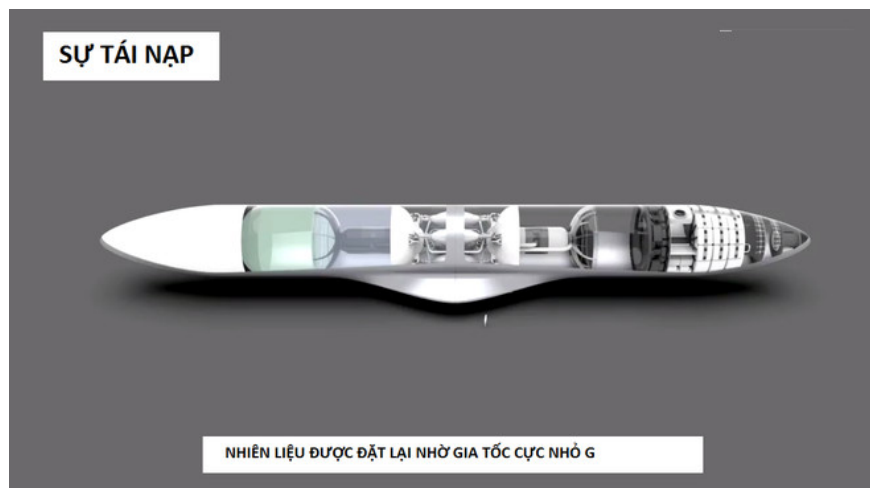

3. Structure of BFR body.

4. Structure of BFR tail.

5. BFR refueling process.

Elon Musk also added that BFR is a very versatile super rocket. In addition to bringing people to Mars quickly, it can be used to clean up "cosmic" garbage, launch satellites and support ISS International Space Station. And just another year, BFR will land on the Moon to build a base station.

Part 2: Building an important "Moon Base Alpha" base on the Moon

Billionaire Elon Musk also introduced an important base to be built on the Moon called "Moon Base Alpha". This is a "pedal" base to create a leap for astronauts to set foot on Mars in the near future.

The Earth is 78 million kilometers from Mars, with such a long distance, building a base on the Moon (384,400 km from Earth) is an important strategy. This will be the last refueling place to get people flying to Mars.

Part 3: Mars "colonization" plan

Elon Musk believes that Martian citizens will become increasingly crowded over time.(Cut from video.)

Elon Musk believes in his plan to conquer and master Mars. This plan is divided into 2 main phases with 2 clear objectives:

1. 2022: 2 cargo ships will be launched to the surface of Mars. The brave people who first set foot on Mars will search for water, identifying hazards in this remote land. After that, they will exploit mining and energy resources, build infrastructure on this planet to wait for people to live.
2. 2024: First Earth citizens will be moved to Mars to live on two airships. Along with that, the goods, necessities and equipment needed for new life were also transferred on two other spacecraft.

At the end of the lecture, Elon Musk introduced to the whole conference a 1-minute-long video demonstrating how SpaceX's giant rocket will move quickly in the future. At speeds of up to 27,000 km / h, this missile can travel from one continent's city to another continent's city in less than 40 minutes.

Conquering Mars is an ambition not only for Elon Musk, but also for NASA and China to plan for "colonization" of the planet.

Will Elon Musk succeed with this plan and become the first person in history to bring people to Mars? Please wait for future answers.
