

## Detecting strange objects like alien coffins on Mars

Analyzing photos taken by NASA, alien hunting expert Mister Enigma said that the 'strange object' looked like a coffin containing mummies in Egypt.

Alien life hunters have discovered a new sign on the Red Planet from photographs taken by the US Space Agency (NASA). Accordingly, some people claim to see a "strange object" like a coffin containing mummies in Egypt.

Expert hunting aliens Mister Enigma even made a video to prove that strange objects appearing on Mars are likely to be coffins of aliens.

He said: "If we enlarge the image of NASA taken by the Curiosity Rover Mars discovery vehicle, we will immediately see a coffin containing a mummy as if lying on a cliff, shaped like a mandarin. treasure of ancient Egyptians. "

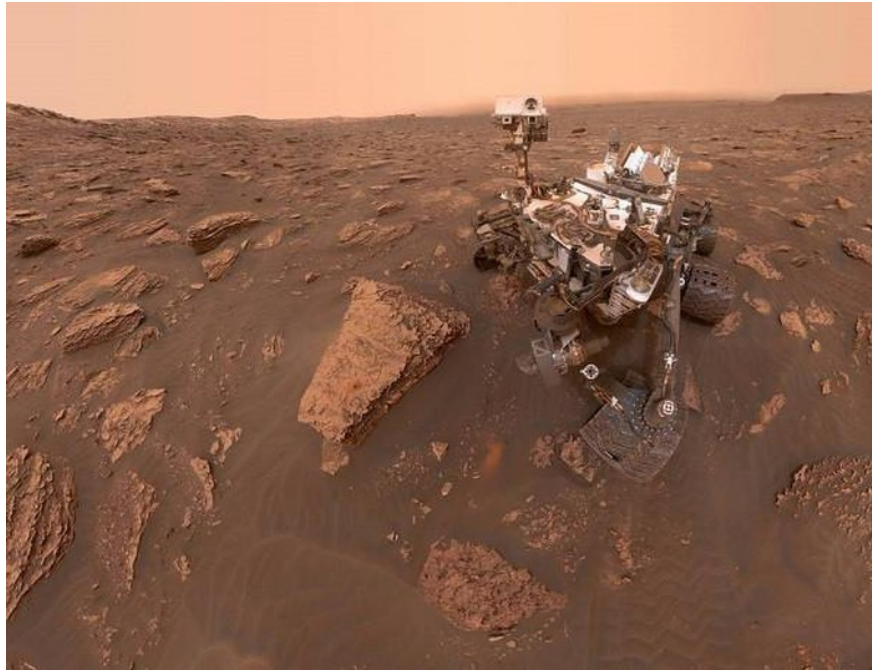

In a second video posted, Mr. Mister Enigma mentioned a picture of two weird faces carved on the cliff of Mars, opposite the strange Egyptian mummy. "Is this an alien burial ground?" He questioned.

The incident has caused a lot of controversy, some people claim that Mr. Enigma edited the photo of NASA during the analysis. While many people completely believe that this is the burial area of ??ancient aliens.

Later, however, scientists rejected Mr. Mister Enigma and thought that this was simply the result of pareidolia.

This is the phenomenon of seeing familiar objects even though they are not.

This psychological reaction often occurs because the brain automatically associates images stored in the head with objects with similar strokes and makes us believe it's true. In this case this may be just a ledge, not an alien's coffin as rumored.

Earlier, the discovery of strange objects on Mars shaped like faces, human bones or animals was not uncommon.

In 2014, the image of the Martian surface with similar objects . the human thigh bone caused witnesses to `` creepy hair ". Many ideas that this is a fossil from civilization has disappeared, but according to NASA may be this rock has a strange shape due to erosion.

Another "strange object" is thought to resemble a sculpture of ancient Mesopotamian civilization, taken by the Opportunity self-propelled boat taken in 2010.
