

# Developing a new type of sausage can reduce the risk of colon cancer

Recently, a group of European scientists are working to produce a type of sausage that can reduce the risk of colon cancer.

While the world is stunned by the discovery of sausages made of dirty meat and its preservatives that can cause cancer, recently a group of European scientists are making production. A type of sausage can reduce the risk of colon cancer.

Now the details of this new type of sausage are kept secret, only known to include **clean meat, some vegetables and berries** .

The scientists say that clean meat is a problem that can limit the current cancer of dirty meat (including flukes, ecoli bacteria, meat growth toxins). Next, the vegetables and berries in this new sausage will also be an important source of essential nutrients (including proteins, vitamins, minerals) to help reduce the aging process as well as reduce the risk of cancer. colon.

" *If this hypothesis is proven correct, this new type of sausage will indicate that the risk of colon cancer can be reduced by a clean packaged sausage food, nutritional value, and new medicine. from meat, fruit and vegetables* ' . Ms. Eva, Tornberg at Lund University, Sweden.

*In Sweden, colon cancer is the most common disease with about 5,000 cases a year (Photo: ScienceAlert)*

Eva and colleague Tornberg have been implementing, researching and finding solutions to produce products made from safe meat for the past few years, they have been supported and funded by the European Union. support for projects.

This super-clean, super-healthy sausage is still in the pre-development stage, scientists will continue to study the compound, then produce a complete product and test it on animals.

If the results are successful, this new type of sausage will be quickly launched in the next few years.
