

Discover beautiful white elk from head to toe like stepping out from fairy tales

Photographer Hans Nilsson was fortunate to record the image of a great white moose from head to toe, even his gauze wrapped in white velvet when it was wandering in the Värmland region of southwest Sweden.

Photographer Hans Nilsson was fortunate to record the image of a great white moose from head to toe, even his gauze wrapped in white velvet when it was wandering in the Värmland region of southwest Sweden. . The images of this extraordinary and extremely rare moose quickly attracted the attention of the network community.

1. Scientists have discovered 3 new species of snow leopard
2. Extremely rare albino snakes found in Australia

Hans Nilsson had to wait three years for the opportunity to record the image of this beautiful deer as he swam across the river to enter the pasture.

Most elk are only dark brown, very few and extremely rare white ones. In particular, although the elk's whole body is white but caused by the mutation of an excess gene, which is intended to create white hairs on the deer's body.

In 2012, a group of tourists was also fortunate to meet such a deer in the Värmland area.

Goran Ericsson, a Swedish biologist, said the white elk appears more and more, suggesting that their numbers are increasing.

Elk in Scandinavia have very few enemies in the wild, and hunters in Canada who are banned from killing elk have more than half the white coat. This may be the cause of increasing the number of white deer.
