

Discover outstanding technologies applied on Beko water heaters

In this article Quantrimang will introduce you to the outstanding technologies used on the Beko heater. Let's check it out!

Beko water heater, in addition to owning luxurious and modern design, is also applied many advanced technologies to bring interesting experiences to users. In this article **Quantrimang** will introduce you to the outstanding technologies used on the Beko heater. Let's check it out!

I. Which country is Beko water heater?

Beko was founded in 1967 in Turkey, specializing in the production of household products such as air conditioners, refrigerators, washing machines, ovens, microwaves, electric rice cookers, irons, water heaters. .

Quality control in Europe is always higher than other countries, so Beko products have a certain position with consumers all over the world thanks to quality and product design.

In Vietnam market, Beko water heaters are manufactured in Malaysia to ensure compliance with European quality and equipped with many new technologies so users can be assured of products.

II. Featured technologies on Beko water heaters

1. ELCB sensor against electric shock

With the ELCB sensor, you won't need to worry about the heater being leaking electricity, harming family members. The machine will automatically disconnect the power if it detects a leak, safeguards you and your loved ones from the risk of electric shock.

2. Water flow sensor avoids dry burning

Beko water heater has integrated water flow sensor, only allows the heating unit to operate when the water flow rate is over 2 liters / minute, you will be more secure during use.

3. High quality case, IP25 waterproof

High-quality, heat-resistant and slow-burning case design not only ensures the durability of the machine but it is also extremely safe when a fire or explosion incident occurs.

Moreover, the shell made of special material, capable of waterproofing IP25 standards will prevent dirt and water from splashing into the machine, causing internal components damage, improving the life of the family's Beko water heater .

4. Dual anti-burn heat sensor

What if the hot water output suddenly becomes overheated, can cause burns to the skin when using hot water? Equipped with dual thermal sensors, the Beko water heater has the ability to automatically disconnect the power, preventing you from using it when the water temperature becomes too hot. Thus, the skin of your whole family will be protected completely.

5. 5-spray shower mode

Some models of Beko water dispenser are equipped with a shower, designed with up to 5 modes including: Powerful spray, gentle, standard, combination and massage that allow you and your loved ones to choose the appropriate spray. Your needs in the process of use, bring the most relaxing, ideal and wonderful moments.

6. Power pump

Beko also has a water heater with a booster pump to support the flow of water in the shower stronger, bringing a more comfortable bathing experience. In addition, in areas with weak water, the booster pump will support very well so that the water output is stable.

III. Top best selling water heaters today

1. Water heater Beko BWI45S1N-213 - Reference price: VND 2,200,000 VND

Beko BWI45S1N-213 belongs to the direct heating line. The machine operates with a large capacity of 4500W, which helps to bring hot water quickly without having to wait long.

The product has an extremely luxurious modern design. Not only does it bring the convenience of hot water, the bottle also helps the bathroom of each family add a level.
