

Discover the HP Mini 1001TU 'black jewel'

Impressive about the HP 1001TU is not only a compact, fashionable appearance, but also in a large keyboard that is not inferior to a regular laptop.

Impressive about the HP 1001TU is not only a compact, fashionable appearance, but also in a large keyboard that is not inferior to a regular laptop.

The design of this netbook somewhat reminds users of Sony's "super-product" Vaio P, with a width of 1.5 times the width. Thus, the keyboard of the computer is not as cramped as in most other mini laptops that are very spacious and comfortable, with large buttons, designed to overflow the sides to maximize the surface area. face. Editing text on this netbook will give you a pleasant feeling. Therefore, it can be confirmed that the keyboard is one of HP 1001TU's biggest advantages when compared to rival netbook lines.

With the aim of being a high-end, demanding customer segment not only in terms of operability but also in appearance design, HP has taken care of the look of this netbook. That shows right in the plastic shell, when applied Imprint sinking printing technology like in the Pavilion laptop series, bring the motifs and patterns very impressive. The entire body is a uniform black, with rounded corners and curved edges, so the new 1001TU has a nickname that sounds pretty "black pearl".

The keyboard is designed to overflow on the sides, with large buttons.

The Wi-Fi on / off and on / off switches on and off of this device are also designed "unlike anyone". Not only are they located in a rather strange position, the front edge, they also operate according to the transverse mechanism, rather than press the button as in the usual laptop series. When turned on, the signal lights emitted from these two switches also contributed to the very own charm of HP 1001TU.

Above the keyboard, in place of the hinge, HP equips his "black jewel" with a silver speaker system made of shiny metal. The sound quality of this speaker is quite high compared to the average level of netbooks, with high volume, enough for users to relax with music in a room not too noisy.

Below the keyboard is the touchpad (touchpad) which is designed to be large and wide, with two left mouse buttons, the right mouse button is on both sides and the touchpad on / off key is just above. This is another advantage in the design of HP 1001TU, because the touchpad surface is not only wide but also quite smooth, helping users to move their fingers easily. In addition, it also supports horizontal and vertical scrolling.

Wi-Fi turn on / off and on / off switches are designed to be horizontal, located on the front edge.

The screen that HP used to produce this netbook is a mirror screen, but it is covered with an anti-glare layer that can still be used outdoors. With a 10 inch wide diagonal and 1,024 x 600 pixel resolution, the HP 1001TU screen has a high display quality and supports the basic functions of a netbook such as email, web surfing or handling office application.

At the top edge of the screen, HP equipped 1001TU with a webcam for video chat or teleconferencing, but the image quality of the webcam was not high, the image was often dark. Compared to another 10-inch netbook, Lenovo's IdeaPad S10, the quality of the HP 1001TU webcam is not equal.

The ports of the device are located on the sides, including two USB ports, an Expansion Port, a memory card reader, a shared microphone and headphone port, an Ethernet port and a port used to lock machine. Like most netbooks, HP 1001TU is not equipped with an optical drive.

HP 1001TU satisfies user requirements.

In terms of configuration, it is equipped with Intel Atom N270 1.6 GHz processor, 1 GB RAM, 60 GB hard drive and pre-installed Windows XP operating system. Overall, this is a pretty good configuration compared to the current netbook. This configuration allows the machine to handle the basic tasks that users wait for in an auxiliary laptop. The battery of the device is capable of operating continuously for nearly 3 hours.

In summary, with many highlights in the design, plus a relatively high configuration compared to the netbook common ground, the price of 555 USD offered by HP to 1001TU in Vietnam market can be considered a fairly competitive price at current time. This promises to be a great gift for the charming and dynamic women on the upcoming March 8.

Advantages :

- Spacious, comfortable keyboard with large buttons
- Impressive shell design and impressive, round body shape
- High configuration compared to netbook common ground

Disadvantages :

- Webcam for not high image quality
- Must use jacks for microphones and headphones.
