

## Discover the interior of the iPhone Xs

Along with 'pecking out' and see what's inside the Apple iPhone Xs, how the components are arranged and what's different from the iPhone X.

Along with 'pecking out' and see what's inside the Apple iPhone Xs, how the components are arranged and what's different from the iPhone X.

The iPhone Xs still has an L-shaped battery and, compared to the battery on the iPhone X, is more seamless. iPhone Xs is equipped with a battery of 2,658 mAh capacity, smaller than the iPhone X (2,716 mAh).

iPhone X

iPhone Xs

Compared to the iPhone X, the iPhone Xs motherboard is a bit different. The motherboard of the iPhone Xs with the main component of the world's most powerful Apple 12 Bionic mobile processor is extremely compact and delicate.

The camera of the iPhone Xs is slightly more convex than the iPhone X's camera because it is equipped with a larger camera sensor. Therefore, iPhone Sx will not be able to use some iPhone X back cover.

Fixjeiphone NL's YouTube channel shared a video tutorial to dissect the iPhone Xs, see it for more details on the internal components.
