

## Discover the LG PuriCare 2 air filter mask

With the advantages of effective prevention of harmful substances in the environment, convenience in use, the 2nd generation LG PuriCare air filter mask is a technology product that attracts users.

Unlike regular masks, LG PuriCare is integrated with two HEPA H13 filters commonly used on larger home air purifiers, promising to block up to 99.95% of harmful substances such as dust. Fine particles, viruses, bacteria and common allergens can enter the respiratory system. Two internal fans for a continuous flow of clean air, it also has a dedicated respiratory sensor that can detect breathing to automatically adjust fan speed as needed.

This mask has a somewhat bulky appearance because of the integration of many technologies inside, including an 820 mAh battery that promises to work continuously for 8 hours at low fan speed and 2 hours at high fan speed. All key components of the LG PuriCare air mask such as the protective gasket, filter, inner filter, ear strap and fixing clip can be easily removed or replaced.

LG PuriCare 2 makes wearing a mask more comfortable and filters the air better

Following the success of PuriCare, LG has launched the second generation version (Gen 2) of the product with many improvements in terms of air filtration technology, designed to meet medical safety standards and fit, more compact, increased battery life and lighter weight.

A notable feature on LG PuriCare 2 is that it is equipped with VoiceOn technology that comes with a microphone to amplify the user's voice when wearing an air filter mask. This helps people ensure uninterrupted communication as the voice comes out better, which is a limitation that many masks face.

With LG PuriCare 2, breathing becomes easier thanks to dual fans with small motors and AirON technology respiratory sensors that help users breathe more comfortably during activities (including sports). The fan can ventilate so that the fan speed automatically adjusts to the wearer's activity and breathing rate. Even with the many components inside, PuriCare 2's weight is only 94 grams and is designed to fit all face shapes, users can be completely confident when moving outside.

The HEPA H13 air filter on LG PuriCare 2 ensures effective filtration of harmful particles in the air, including PM2.5 dust. The mask also features a silicone face guard that helps protect against leaks and airflow, an internal cover, and an ear strap extender.

Users can wear LG PuriCare 2 even while exercising, still quite comfortable

The mask also supports Bluetooth connectivity, which gives users the ability to monitor their breathing and control the product through a mobile app, including adjusting the microphone volume. Although it has a larger 1,000 mAh battery than the first generation, the mask still gives up to 8 hours of use, and the charging time of the mask via USB-C takes about 2 hours.

Users can also purchase the LG PuriCare 2 air filter mask box separately. With this container, it provides sterilization, which eliminates 99.99% of bacteria on the mask in just 30 minutes using ultraviolet light (UVnano).

In the context of the current Covid-19 pandemic, the need to protect personal health is increasing, the use of masks has become one of everyone's habits. Health experts say that masks are still an important key in curbing the spread of Covid-19, especially in public places.

The presence of a technological mask with air filtration features (specifically filtering ultra-fine dust and preventing harmful agents through the respiratory tract) will help users protect their health more effectively.
