

Dizziness watching the reconstruction of the Formula 1 racing car shattered after 12 hours

Car assembly and repair engineers at Formula 1 have done something that is impossible to do to 'repair' the damaged car in just 12 hours.

Car assembly and repair engineers at Formula 1 have done something that is impossible to do to 'repair' the damaged car in just 12 hours.

1. How to avoid being mistaken for "brake pedal and accelerator"?
2. Discover the mystery of a car stop in less than 2 seconds at Formula 1 track

The 22 GT-R NISMO was badly damaged in an accident at the Spa 24 Hours, Eau Rouge section. It crashed into the wall at a speed of 160 km / h, causing the front roof to be completely destroyed. The amount of work to repair and re-assemble the car is not simple, it is estimated that it will take up to 41 hours to repair it.

However, with the skill and high working spirit, the technical team quickly participated in handling and reconstructing the broken car within 12 hours in an excellent way. Shortly thereafter, the 22GT-R continued to complete the 30th lap after just one day.

How did they work like that? See the whole process of repairing and assembling the car in a small factory recorded by YouTube channel NISMO TV in the video below for answers.
