In last September, on the technology market, there was a stir with a new super product launched by Apple that is iPhone 8. The reason this iPhone received interest because the device will have completely new design, Overflow OLED screen, Home button disappears. Besides, the machine configuration will be extremely powerful and run on the latest iOS 11 platform. While it has just been released and owns many new features, the iPhone 8 still has a security hole, making it easy for vandals to disable the operating system and turn your iPhone into one. Brick with beautiful appearance.

This threat is called iXintpwn / YJSNPI, this is a very malicious profile, if you miss installing on your beloved smartphone, it will make the application on iOS devices completely disabled. effective. iXintpwn / YJSNPI is derived from the Japanese sunrise country and it was first known in November 2016.

In order to test the level of danger and toxicity of this application, recently on YouTube channel 'EverythingApplePro' tested this malicious configuration setting on iOS 11 operating system, so that users can see it. The danger level of iXintpwn / YJSNPI can cause your phone and warn other users to be careful when

using.

The entire malicious configuration of iXintpwn / YJSNPI can be automatically downloaded, when iPhone and iPad users access a website that stores this malicious profile via Safari. This site contains JavaScript and is set to automatically download on the user's device.

iXintpwn / YJSNPI can use an unregistered profile to put it in the 'cannot be deleted' area. This malicious configuration when downloaded will immediately damage the device, by making other applications on the phone unresponsive, suspended or unable to start.

At the same time, the main screen of the iOS device will also appear a series of identical icons, can not view photos or access the camera, sometimes will make the touch screen unresponsive.

Fortunately for users, developers have found a way to remove this malicious configuration when users miss the installation, although it is set up in the area that cannot be deleted. The solution is to use Apple Configurator 2, a helper application to manage iOS devices released by Apple itself. You can use Apple Configurator 2 to delete the installed configuration in Actions.
