

Do you know 3 window management features on macOS Sierra?

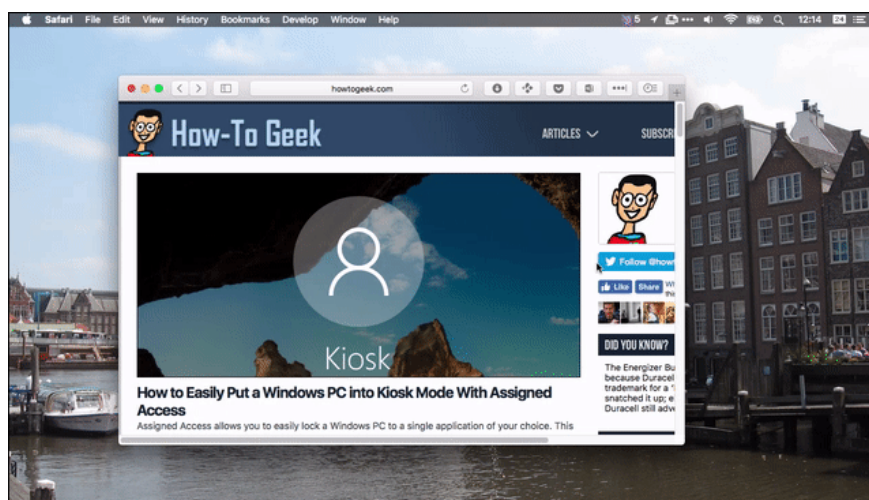

When upgrading Macs to macOS Sierra, there are many features and tips that you don't know about. For example, when performing tricks with multiple windows of the application on macOS Sierra.

When upgrading your Mac to the latest macOS Sierra operating system, there will be many new features updated. Therefore, users will not know all the tricks and proficient use of new features on this operating system. For example, as a trick to be able to work effectively when we open application windows on the machine. In this article, we will guide you to 3 window management features on macOS Sierra, which helps users to work quickly when working.

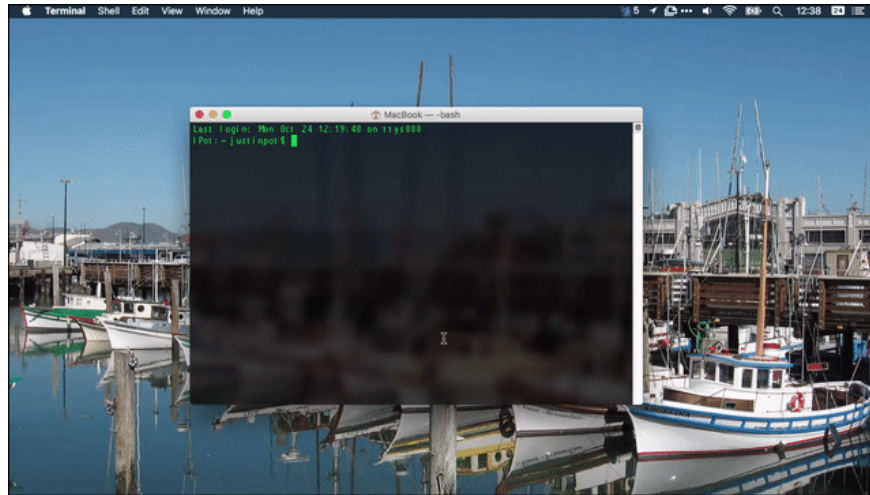

1. Zoom feature next to the window:

For previous Mac OS versions, if the user wants to enlarge the application window, you will move the mouse pointer to the window. If you show a 2-way arrow icon, click and drag to expand or minimize the window as you like.

However, with this new macOS Sierra operating system, users just need to double click on the side of the application's window to zoom in to maximize the edge of the screen.

If you double click on the top corner of the working application window, the angle will be enlarged as shown below.

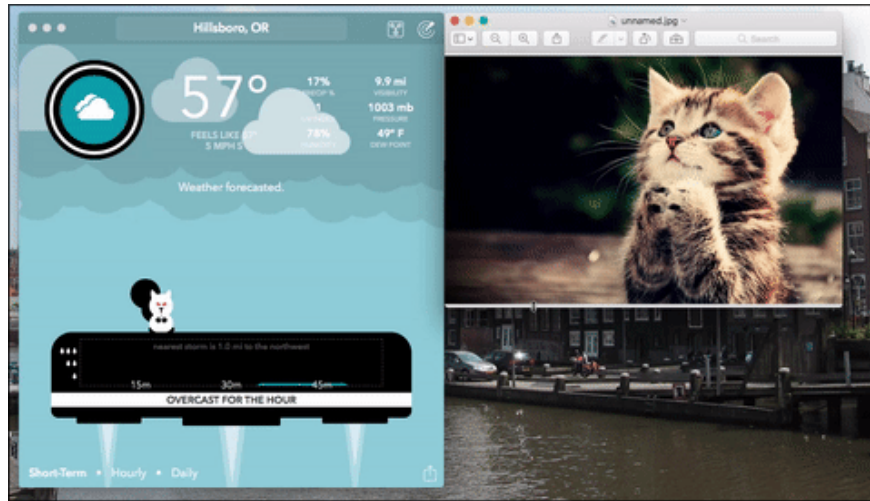

2. Features of joining 2 working windows:

When you drag two working windows together, the windows will be displayed side by side. We will add space for other work windows on the screen interface.

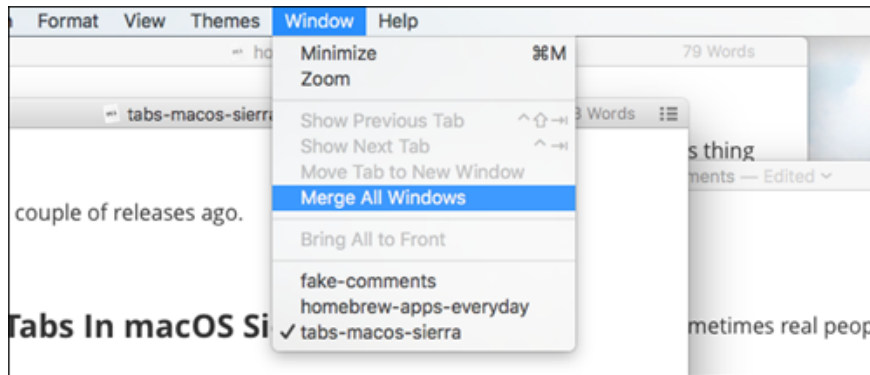

Once you have merged the two windows together, the user can change the maximum height of one of those two windows so that the windows have the same height. Also, when you press and hold the **Options** button, the height of the window can be changed, not just the same as the other window.

3. Display application window in tab form:

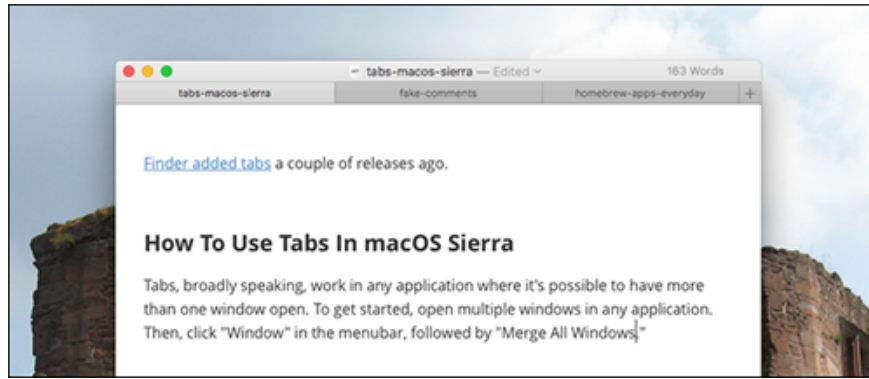

On macOS Sierra, there is an available feature, Merge All Windows, that functions to merge open windows into a single working window in tab form. This will make it easier for users to see every window working, especially when you open multiple applications. Besides, Merge All Windows will also help the screen interface become more open, when application windows are gathered in one place.

When we opened multiple windows at the same time on the Mac, at the menubar bar above the Desktop, we clicked on the **Windows** item and selected **Merge All Windows**.

As a result, the windows have been combined into a single window in tab form. And if you want to do with any window, just click on that window.

When you click on **the + sign** outside, you can add other working application windows if you want. However, this depends on the application or the tool you are using.

Readers can use two other key combinations when working windows in tab form.

1. **Control + Tab or Shift + Command +]** : Go to the next working tab in the group of windows.
2. **Control + Shift + Tab or Shift + Command + [** : switch back to the previous working tab.

With just a few tricks or features available on the operating system, we can work much faster, simpler with the windows of the application open on the computer. And in order to not need to use the cumbersome operation as before, please pin this article to be able to use 3 effective window management features on macOS Sierra.
