

Do you know how to set GIF images as your home screen and Android lock screen?

Recently, iPhone users have boasted that they can place Live Photos photos as lock screen wallpapers, but Android users need not feel abandoned. Because of this highly customizable and feature-rich operating system, there are a few tricks that can easily set up any GIF as a lock screen or home screen for your mobile phone.

Recently, iPhone users have boasted that they can place Live Photos photos as lock screen wallpapers. This is a great way to enrich the already boring lock screen, but Android users don't need to feel abandoned. Because of this highly customizable and feature-rich operating system, there are a few tricks that can easily set up any GIF as a lock screen or home screen for your mobile phone.

Using GIF Live Wallpaper, it has never been easier to place GIF images as the main screen and / or lock screen. However, the application has a multitude of options so users may feel a bit confused, so this article will guide you to put GIF images as the main screen or lock screen for Android phones to use. GIF Live Wallpaper.

How to set a GIF as the main screen or Android lock screen

1. Step 1: Download GIF images
2. Step 2: Install GIF Live Wallpaper application
3. Step 3: Read security and licensing policies
4. Step 4: Select GIF image
5. Step 5: Change the GIF size
6. Step 6: Change the background color of the GIF image
7. Step 7: Preview in landscape mode
8. Step 8: Change GIF speed
9. Step 9: Rotate the GIF image
10. Step 10: Undo change (Optional)
11. Step 11: Confirm the GIF image

Step 1: Download GIF images

If there is no GIF image on your phone, do a search and choose a satisfactory GIF image. To download photos, just press and hold the GIF image you want to download, then click the " **Download image** " button.

Step 2: Install GIF Live Wallpaper application

Next, you need to install GIF Live Wallpaper application on Android phone. To do that, search for " **GIF Live Wallpaper** " on Google Play or use the link below to instantly jump to the app. Touch " **Install** " to download and install, then open it.

Download : [GIF Live Wallpaper](#)

Step 3: Read security and licensing policies

When opening the application for the first time, it will ask the user to read the privacy policy. You can click on the link to read the full policy or you can skip and click ' **Yes** '. You also need to grant GIF Live Wallpaper access to the image library, click " **Allow** " when the request appears.

This is a free app.

Step 4: Select GIF image

First, you need to select the GIF image you want to set as the main screen and lock screen. Touch the image icon at the top left of the screen. Your image will appear here. If you recently downloaded a GIF, it will appear at the top of this list. However, you can click on the three-dash menu in the top left corner and sort by "**Downloads**" if not there.

Step 5: Change the GIF size

Before placing GIF images as lock screens and home screens, you must customize some settings. When first opened, the GIF image may appear small, surrounded by black. This is a problem of GIFs in general because they are often not the same as the frame rate of the phone. Fortunately, GIF Live Wallpaper provides users with settings to change GIF size.

You can move GIF images around manually by clicking on it and dragging or using two fingers to zoom in and out. In addition, you can also use four arrows in the upper left part of the screen. The up arrow will immediately drag the GIF image onto the top of the screen, the other arrows are similar. The middle plus sign will center the GIF.

The image shows a mobile application interface for editing a photo of a basketball game. The main area is a dark grey workspace containing a photo of a basketball court with players in white and red uniforms. The photo is surrounded by a grid of white crop handles. Above the photo, there are icons for crop (mountain), rotate (90°), zoom (crosshair), and a plus sign. Below the photo, there are icons for rotate (90°), a thumbnail of the photo, and a checkmark. At the bottom, there is a navigation bar with the text "Create A Profile Now" on the left, a white circular button with a right-pointing arrow in the center, and the text "Facebook - Connect To The World" on the right. A large, semi-transparent watermark "Quantumang" is overlaid across the bottom of the image.

Step 6: Change the background color of the GIF image

If the GIF image does not cover the entire frame or if you choose not to resize it, you will see the border around the image when you set it as the wallpaper. There are two ways to change the color of these borders. One, you can press the dropper icon at the top of the screen. Next, click anywhere in the GIF image and it will match that color perfectly.

Connect To The
World

Facebook

Quantum

You can also change the background color manually by going to the three horizontal menu bar in the top right corner. You will see three sliders (red, green and blue). Adjust these sliders and the slider will change color to reflect the background color you will set. Confirm the color by touching the dropper icon on the top right. Return to the edit screen by touching the three horizontal menu bar at the top right.

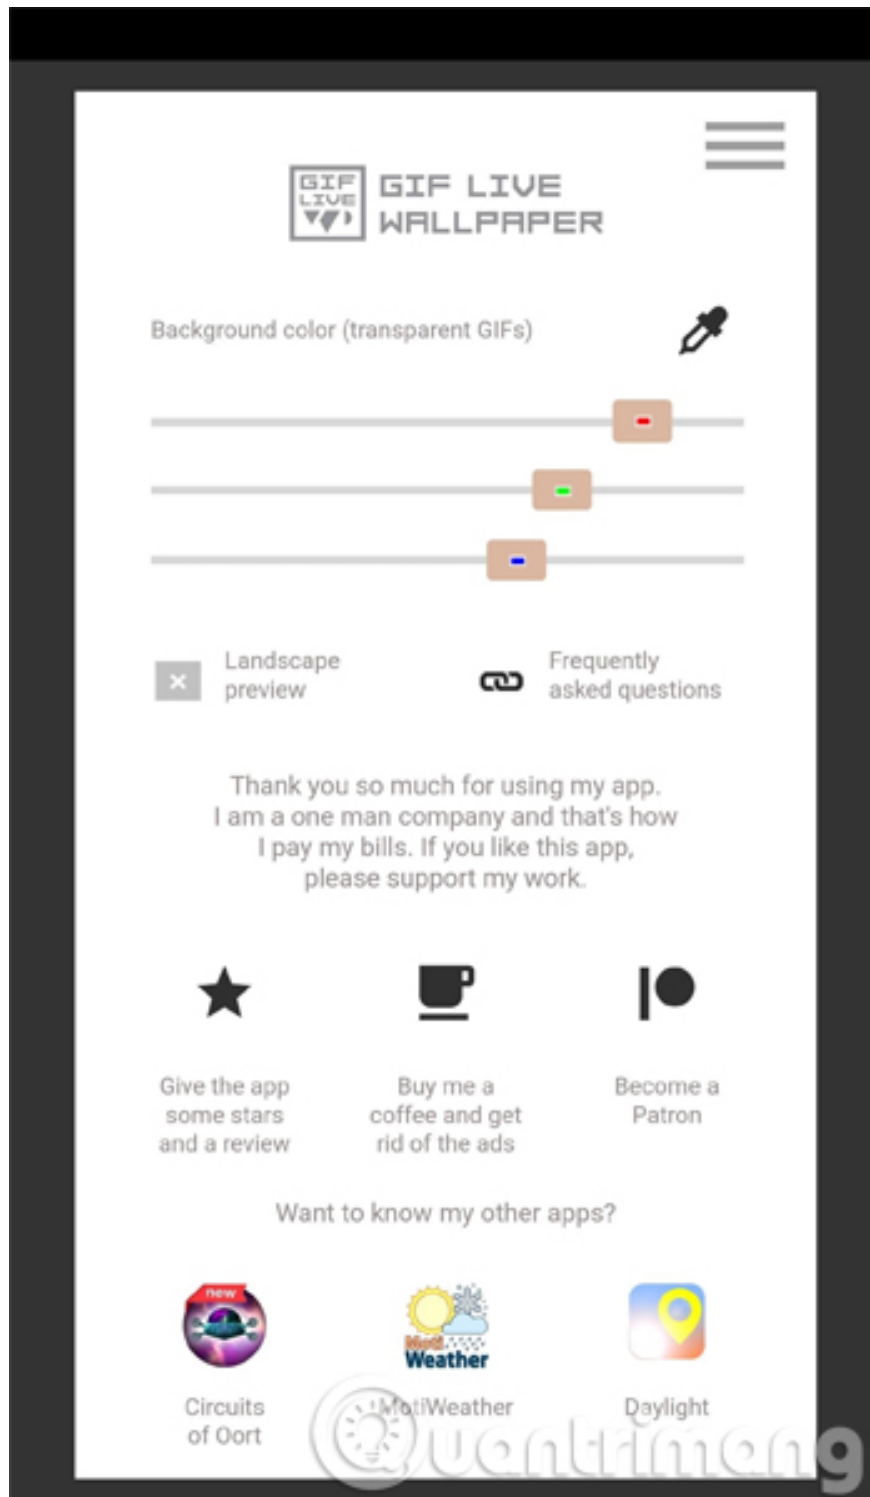

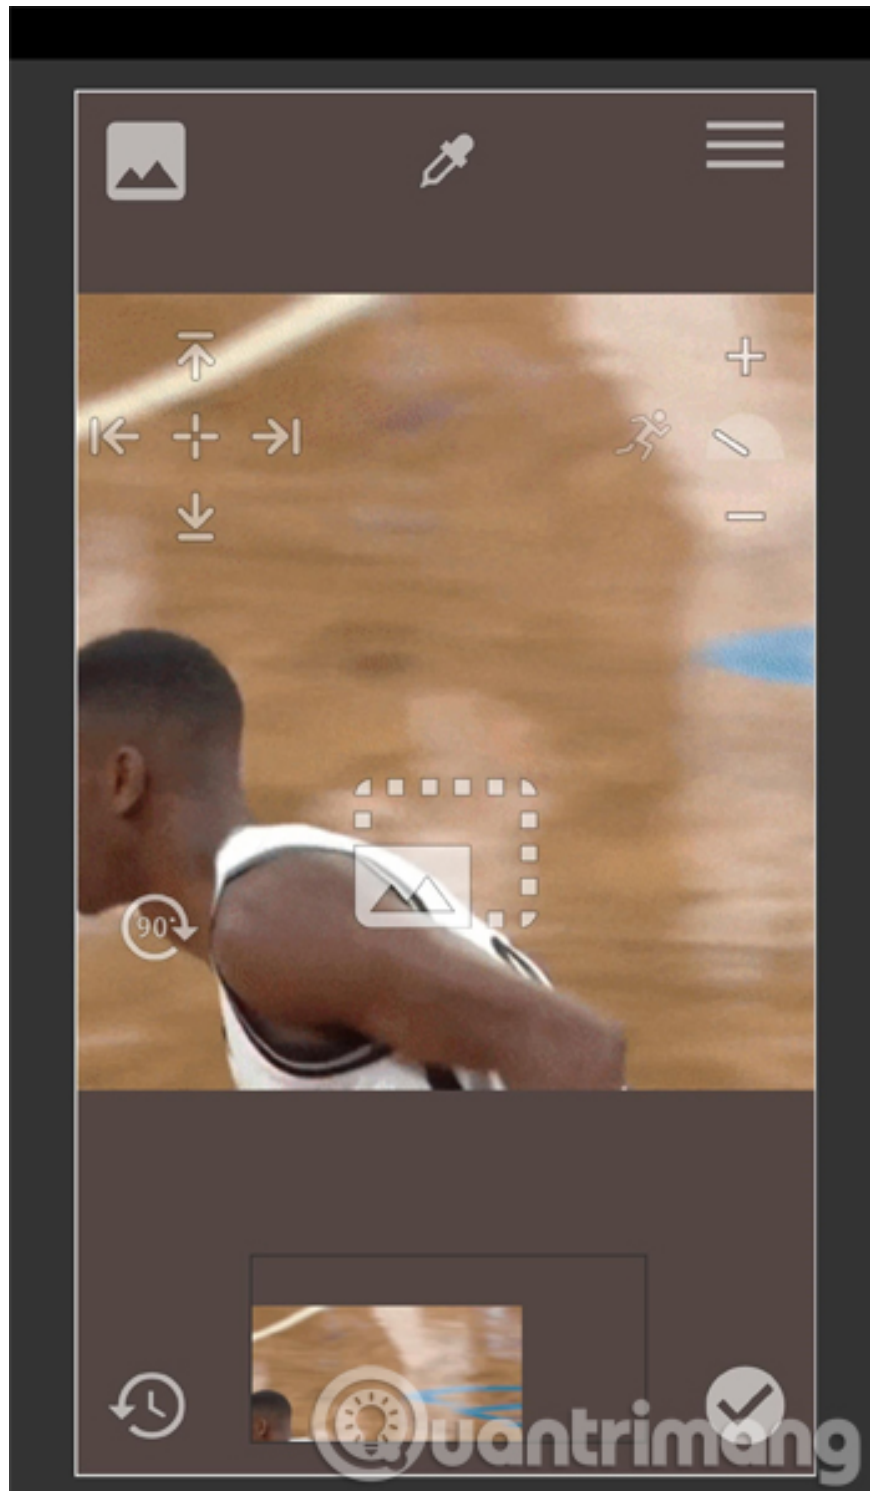

Step 7: Preview in landscape mode

By touching the three horizontal menu bar in the top right corner, you can turn on the setting that allows previewing GIF images in landscape screen mode. Most launchers do not allow screen rotation, so you won't have to worry about this step.

But if the home screen or lock screen turns when you turn on the phone, press " **Landscape preview** " and the GIF image will appear in the editing screen in landscape mode in the preview window at the end. You can make adjustments here to make sure everything looks nice while in landscape mode. Return to edit mode by tapping the menu bar in the top right corner.

Step 8: Change GIF speed

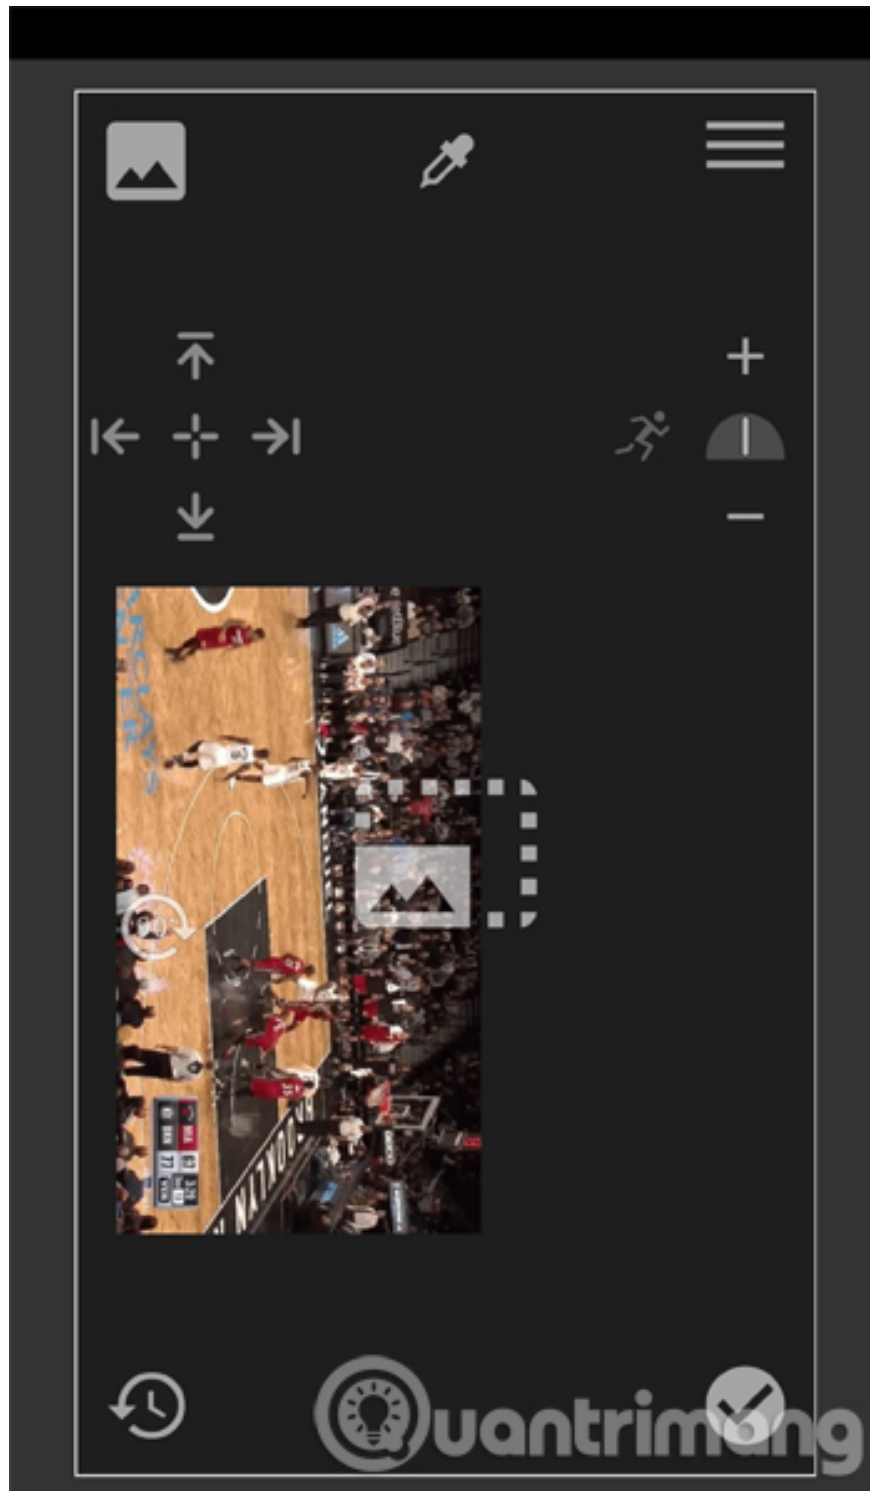

If you want to speed up or slow down the GIF image, use the tool in the upper right part of the screen (with the image of the person running). Click the plus sign to speed up the GIF image and minus sign to reduce speed.

Step 9: Rotate the GIF image

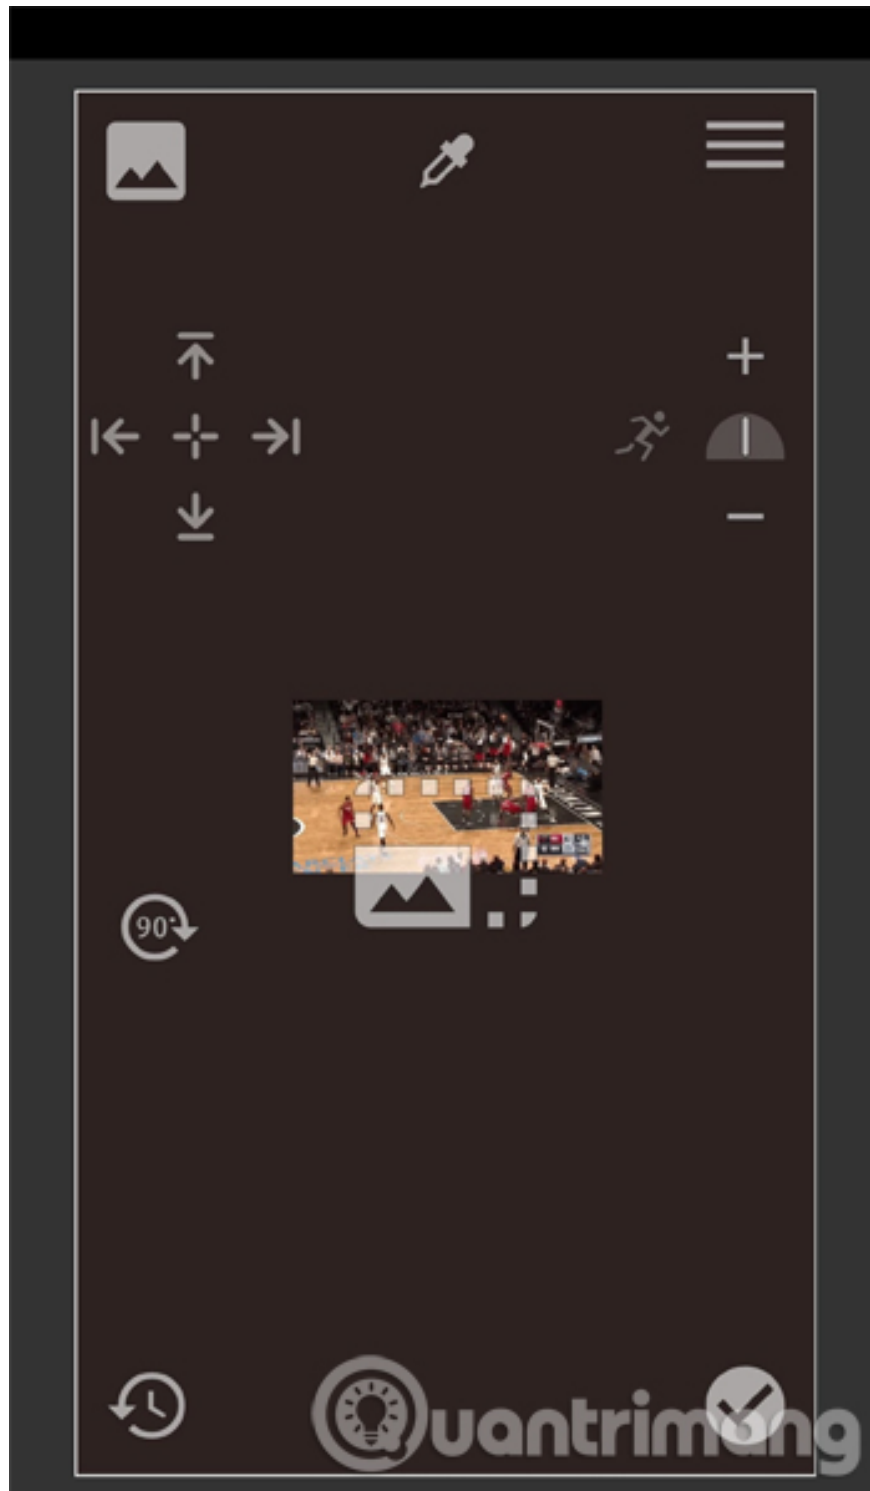

To rotate the GIF image, click 90 ° in the circle on the left, the GIF image will be rotated clockwise by 90 degrees.

Step 10: Undo change (Optional)

If you mistake a step, you can easily undo them by tapping the clock icon in the bottom left corner. Be careful, as this will undo all changes you have made (except for GIF and background colors).

Step 11: Confirm the GIF image

When you're happy with the changes you've made, click on the check mark in the bottom right corner. A message will appear asking if you want to set a GIF as a screen, but this will vary depending on the type of phone you are using.

For most phones, you will have 3 options: "Set as Home Screen", "Set as Lock Screen" or "Both". Some phones will provide the option to set GIF images as the main screen by default, but also provide an option to set as lock screen. After that, press " **Set** " to place the GIF image as the wallpaper.
