

# Do you need a laptop with a 'stone pot'?

Just like gaming laptops or high-performance models, the more durable a laptop with a design and exterior, the more expensive it will be.

## Pay extra for certainty

Just like gaming laptops or high-performance models, the more durable a laptop with a design and exterior, the more expensive it will be. Speaking of durability here also means you are paying for a specific feature, which is the ability to withstand the harsh conditions of the environment, withstand the impact as well as the ability to operate sustainably. time. There are dedicated laptops designed to focus entirely on durability, which is suitable if you are a researcher, often have to move and work in complex environments. But conversely, it would be a waste if you mainly use this computer in the office or at home.

### 1. Top 10 best mini laptops 2018

To find out if you really need a 'stone pot' device, answer some questions like:

1. Will you use a laptop for business, research, or gaming?
2. Do you rely on cloud storage tools to back up your important files?
3. How long do you plan to use this computer?

Owning a laptop that can withstand the elements of weather and bumps gives a sense of peace of mind and a longer-lasting, more economical use, while a light-weight, portable notebook looks luxurious, It is more convenient to use, but it can be completely "flattened" only after a situation that you carelessly drop.

As mentioned, environmental factors play a very important role in whether you should spend more money to buy more durable laptops. In addition, data storage habits are also to be taken into account. If you work in an office and don't really care if your laptop suddenly stops working or is forced to work in an offline environment for a long time, spending more on endurance will be a unnecessary expenses.

1. Laptops below 12 million are best for each criterion

## Perseverance does not mean slow

Many people think that stone equipment in general will usually be quite slow and have low performance, this is true in some cases, but not quite so. For example, a rugged and somewhat 'rugged' laptop like the Dell Latitude 5420 might look like a "crow with the public" when placed next to the ultra-thin, shiny Ultrabooks that are very popular in In the past few years, that doesn't mean that the Dell Latitude 5420 can't function as smoothly as the other Ultrabooks. In fact, in terms of configuration and performance, the Dell Latitude 5420 does not "bog" on any of its competitors.

Again, depending on the actual use needs, you will be able to make appropriate use plans. If you are an office worker, rarely have to move, I recommend you choose small, sleek, sleek devices. If you are a student, or a construction engineer, researchers, often have long-term field trips, a product with a durable design will definitely be a top priority, beautiful or beautiful. So, let's temporarily leave aside!
