Even, some people even shared, from buying air conditioner to a few years now, the family did not have to call a mechanic to maintain, the machine was still running so it saved a considerable amount of money. So where is the right choice? The following article will help you troubleshoot this problem.

1. Should the outdoor unit be installed outside?
2. Should fans be turned on when using air conditioning?
3. This summer, should a misting fan, steam fan or air conditioner be selected?

## 1. Does the air conditioner running well need maintenance?

The answer is yes, electronics experts said, not only the air conditioner but also for most other electrical appliances, although it is operating very well, it should be maintained periodically according to the manufacturer's recommendations. export. Many families do not have the habit of maintaining air conditioning because they think it is not necessary, so that when the machine shows signs of malfunction, call the mechanic to repair. However, this mistake can cause users to burn millions of dollars for repair costs, the worse the situation is to leave the new machine replaced. Not only that, it also harms the health of your family members.

## **2. The reason for the air conditioner is good but should be maintained**

### **Avoid diseases for users**

As we know, air conditioner has outdoor unit and indoor unit. In the process of use, if it is not hygienic for a long time, the dirt will cling to the machine, the steam clinging to the indoor unit, combined with the humidity of the air will be the ideal environment for mold and bacteria. develop.

Since then, the air conditioner air has been blown out is not healthy, easy to cause respiratory diseases, especially for young children, the elderly, or skin diseases such as allergies, redness, itching, . .

**Increase the performance of the machine, reduce power**

Air conditioning though still works well but the machine inside is definitely dusty. Meanwhile, the cooling capacity of the machine will be worse, the parts must be more active to meet the cooling needs of the room. Thus, by the end of the month, the electricity bill will increase dramatically.

In particular, for outdoor units that are radiators for air conditioners, if too much dust is attached, the outdoor unit cannot radiate well and become overloaded, causing the air conditioner to suddenly be interrupted suddenly. Sometimes, too thick dust in the outdoor unit can also cause compressors (engine block) - the most important part of the air conditioner will be mysterious, not dissipate heat, leading to damage.

### **3. When should air conditioning be maintained?**

If you want to extend the life of the air conditioner, want to save electricity when using air conditioner, you want your family to always live in a clean atmosphere without too many harmful bacteria when using air conditioner, so you should Attention to machine maintenance.

Accordingly, with one-way air conditioning, it is advisable to maintain the cleaning machine at least once before the hot season. As for 2-way air conditioning, do it once before the hot season and once before the cold season. If you are knowledgeable about air conditioning, you can clean the most easily by cleaning the filter net, outdoor unit, indoor unit, . However, with some parts of the air conditioner, you need to ask a professional. maintenance for inspection. Note that you should call reputable places to avoid being "cut and cut" by workers, tricking and charging air conditioning.

Read here, you've definitely got your answer on the above question, right? When the air conditioner is clean, the machine will run stably, quieter and deeper. So, instead of leaving the machine broken to call a repairman, reducing the life of the machine, you should maintain the air conditioner periodically!
