

Does Find My Friends work between iPhone and Android? Ways to share your location with Android users

The Find My Friends app is a useful tool to check where your loved ones are and if they are okay. Of course, it would be ideal if all your relatives and friends use the same phone model, but things can get a little more complicated if some people use iOS and the rest use Android. TipsMake today will answer questions about location sharing so you can choose the right application for you and your family members.

Can Find My Friends app connect between iPhone and Android?

No, Find My Friends cannot connect between iOS and Android users. Although both iOS and Android have Find My Friends apps, devices under these two operating systems cannot locate each other. iOS users can only send their location to iOS users, similarly Android users can only send their location to other Android users through the app.

However, Find My Friends is not the only location sharing application, there are still many other options.

Can iPhone and Android share location with each other?

Yes, if you use Google Maps' location sharing feature. The Find My Friends app doesn't work between two different device models, meaning it can't connect between iOS users and Android users. However, if you have Google Maps, just open the menu on the left side of the screen and tap 'Location Sharing'. Tap the 'Add' button and select a time period for location sharing. Then, send an invitation to the person you want to share with via message by entering their phone number.

Can Android phones track iPhone's location?

Yes, if you text the location through Google Maps. Simply text iPhone users a link to their real-time location via Google Maps by selecting 'Location Sharing' and entering your phone number. If you want, you can ask your partner to set this feature to on until they turn off their phone. That way, you can track an iPhone user's location

all day long.

Can I know when someone checks my location?

No, you will not be notified when someone checks your location. Find My Friends will not send anyone notifications about how often their location is checked. If you stop sharing your location through the app, your friends will no longer be able to know where you are.

Which location tracking apps are worth checking out?

Life360 is one of the most popular location sharing apps. This app is mainly for families, but you can also share location with friends. As long as everyone has the app downloaded, you'll be able to check their location at any time. This app also works between iOS and Android devices.

Find My Kids is a recommended app for young children. Typically, the location will be shared from the smartwatch that the child always wears. Just download the app and you can know your child's real-time location. Find My Kids is available for both Android and iOS.
