

# Don't joke, shooting just natural can kill others

In movies, we often see, police shoot only to warn. But have you ever wondered where the bullet will fly?

In movies, we often see, police shoot only to warn. But have you ever wondered where the bullet will fly?

1. What horrible thing happens when the body is hit by a bullet?
2. The impressive moment when the bullet rushed out of the barrel
3. Do bullets fire?

The answer certainly made many people surprised. When the bullet is fired into the sky, it can fall at a speed of 640km / h and can hit a 'unlucky' person, threatening to cause injury or even rob their lives.

The stray bullet from the sky fell through the corrugated iron roof.

In fact, there are many cases of being hit by bullets fired by stray bullets into the air. Therefore, shooting is only a very strict regulation. In sports competitions, command rifles do not carry warheads and only have an explosive effect.

The video below will help us understand, what happens when shooting into the air.
