Tips to help you win at rank Queen or more with Dota Auto Chess

Synergies / Line up / Buff support

Before Round 16, owning a solid stroke is very important. This time is when every gamer gets stronger and most of them start punishing the weaker team, usually planning a squad in rounds 11.

Depending on the units received from each turn, you can change your formation when you find units that are more suitable for your current lineup. For example, Troll Warlord / Dragon Knight in the Warrior / Knight, don't pick things that aren't related to your current lineup.

In addition, you should mix Synergies for your team. Examples: Beast + Warrior, Troll + Knight + Warlock, Dragon + Elf + Assassin, Beast + Elf . And there should be more **Disable** at the end of the game.

Winstreak or Losing streak

GAME OVER											
RANK	PLAYER NAME	LEVEL	PLAYER	LINEUP	ROUND	W-L	KILLS	HITS	DURATION	AWARD	
1		Knights-3			41	34-5	218	13	00:46:12	× 2	
2		Knights-2			41	29-11	182	50	00:46:09	× 3	
3		Unknown			37	20-16	158	54	00:41:27	× 1	
4		Knights-8			33	16-16	130	54	00:37:05		
5		Knights-3			29	12-16	102	54	00:32:46		
6		Knights-5			25	12-12	81	52	00:27:59		
7		Unknown			24	10-13	67	53	00:26:49		
8		Pawn-8			18	4-13	22	56	00:19:03		

Once you have a good start, you must know how to maintain it. If you have an unsatisfactory start, follow the instructions below.

Winning series:

1. You can go up or re-roll to maintain the winning sequence. The consideration now is whether you have enough two-star monsters on your chessboard or not, if there are more 2-star monsters, will there be a lot of strength. If not, the advice now is to level up.
2. Suppose if you have 1 star monster on the field, and there are about 3-4 pairs on the tray, then re-roll is reasonable. Of course you have to pay attention to the amount of money you have, for example you have about 48 gold, then use 8 gold can be used for re roll and buy more generals.

Losing series:

1. If you have a bad start and lose the first 2-3 rounds because the dignity is too bad, you should now use losing streak. Change HP to get income because this time income is the most important thing to come back later. Usually only let the 1st generals turn up, even remove the generals or the white eco if there are people who intend to eco like me. Only buy heroes you really need or key heroes for.
2. Usually, it will keep the losing sequence until round 15, but depending on the situation you can change. If your blood is below 40% it may be possible, but if it is below 25%, you must use the money immediately.

Reserve gold, re-roll or level up in time

We all know it will "save" about a gold up to 50. But it will be very difficult for meta to be as fast as today, unless your home is very healthy.

If you have a strong line-up and your blood is over 65%, you should still save gold. But if you lose too much blood (9 + hp / round), you need to use money to level up or re-roll right away, in addition there are some notes that you need to keep in mind when using gold.

1. **Leveling:** In addition to adding 1 hero, leveling up also makes it easier to find the hero keys: Troll, Warlord, Techies . In addition, after leveling up you must see if you have enough money to roll out the champion you need (about > 20 gold. For example, level 8 to find Troll 2 and search for Legends will be better than finding Troll 2 at level 7.
2. **Re-Rolling:** Consider whether there are many couples and notice the level of the heroes you want to go to 2 stars. For example, a high \$ 2 monster will be available in round 4 - 5, while a \$ 3 monster will be in round 6 - 8.

If you do not have enough money to level up and you do not have a couple, then you only have the final option that value hero can use. For example: **Kunka** , **LD** , **Doom** , . but keep in mind that don't be too separate from the current lineup.

Here are a few tips when playing Dota Auto Chess at Queen rank and above, mainly how to manage money, level up, re roll and build the squad according to the appropriate time in the game.
