

Download DNS Jumper 2.2: Free software to change DNS settings

DNS Jumper is an IT and development software application that allows users to modify information associated with their Domain Name Server (DNS). Not only is this beneficial when trying to find a more secure connection, but this packet will often be deployed when determining the IP response time.

1. Free software
2. Version: 2.2
3. Update date: 11/09/2020
4. Platform: Windows

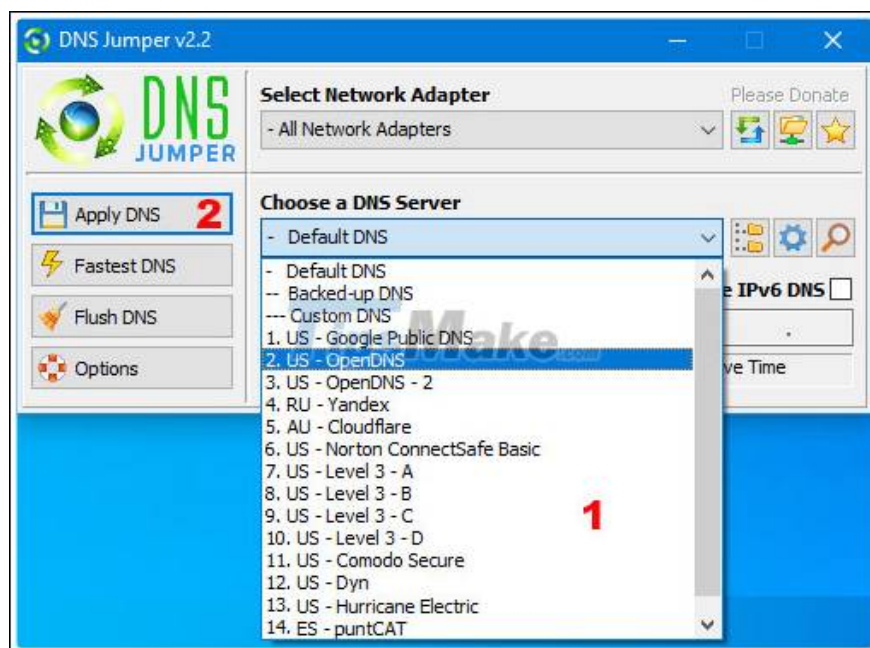

Download DNS Jumper 2.2 [here](#).

Core tools and uses

DNS Jumper marks some important fields when enabled. These include drop-down menus that display available DNS servers, as well as network adapters. You can view the settings for each of these options and select your preferred network. These will then take precedence over the other options in the list.

However, the DNS server address can be entered manually. This can help increase the level of existing wireless security, rather than being forced to use a public host. Users who have downloaded this program feature the following:

1. It improves your security
2. No installation required, just run the program
3. It improves web browsing speed
4. There are many servers to choose from
5. It is very helpful to visit blocked websites
6. It protects your child from inappropriate content

Additional features

The use of secure servers via DNS Jumper can also be used as an effective parental control, as it can block malicious servers and suspicious websites, for example. such as sites related to pornography.

DNS Jumper is compatible with both 32-bit and 64-bit Windows operating systems. A file size of 546.69 kilobytes will not interfere with the performance of most computers. If you are looking for a similar, free app, we recommend you to download **namebench** and **QuickSetDNS**.
