

# Download Driver Offline - Full driver set for computers not connected to the Internet

Download Driver Offline - Full driver set for computers not connected to the Internet. You want to reinstall Windows and need to find a full driver installation tool for your computer? TipsMake.com would like to recommend to you DriverPack Solution - software to download and install

You need to install or update certain drivers but don't know what to do? Or you want to reinstall Windows and need to find a full driver installation tool for your computer? **TipsMake.com** would like to introduce you *DriverPack Solution* - the software to download and install the full offline driver without an Internet connection.

## 1. Introduction to DriverPack Solution

*DriverPack Solution* is a free driver update tool. With just a few clicks, the application will find the appropriate drivers your computer needs, then download and install them for you - without having to go through any wizard.

*DriverPack Solution* has all the features of a driver update tool you expect:

- Compatible with Windows 10, Windows 8, Windows 7, Windows Vista and Windows XP.
- Lightweight, does not take long to download and does not require an Internet connection to update the driver for free.
- Can be launched from any folder, hard drive or mobile device, such as a flash drive.
- Can install all necessary drivers at the same time.
- Displays the version of the current driver as well as other drivers that can be downloaded for replacement.
- Can list all drivers, even those that do not need updating.
- The website allows you to download specific drivers in a 7Z file, such as chipset, bluetooth, audio, video, etc. After downloading, suppose that with the bluetooth driver, the 7Z compressed file contains folders Particularly for different manufacturers such as Logitech, Motorola, Realtek, Broadcom, .
- The Diagnostics section acts as a basic system information tool.
- Includes a batch software downloader that suggests programs you might want to add to your computer.

## 2. Download DriverPack Solution

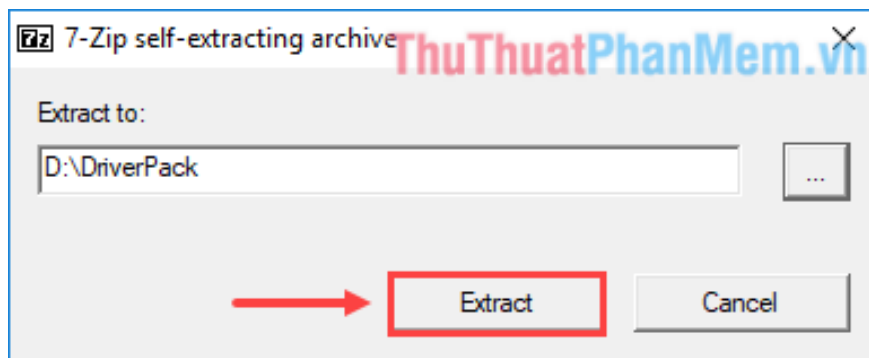

You can download *DriverPack Solution* at the link below (Offline Network version). After the download is complete, it can run immediately without installation:

<https://drp.su/en>

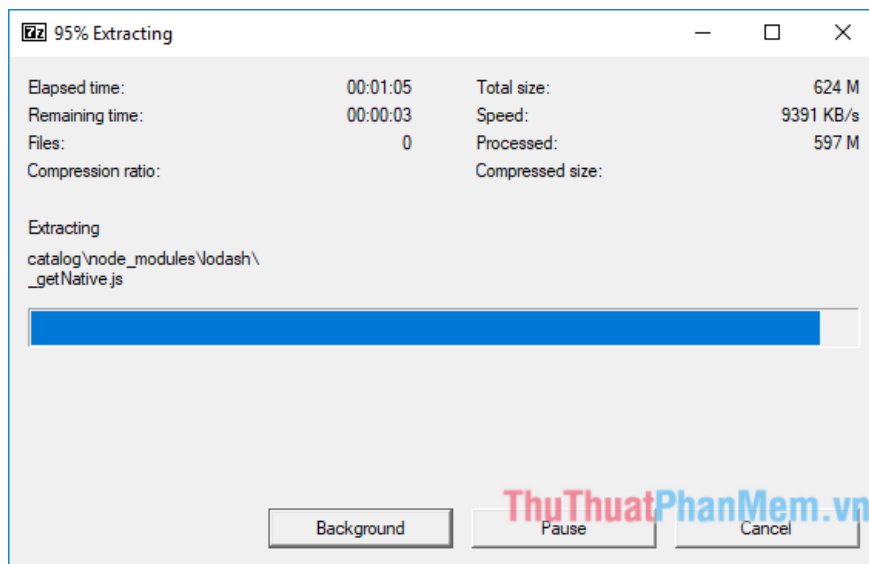

### 3. Instructions for installing and updating drivers with DriverPack Solution

After opening *DriverPack Solution* , follow the steps below:

Step 1: Select the extracted folder and then click **Extract** .

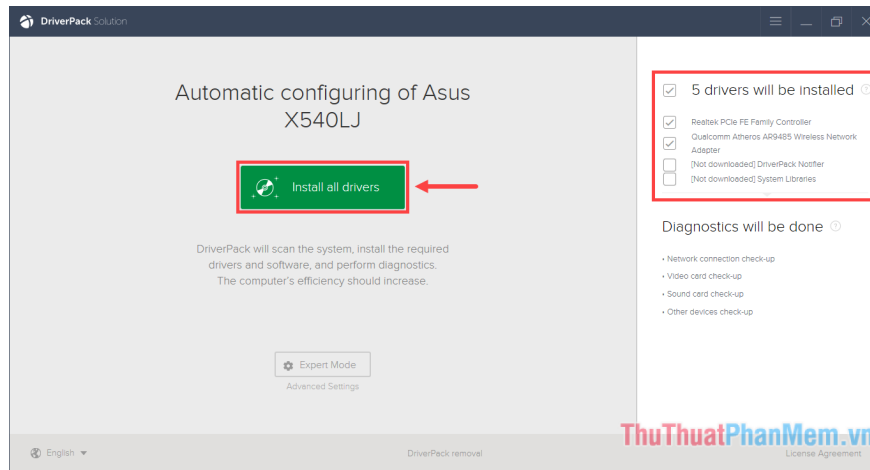

Wait for the extraction process to finish.

Step 2: Open the *DriverPack.exe* file in the extracted folder. There are two ways to start the driver installation:

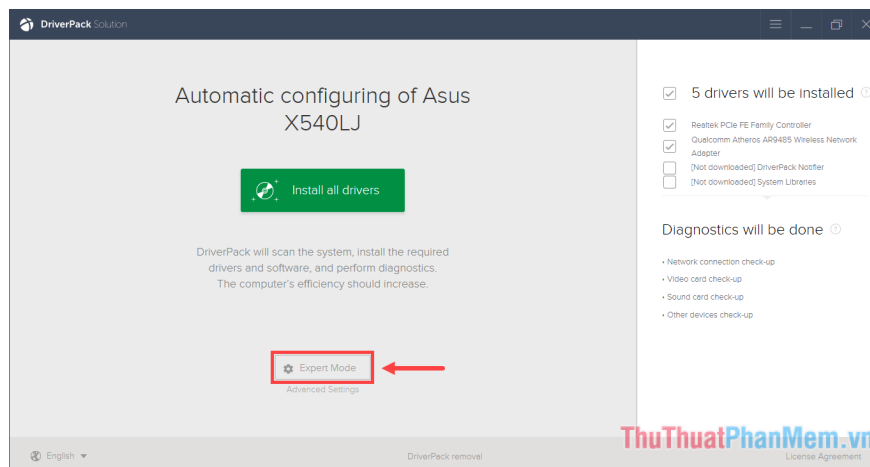

\* **Method 1:** Install all drivers immediately.

- Select the drivers to install in the right column and then click **Install all drivers** .

\* **Method 2** (recommended): Customize before installing.

- Click on **Expert Mode** .

- In **Settings** , you can turn on / off a number of options before installing the driver such as:

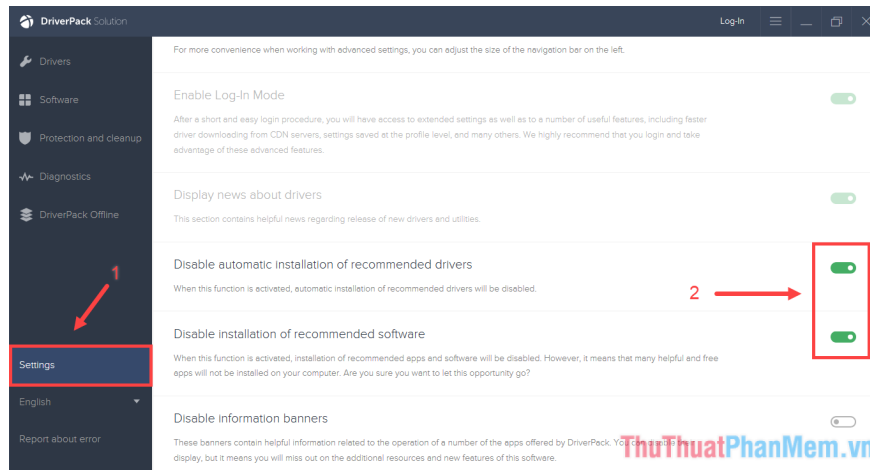

+ *Delete temporary files* ( *Delete temporary files* after installation is complete);

+ *Installation of driver toolkits and useful apps* (Install driver toolkit and useful applications);

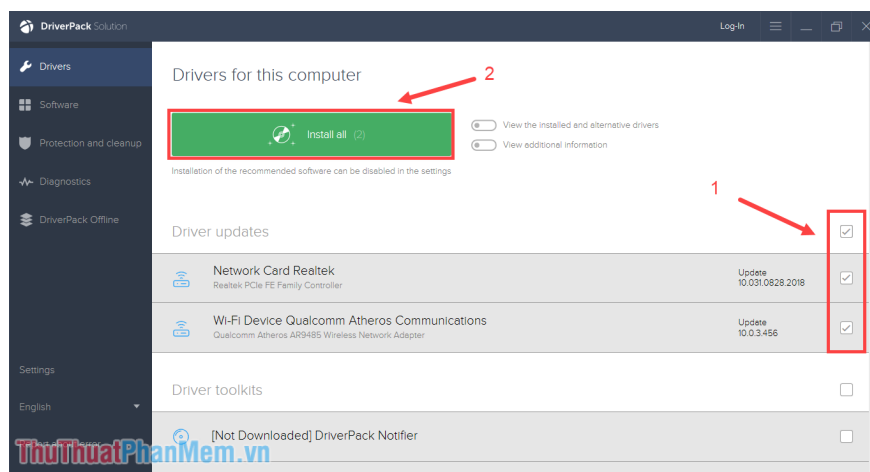

+ *Disable automatic installation of recommended drivers* ( *Disable automatic installation of recommended drivers* );

+ *Disable installation of recommended software* (Disable automatic installation of recommended software );

+ *Create restore point* ( *Create restore point* , in case an error arises after installing a new driver).

- Check the drivers and toolkit drivers you want to install (can select all) and then click **Install all** .

- The program will require restart after installation is complete.

So just through a single software, you can install / update all the drivers for your computer without even having to connect to the network. If your computer is about to install Win, you can download *DriverPack Solution Offline Network* and save it on a different drive, then a few mouse clicks as instructed above. Good luck!
