Enjoy a free trial of GOM Encoder, an easy all-in-one solution for you.

GOM Encoder is a powerful all-in-one video converter for Windows PCs

Why use GOM Encoder?

Batch conversion

If you are a multi-core processor user, you can convert multiple files at once.

Free

Try out most of the software's features in the free trial version.

Quick and easy

The intuitive user interface and built-in conversion presets make the program easy to use for everyone. Not only that, GOM Encoder also boasts a faster conversion speed than other video converters. Users with multi-core processors can use the batch conversion function to process multiple files at once.

Intel Quick Sync Video Feature Support

Intel Quick Sync Video support lets you convert videos at breakneck speed (only available on Intel Quick Sync Video enabled PCs).

Support multiple formats

Supporting a comprehensive range of input and output formats, this product allows you to convert almost any video, even those that you cannot do with other conversion software.

Support a variety of devices

GOM Encoder supports output formats for many types of devices such as iPad, iPod, iPhone, PSP, PS3, Xbox 360, Zune, Blackberry, Android, etc.

Advanced Functions

Adding subtitles, extracting audio, embedding your own logo, and creating snapshot previews are just a few of the advanced features that come standard in GOM Encoder.

In summary, the most outstanding features and features of GOM Encoder include:

1. Users with multi-core processors can convert multiple files simultaneously
2. The screen capture function allows you to capture still images from video files.
3. The Snapshot Preview function allows you to create previews converted from still images taken at various points in the video.
4. The Merge function allows two or more video or audio-video files to be combined into a single file.
5. Preset output settings make it easier to convert for specific devices.
6. Segment video and audio files, so that users can convert only the desired parts.
7. Convert audio from video or various music files to MP3 or AAC.
8. Use the DSC (Direct Stream Copy) function to change the video container without changing the format.
9. Create Music Wallpapers [still image (JPG or BMP) + sound]
10. Export subtitle file (.srt/.smi)
11. Generate subtitled output with subtitle files (.srt/.smi) when converting to MP4.
12. The video split function allows a file to be split into two or more files.
13. Adjust brightness, contrast, hue and saturation.

14. Apply video effects (Deblock/Smoothen/Sharpen/Deinterlace/Flip Vertical/Flip Horizontal).
15. Export a thumbnail file.
16. Embed personal logo or watermark on converted video.
17. Support playback speed change function.
18. Create high quality video with 2PASS encoding.
