GOM Saver was built by the video experts at GOM & Company. GOM Saver was created to help you save memory space on your smartphone. Unlike other cleaner apps, which temporarily save a few kilobytes (kb) of memory by cleaning caches, GOM Saver can save you gigabytes, having a huge impact on your storage space. .

Why is GOM Saver the best memory saver app?

Other 'cleaner' apps only clear cache and temporary files. This only saves you a few kilobytes (kb) temporarily. Temporary files and caches are created automatically when you use your phone, such as browsing the Internet and chatting.

GOM Saver can save you gigabytes of memory space, giving your phone a new life. By creating more memory storage space, GOM Saver allows you to keep all your files like videos, photos and apps.

What does GOM Saver do?

We all know that video and image files take up a lot of storage space. However, videos and photos are precious to us and are something to be kept and cherished, not something to be deleted when storage space is needed.

GOM Saver, automatically and easily, optimizes the videos and images you shoot with your phone so that they take up less memory space without significant quality loss through the use of compression technology.

With 1 tap, you can now keep all your videos and photos, and create more!

Who should use GOM Saver?

Everybody! GOM Saver is for anyone who records videos or takes photos with their phone and needs more storage space.

How does GOM Saver work?

1. When you open GOM Saver, it will automatically scan and analyze the video and image files on your phone.
2. Then, GOM Saver selects videos and images to optimize.
3. GOM Saver will automatically upload original videos and images to the cloud and leave optimized videos and images on your phone.
4. Everything is done! Now, you have more storage space.

For Android phones, refer to the article: [GOM Saver: a tool to compress photos and videos on Android to save storage space for the device](#) for detailed implementation!

You have videos and photos in your phone to watch anytime. And just in case, your original videos and images are still safely stored in the cloud service of your choice!
