What is Hotspot Shield?

Hotspot Shield is a VPN, also known as a virtual private network, that can be used when browsing the Internet, to provide you with privacy and anonymity. It turns public networks into private networks, protecting your identity from third parties trying to spy on your data.

Hotspot Shield connects to a bunch of different servers, hides the IP address and displays an alternate address. This is a popular way for businesses to stay connected and is intended for use by IT professionals in preventing data access from hackers and identity thieves.

Hotspot Shield operates a mid-sized network, with its servers located in nearly 100 locations in more than 70 countries. From the list on the website, you can see that the servers are spread out evenly, with about 20 servers in the United States. The company also provides more than 2,500 personal IP addresses.

Hotspot Shield is one of the fastest VPN services out there, with quite a few tested servers offering fast download and upload speeds, low latency. Whether you need a VPN for streaming, torrenting or gaming, you'll be satisfied with Hotspot Shield.

Hotspot Shield Features

Hotspot Shield 10.9.4 has Two access modes

Hotspot Shield or HSS has two modes for users to choose from. There's a free mode, which allows you to visit a virtual location in the United States and is supported by ads. It offers standard definition streaming but won't connect to popular streaming services. The second way to access a VPN is through premium mode, which works through a one-month, one-year, or two-year subscription.

Premium plan features include an ad-free experience. You have access to over 70 virtual locations for high definition streaming and selection. When you're on a premium payment plan, streaming services like Netflix, Hulu, and BBC iPlayer won't be blocked, but you'll need to use the correct server. The speed of the free version is x1, while the premium plans give you x4 speed.

Hotspot Shield 10.9.4 Connect quickly

The speed that Hotspot offers makes it one of the fastest VPNs. It uses a special protocol called Catapult Hydra. Generally, the speed slows down when using a VPN, but the connection is still fast and in some cases, faster than a connection without a VPN. Switching between connections is also fast, clicking a new location will get you up to speed with the server within seconds.

There are FAQs (frequently asked questions) for free user support, while a paid subscription provides users with 24/7 customer support. You can connect 5 different devices to one premium account, which means you can take advantage of this VPN in a number of different locations or share it with your family members. Free members have the option to try paid accounts.

HSS was created by AnchorFree, which is known for low latency products that promote security. The company makes a number of other products, including a Chrome extension for Hotspot. However, this extension only encrypts browser traffic, while a full VPN will also impact the apps you use.

Hotspot Shield 10.9.4 Simple installation

The interface of this VPN looks very smart, neat and easy to navigate, with a large launch button to keep you connected. You should see a clock showing your connection length, with the option to stop. There's a simple

one-page settings menu that gives you access to everything you need, although advanced users may want more details. HSS is designed to connect when Windows starts. It will find your most recently used network, and once connected you can switch to an alternate network.

Hotspot Shield is known for its security capabilities, which means there is no IP or DNS leak. It provides data protection through encryption and phishing blocking. The app also provides an automatic killswitch to protect user data in case the VPN connection goes down for any reason. There is a concern about logging and privacy policies. Although Hotspot Shield does not save activity logs, some data is logged during your session, such as your IP address, even though that data is deleted at the end of the session. Since the VPN focuses on privacy and anonymity, it was surprising to see that Hotspot Shield does not offer anonymous payment methods, such as Bitcoin.

There is another option besides Hotspot Shield 10.9.4

While Hotspot Shield has its advantages, it's not necessarily an option for everyone, perhaps you want more control over the settings, or maybe you need something simpler. There are alternatives on the market that might suit your needs if you don't have this VPN fit for.

An alternative coming from the same company AnchorFree is Betternet Free VPN, a service with no data limits. While the speed is considerably slower than the premium version of Hotspot, it's free and easy to use. You don't need to sign up for an account, just click and connect.

If it's a premium plan you're looking for, a viable alternative is IPVanish. This is a great option for fast connection speeds and privacy, and offers multiple device connections, but won't work with all streaming sites. It gives you the option to use an anonymous payment method, as Bitcoin is accepted.

If you're looking for a similar plan with both free and paid subscriptions, but with a clearer privacy policy, then Windscribe might be the answer you need. The amount of data allowed through this VPN is generous, and the settings give you some control over your preferences.

However, you may find that the number of locations offered is more limited than the other options.

Hotspot Shield 10.9.4 is A popular and useful VPN

Hotspot Shield has more than 650 million users. The choice of packages offered is very attractive, and the most outstanding feature is the speed you can get, which means smooth HD streaming through a VPN. The lack of DNS leaks and access to streaming services have certainly contributed to Hotspot Shield's popularity. Overall, the ease of use and good customer service that make this product stand out.

The latest version of the application has improved some of the problems users encountered through specific servers. Internal web server has been removed to fix problem with CVE-2018-6460. There is also a vulnerability in Hotspot Shield that has been reported and fixed.
