While the app is free to download, you still need to subscribe to a plan to access the various entertainment options. Additionally, Netflix downloads are not limited to Windows and are available for download on Android, iOS, and macOS devices.

## Netflix Features

### A popular streaming service

Netflix is ??considered one of the most popular applications for streaming movies, TV shows, and documentaries. The media service provider has also entered the field of new content delivery under the '*Netflix Originals*' banner . Since these Netflix movies, series, and shows aren't available anywhere else, they have significantly contributed to the popularity of this streaming service.

By creating an integrated Windows app, Netflix has made it easier than ever for users to enjoy their favorite movies and series. Not only does the app provide personalized recommendations based on your watch history, but it also comes with various features that aren't available on the browser version.

However, the entertainment app, like Netflix's web app, is not free and requires subscription.

### Familiar interface

The Netflix download for Windows has the same dark background, white text, and a large thumbnail. The application's home screen displays a list of the content you are currently viewing, viewed or added to your list. Following these three are various recommendations that Netflix has personalized based on your watch history. Other options available on the page are category, search bar, account settings, and configuration.

If you have used Netflix before, you will find this application extremely familiar. However, what makes this app worth downloading are the features already included. Netflix for Windows offers better resolutions and ratios so that the interface is optimized according to the device screen size. It is also much more responsive, and can be

pinned as a small window while you continue working on other tasks.

In addition, you can control the built-in desktop application with touchpad gestures or through the touch functions. Regardless of your input source, Netflix will automatically configure itself to allow you to easily navigate the interface.

Finally, the app supports Cortana, so you can easily use voice commands to search, play, and pause shows and movies at any time!

## Offers a wide selection of content

After completing the Netflix login process, you'll have access to a variety of entertainment options, separated into different genres and categories.

When hovering over the thumbnail, you can watch the video, read summary and get other info like year of production, rating, cast, etc. You can even discover new content with how to explore hand-selected categories like Horror, Comedy, Classic, etc.

## Support multitasking function

Unlike the web version, the Windows application allows users to view programs while working on other applications! It's a great feature, especially if you want to watch shows without losing your productivity.

All you need to do is to pin Netflix on the right or left side of the screen and continue watching everything on a smaller window. Switching back to full screen mode is also simple and seamless.
