

Download now Windows 10 SDK Preview Build 16257 and Mobile Emulator Build 15235

As usual, for every update to Windows 10 Preview, Microsoft quickly released an update for Windows 10 SDK Preview to take full advantage of the operating system. Yesterday, Microsoft released a new version of Windows 10 SDK and a new emulator for Windows 10 Mobile.

As usual, for every update to Windows 10 Preview, Microsoft quickly released an update for Windows 10 SDK Preview to take full advantage of the operating system. Yesterday, Microsoft released a new version of Windows 10 SDK and a new emulator for Windows 10 Mobile. The latest SDK has the code 16257 - this is the latest Insider Preview for Windows 10 Fall Creators Update. This Windows 10 SDK mainly focuses on bug fixes, minor upgrades for the SDK and API changes. The emulator for Windows 10 Mobile is build 15235.

1. New points on Microsoft Outlook.com Beta and how to register
2. Microsoft released an updated patch for 25 critical security holes
3. After 20 years, this is the first time CMD.EXE has been upgraded to a new Windows 10

The SDK will have a few issues such as:

1. When viewing XAML in Designer Window in Visual Studio, the drivers will not render. This problem can be solved by using Visual Studio 2017.3 Preview.
2. Compilation may fail on non-Windows 10 platforms.
3. When building applications on previous platforms, you may experience a build error.

Download the SDK and Emulator [here](#).
