

## Download safe

Despite the computer nightmare of the system being damaged and unable to control the adware, some free and shareware software is too attractive to ignore. Follow the general instructions after you download the software. If lucky to find

**Despite the computer nightmare of the system being damaged and unable to control the adware, some free and shareware software is too attractive to ignore. Follow the general instructions after you download the software. If you're lucky enough to find the right place, even some free and shared programs can help you solve the problem.**

**Choose the download site carefully.** Not all sites test for viruses, spyware, software stability and usability. You should choose big, reliable download sites. The software in Download section of PCWorld.com has been carefully checked, can be trusted.

Before downloading, **read through reviews or user reviews** . The best download sites all provide review and review information from the editorial team and allow users to submit comments on the pros and cons of the software.

**Check if the author** or software vendor provides technical support. Often you will find a web site address, email address or phone number.

**Carefully read** the software **use agreement** and **carefully review the installation screen** . These are the two best ways to see if the free program comes with spyware. If you don't understand the agreement, check out [Spychecker.com](http://Spychecker.com), which provides a database of downloadable programs (adware) and spyware (spyware).

If you have *accidentally downloaded* adware or spyware, and now you want to remove it, find out if the software has uninstall functionality. For example, you can remove Radiate's software by using the program downloaded from this company's website.

If you want to *scan your computer for spyware* , try Lavasoft's Ad-aware free program (which can be easily found via the Google search tool); This program can find and remove most stealthy software. Remember to update to the latest program.

Once you have a problem with the software, remove it without hesitation. If the program does not have uninstall functionality, try using Windows Add / Remove or other programs with similar features.

Please clean up the garbage DLL and the items on the left of the Windows Registry related software removed. Knowledgeable users can confidently do this manually, but it is better to use a reliable program to do so.
