

# Download XAMPP 8.0.2: Free local Web server

XAMPP was created by Apache Friends. It stands for Cross-platform (X), Apache, MariaDB (MySQL), PHP and Perl.

1. Free software
2. Version: 8.0.2
3. Update date: 02/26/2021
4. Platform: Windows

Download XAMPP 8.0.2 [here](#).

This development program acts as a web development server, providing services similar to other open source web servers, eg Apache server, MySQL database and PHP programming language. It also serves as an alternative to software stacks such as WAMP and LAMP.

## What are the uses of XAMPP?

XAMPP offers an impressive stack compared to the WAMP and LAMP packages. It comes with all the essential parts of a web server - primarily the Apache HTTP Server, MariaDB database, and an interpreter for scripts written in the PHP and Perl programming languages. The components of this software are actually similar to the actual web server implementation; This makes it easier to switch from a local test server to a live server.

The stack also provides Mercury Mail server, FileZilla, FTP server, and even Tomcat JSP server. You will find a status and security overview on your server, which will be reported through a launch log analyzer, like Webalize and phpMyAdmin. At the same time, it also provides quick installation speed. The download only takes 5 to 10 minutes.

This shows how much Apache Friends value user time and convenience. No additional configuration or add-on is required, as this is simply an official server that runs quickly and easily. To customize, go to the program's

control panel. You will see its simple and minimalistic interface. Here you can interact with all types of modules, view different PID numbers and edit configuration files.

## All-in-one development server

XAMPP's user-friendly interface and seamless user experience show that the tool is designed with developer requirements in mind. It also offers a bustling community of developers who can provide a solution to your concerns and are constantly updating the program.

### Advantages

1. Allows offline web development
2. Provide online support
3. The installation is quick
4. Offers multiple programs in one

### Defect

1. More suitable for experienced programmers
