

Dream League Soccer 2021: Tips to score goals and win every match

Dream League Soccer 2021 is a football management game that allows players to control the players, aiming for promotion in every tournament. Players will improve their squad by signing new players, while training to enhance the skills of existing players.

In addition, the game also offers different modes, including career and PvP modes, for players to confront each other in a fiery match.

The aim of the player in every match is to score as many goals as possible and win. Therefore, in this article, let's learn the professional scoring tips in Dream League Soccer 2021.

Manually select positions for the players

There are 3 buttons in the Team Management screen and the Roles button is where the player can choose the positions for the player, such as captain, corner kicker, penalty kicker,.

Players will need to manually select each player as there is no automatic option that will sort each player based on key attributes. Therefore, players will need to consider each player to make the best choice for each position in the team.

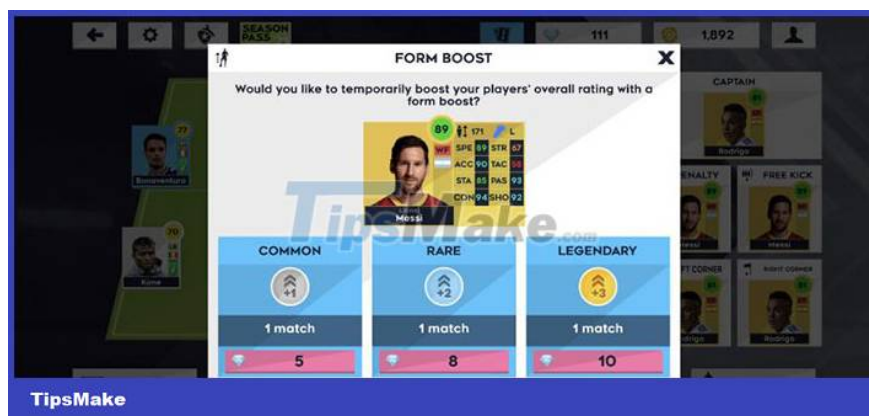

In general, free kick and corner kick players need to have good passing stats. Meanwhile, the penalty kicker needs to have a high shooting index. As for captains, DLS2021 requires no explicit attributes to consider leadership, so gamers should choose the one with the best overall rating. Choosing one of the best players in your squad as captain would be a safe approach.

Use boost sensibly

Gamers can use Common Form Boost (5 gems), Rare (8 gems) or Legendary (10 gems) to increase the player's score and overall rating by 1, 2 or 3 points respectively.

Players should only buy boosters to support the best player they have. Boosters should not be used for players with ratings between 60 and early 70, but should instead focus on players with ratings 75 and above.

The ideal time to buy a boost is right before an important match against an opponent of equal or higher level. Always remember to only buy boosts when absolutely necessary because DLS2021 has many other more useful things that require gems.

Some scoring tips

It won't be easy to find scoring opportunities in career mode at first and while playing Dream League Live you may encounter teams that are particularly good at blocking and stopping attacking players from getting in. Good chance in goal. But when playing career mode, people will find it pretty easy to get out of a chasing situation without being offside.

In the absence of a good chance to score, stay calm and look for another opportunity. It is very difficult to score from long distance, so focus on the closer areas, especially when the goalkeeper saves the ball successfully.

Gamers need to act quickly when the goalkeeper has successfully blocked on the first try. Get a second shot immediately before the keeper shifts his focus back.

Also, weaving in and out while approaching the goalkeeper is very effective, throwing them off balance and forcing the goalkeeper to think twice about where the ball might be headed. Just make sure not to do this move too close to the keeper, or it will be easy for the player to block the shot before it has a chance to hit the target.
