

DriverHub, a free application that helps to handle missing drivers

DriverHub is the application that provides the latest version of the official driver from the company to help users to solve the situation of unstable operation, hang up due to lack of driver problem, driver error caused.

DriverHub is the application that provides the latest version of the official driver from the company to help users to solve the situation of unstable operation, hang up due to lack of driver problem, driver error caused.

DriverHub is a completely free application, simple interface and easy to use.

DriverHub is compatible with Windows 7/8/10 and it is important that this application is completely free, there is no FREE version of PRO version.

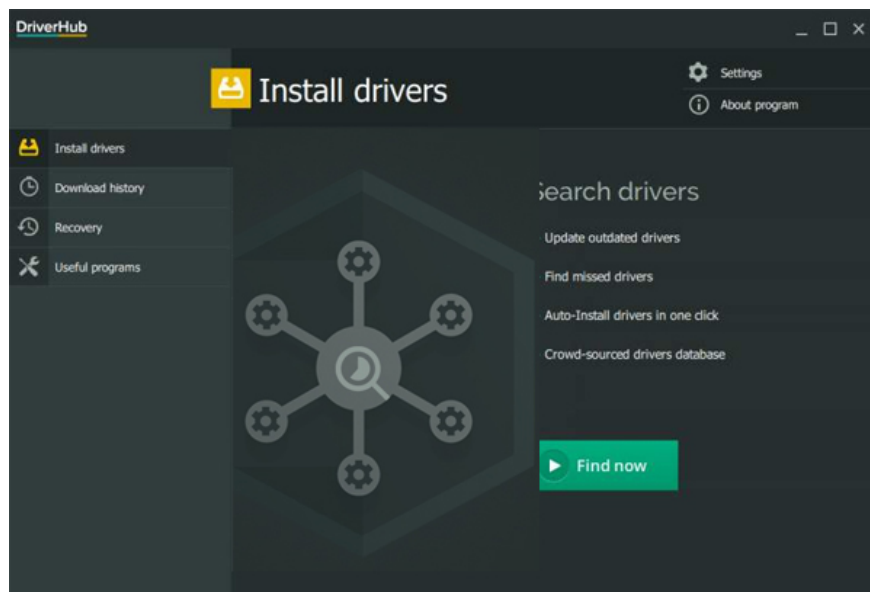

How to download and use DriverHub

Step 1: Visit the link below to download and install DriverHub application.

<https://www.drivhub.net/>

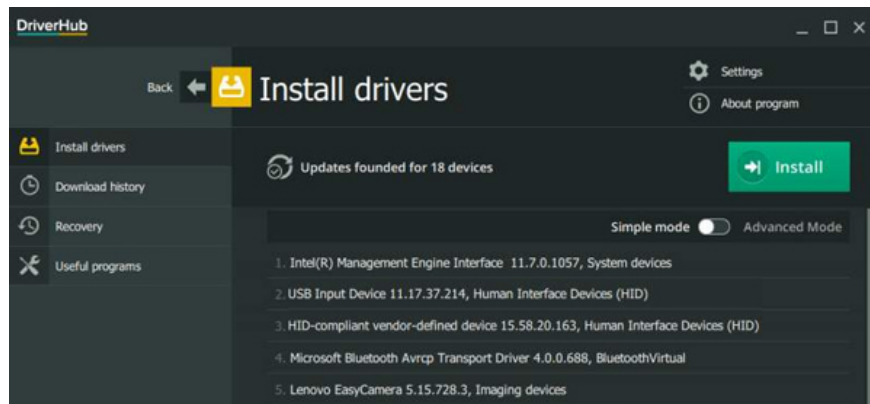

Step 2: Install.

Step 3: Open the application. Click **Find now** to start scanning the system and give a list of drivers to update.

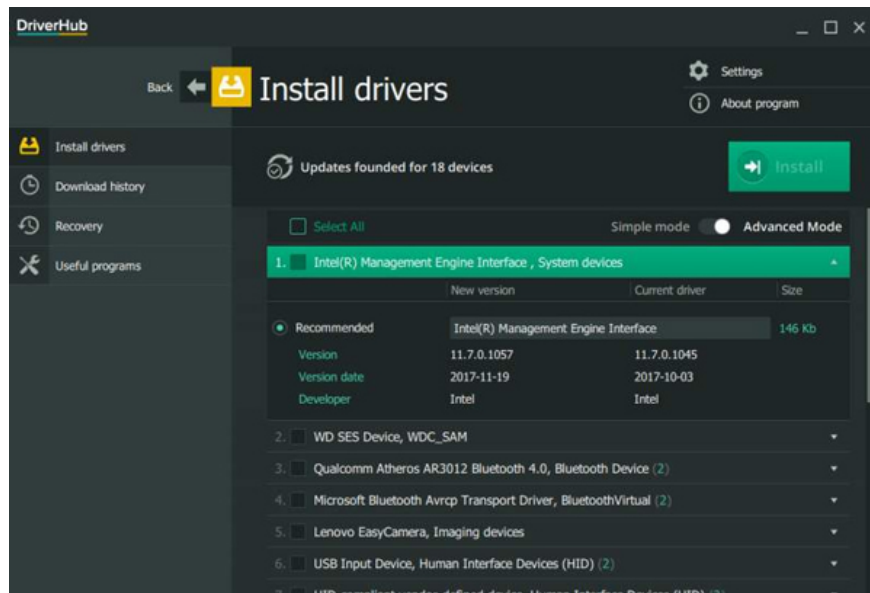

Step 4: After the scan is complete, a list of drivers will appear.

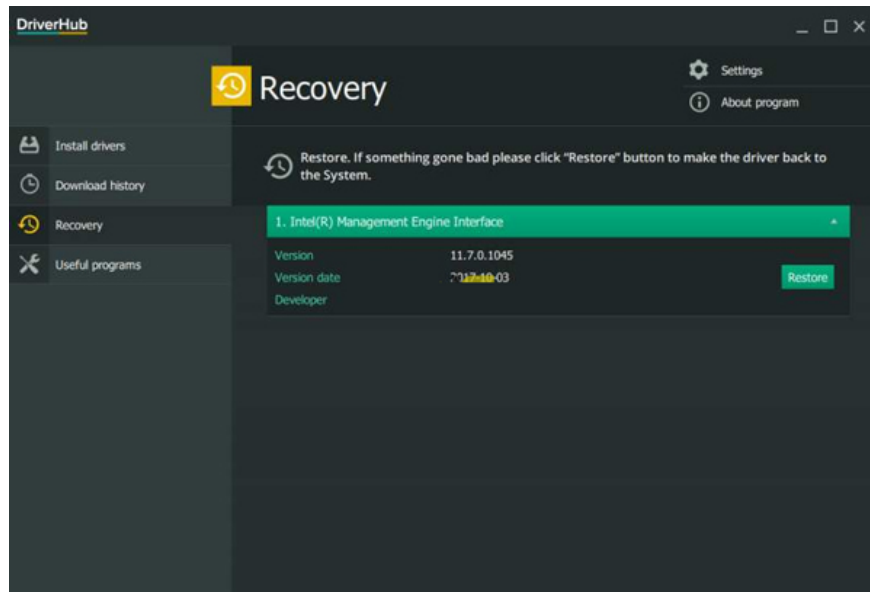

If you want to update all the drivers in the list, click the **Install** button.

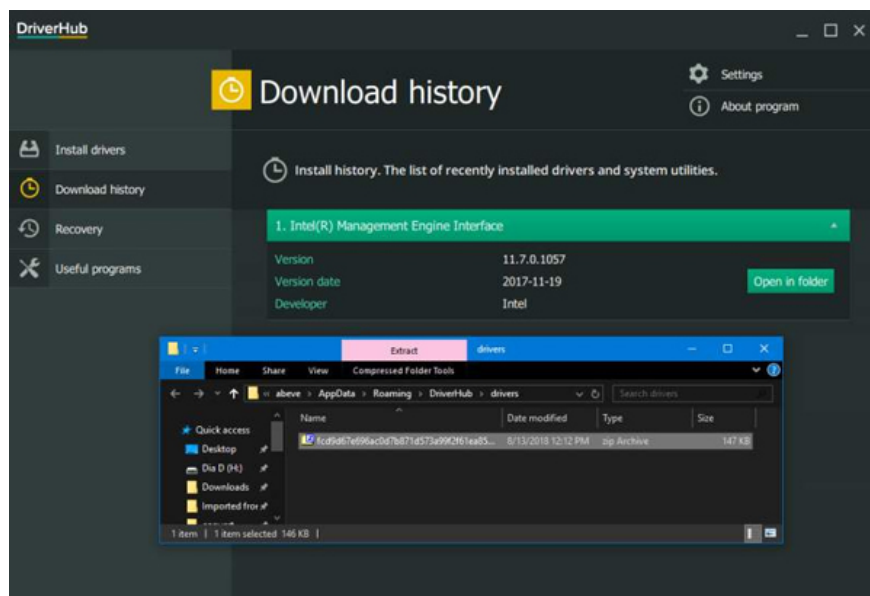

To select each driver you want to update, you switch from **Simple mode** to **Advanced mode** -> select the item to install -> click **Install** .

Step 5: To restore the old driver, you can click on the **Recovery** tab -> select the newly installed driver -> click the **Restore** item.

The drivers after downloading are saved on the computer, to go straight to the storage driver file, click the **Download history** tab -> select the installed driver -> select **Open folder** .
