

Eagle Prime, the heroic robot in a match against Japan, is currently up for sale on eBay starting at \$ 1

Eagle Prime is the robot that won the Great Robot War against Japanese rivals in 2017.

Eagle Prime is the robot that won the Great Robot War with its Japanese opponent in 2017. However, this robot's victory did not help MegaBots company escape bankruptcy. MegaBots had to sell its assets to cover its debts.

In a video posted on eBay for sale of the Eagle Prime robot, the giant fighting robot startup said, 'This is the end for MegaBots'.

MegaBots sells its 15-tonne "hero" on eBay for a starting price of just \$ 1. But until now, its price has been pushed up to \$ 50,000.

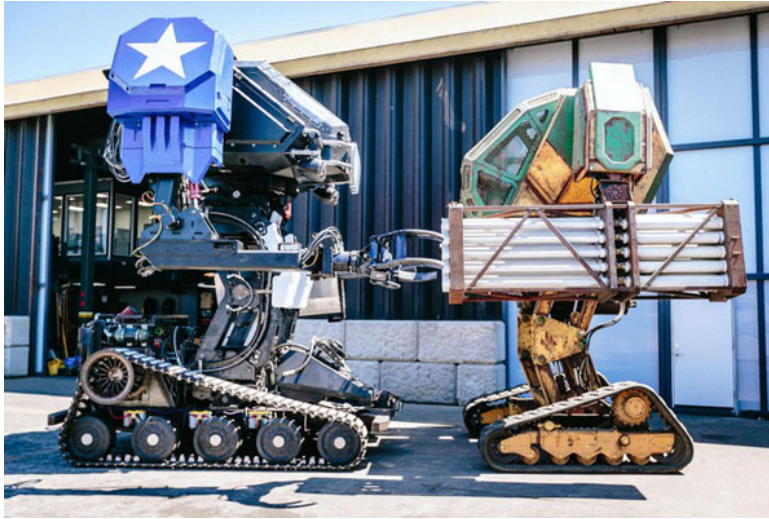

Robot Eagle Prime won the giant robot competition against Japanese opponent.

1. Great Robot War: America wins Japan

According to MegaBots, to create the Eagle Prime fighting robot, the company has spent \$ 2.5 million (mainly through crowdfunding).

The description of this particular item says: 'The robot still works but because the company went bankrupt, it was auctioned off.'

The winner of the eBay auction will have to pay for the delivery. For a 15-tonne load, shipping costs from the US East Coast to the US West Coast will cost between US \$ 4,000 and US \$ 17,000.

Eagle Prime and the "twin" Iron Glory are both developed by MegaBots.

Still, this could be a good investment because, according to MegaBots, an Eagle Prime show at home could bring in around \$ 7,000. But with MegaBots, this business plan is no longer feasible because they ran out of money and were forced to sell the company's assets to return to the bank before filing bankruptcy papers.
