

Easy guide to changing colors in Photoshop for beginners.

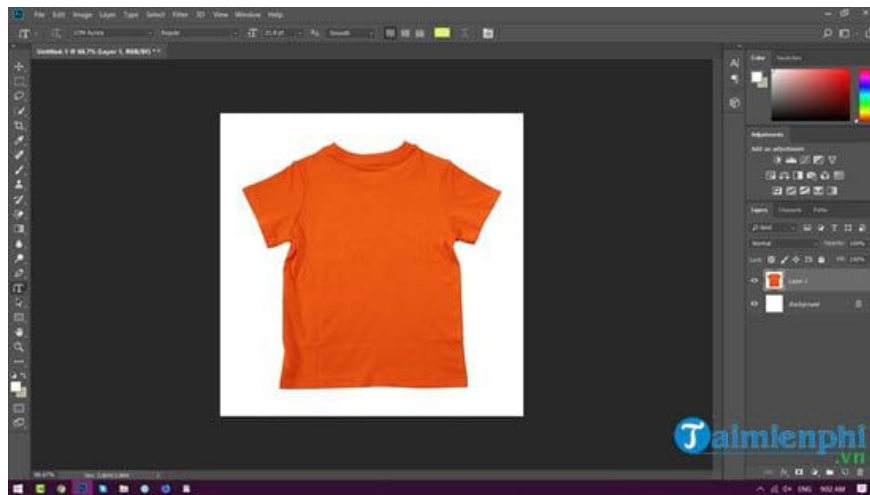

Changing colors is one of the most common operations when editing photos in Photoshop. With tools like Replace Color and Hue/Saturation, you can easily change the color of clothes, hair, or objects in just a few simple steps.

Photoshop offers many tools to quickly change image colors. You can use Replace Color or Hue/Saturation to easily change the color of clothes, hair, or objects.

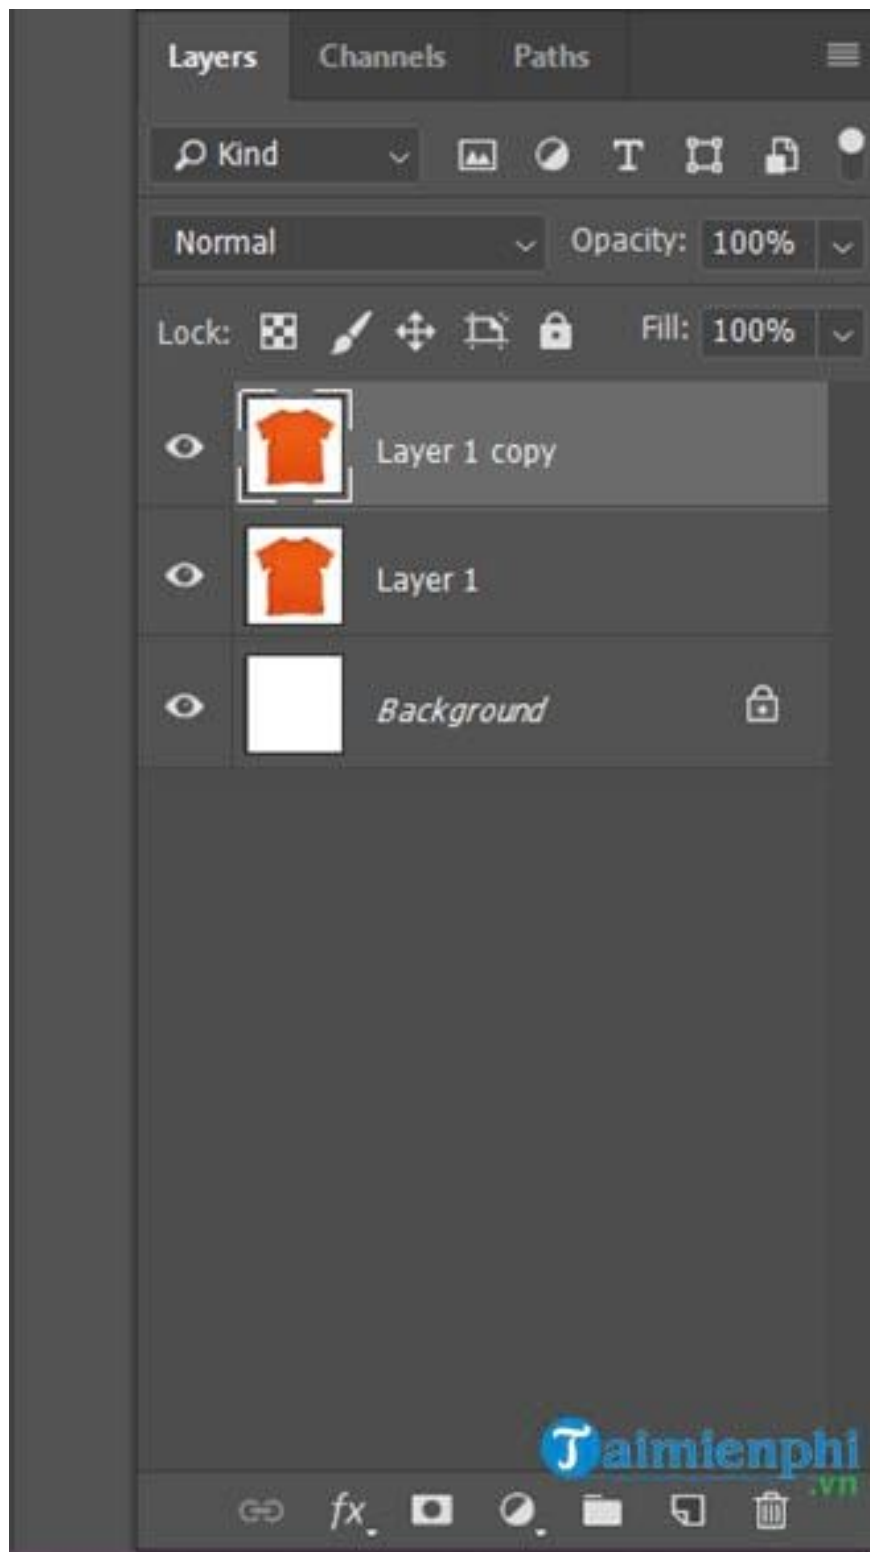

How to change colors in Photoshop

First, you need to download Photoshop to your computer.

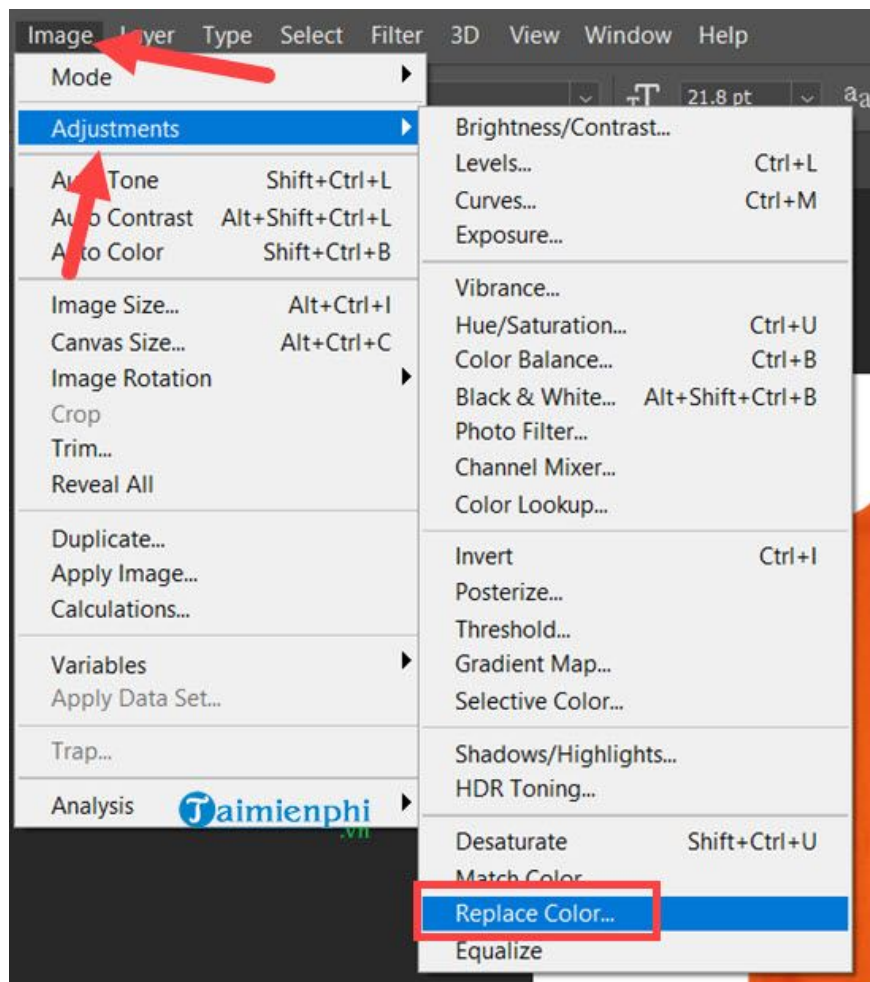

Let's say, as in the image, we have an orange shirt. Our task now is to change its color in Photoshop to any color we like.

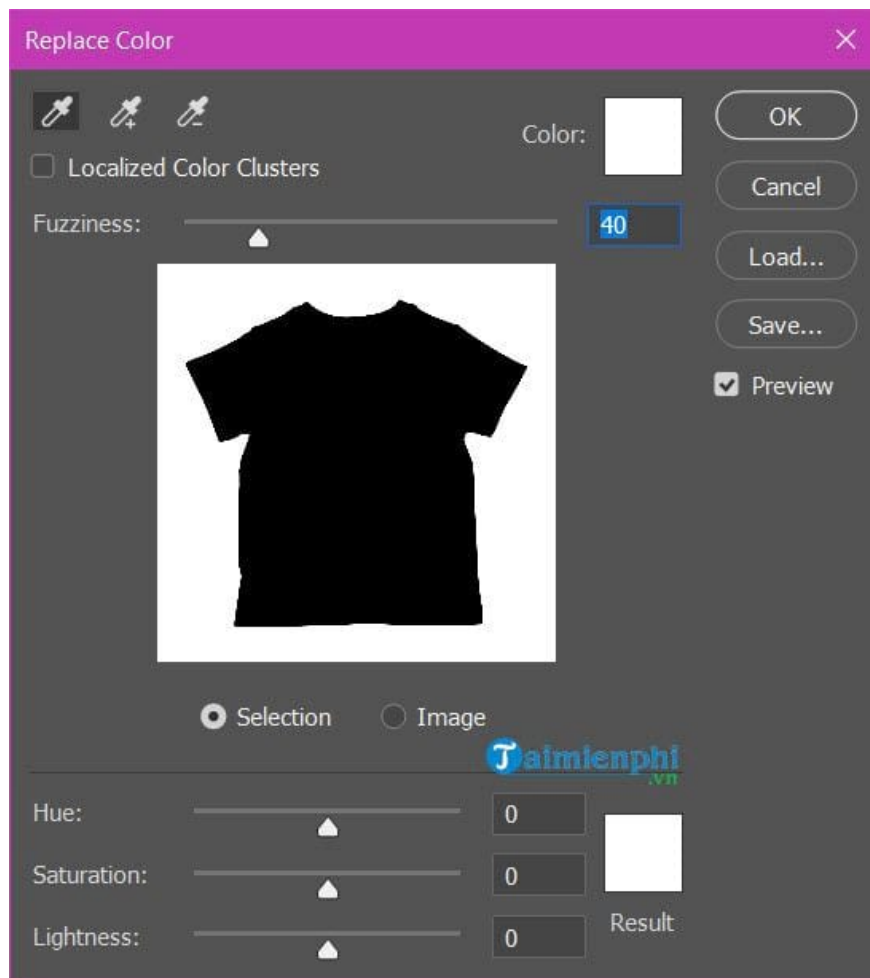

Step 1: First, press **Ctrl + J** to duplicate that layer. This is an operation you should use frequently when performing any task.

Step 2: On the copied layer, select **Image > Adjustments > Replace Color** from the toolbar.

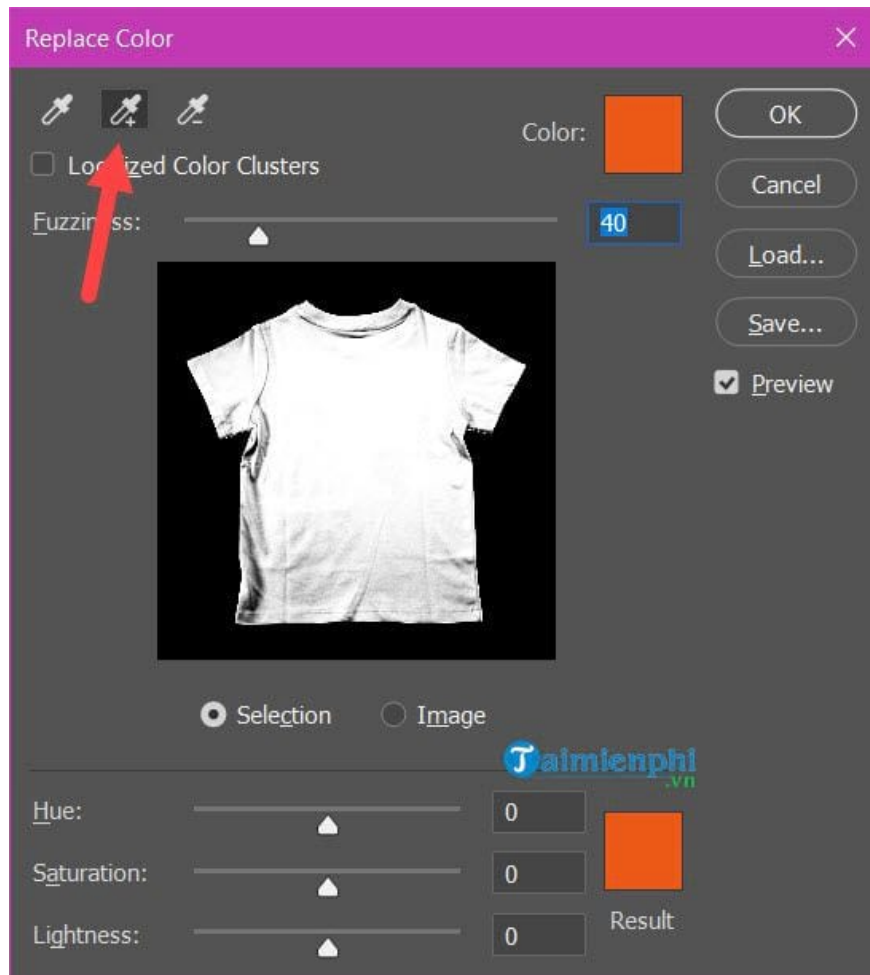

Step 3: The **Replace Color** feature allows you to quickly change the color of your selected object.

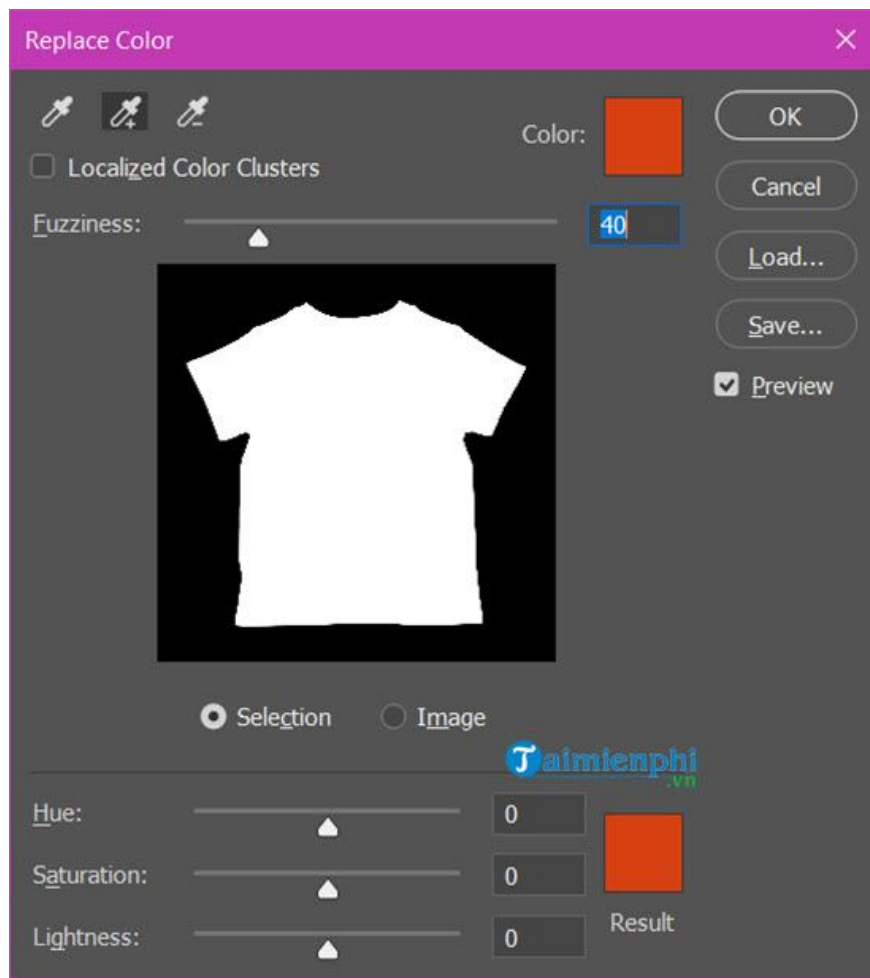

Step 4: To use this feature, click on **the pen icon** as shown below, then click on the area you want to change the color of.

Step 5: Then, tap **the "+" sign** next to it and continue selecting the remaining areas on the shirt, the dark areas.

After making the areas on the shirt almost entirely white, as shown in the image below, we can begin selecting colors.

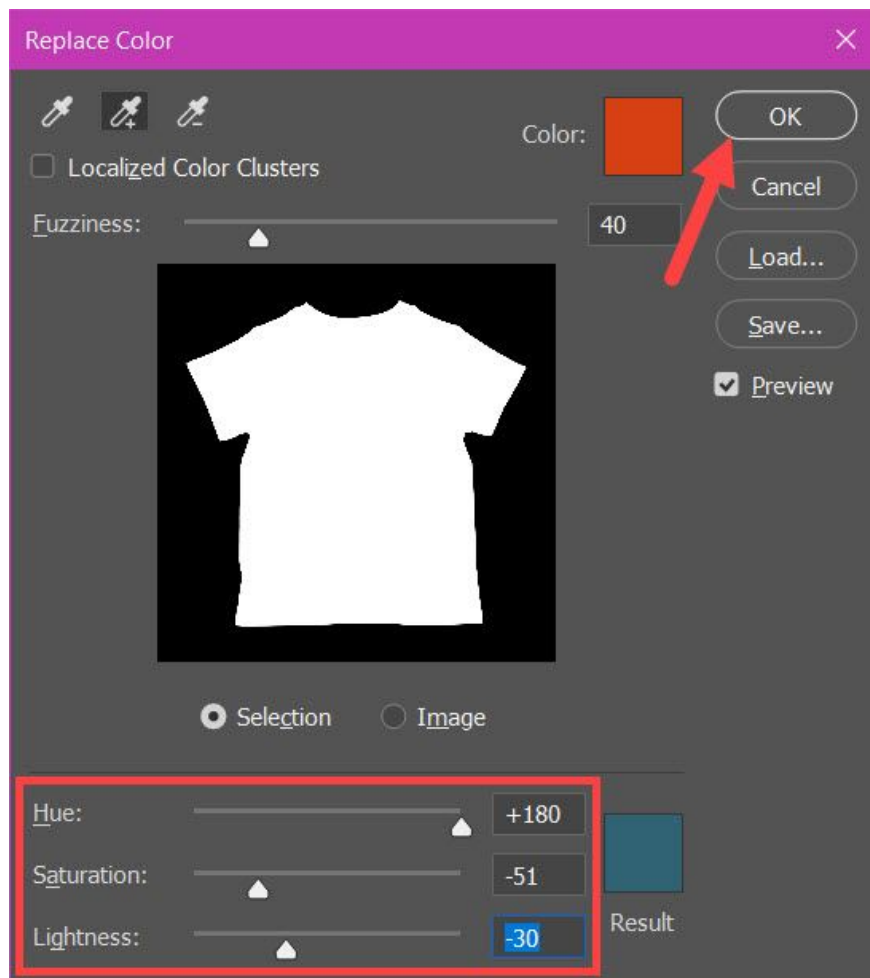

Step 6: Below are 3 toolbars that help you adjust the colors fully with 16 million basic colors.

- **Hue** : Scroll left or right to select the appropriate color.

- **Saturation** : Used to adjust color saturation; shifting to the right will make colors more vibrant, while shifting to the left will make them darker.

- **Lightness** : Adjusts the brightness of the color; scrolling to the right will make the color brighter, and scrolling to the left will make it darker.

Step 7: Finally, after confirmation, we will return to the main screen with a new color; here, Free Download has changed from orange to navy blue.

Let's compare the before and after photos of color changes in Photoshop to see the difference.

With just a few simple steps, you can quickly change colors in Photoshop without needing advanced skills. This technique makes it easy to change the color of an object, suitable for many purposes such as product photo editing, graphic design, or artistic creation. If you want to learn more, try combining it with color correction in Photoshop, color selection, or changing image colors to enhance your proficiency with this software.
