

Edupia AI

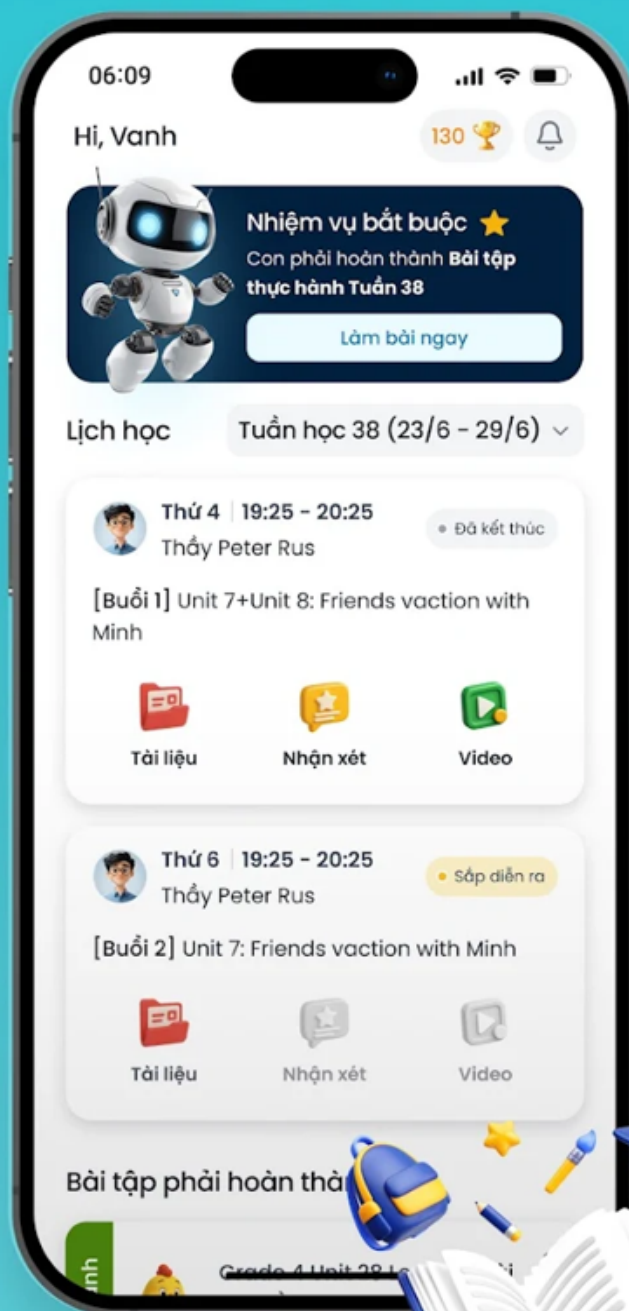

Edupia AI: The AI ??Talk assistant helps children develop native-like speaking skills and offers a personalized CERF learning path to help them achieve comprehensive English proficiency!

Edupia AI (Edupia: AI Class) – a strategic product of Educa Corporation – has officially set a new standard for language learning at home. By integrating advanced AI models, the application is not only a repository of lessons but also acts as a virtual native-speaking teacher, accompanying children through each syllable.

If you're looking for a solution to help your child confidently communicate and achieve a score of 9+ in class, **downloading Edupia AI** is the top choice to make that goal a reality.

Technological breakthroughs in Edupia AI Class

Bài tập phải hoàn thành

Grade 4 Unit 29

What sets Edupia AI apart is its technology ecosystem that supports learners, bridging the gap between online learning and learning at international schools.

1. Exclusive I-Speak speech training technology

The **I-Speak** system uses artificial intelligence to recognize speech and analyze it in detail, down to each syllable. When children practice speaking, the AI will immediately:

1. **Accuracy rating:** Direct comparison with the pronunciation of a native-speaking teacher.
2. **Error detection:** Clearly indicate mispronounced words using visual color coding.
3. **Correction guide:** AI suggests tongue positioning and mouth shape to help children improve their natural reflexes like native speakers.

2. AI Talk & AI Speak Virtual Assistants

The **AI Talk** feature creates a rich simulated communication environment. Children can immerse themselves in real-life situations (traveling, shopping, making friends) to chat with the robot. The **AI Speak** virtual assistant operates 24/7, helping children practice their listening and speaking skills every day without feeling pressured or bored.

3. Adaptive Learning Pathway

Based on Big Data, Edupia AI automatically analyzes each student's strengths and weaknesses after each lesson. From this, the application suggests individualized supplementary exercises, ensuring children make significant progress according to the **CERF (European)** competency framework and the Ministry of Education's curriculum.

Key features you can't miss.

Lịch học – Màn hình chính của ứng dụng

1. **Livestream interactive classes:** Learn live with top-rated school teachers and foreign teachers. Children can participate in Q&A sessions, group discussions, and competitions to win trophies right during class time.
2. **Interactive environment:** Children not only watch videos, but also "touch" the lessons through intellectual games, helping them memorize vocabulary three times more effectively than with traditional methods.
3. **Smart learning reports:** Parents receive detailed weekly results via the app or Zalo, easily tracking their child's progress.
4. **Extracurricular Activities & Competitions:** Participate in major competitions such as "Speak Up with AI Speak" or "English Champion Festival 2026" to gain experience and win attractive prizes.

Technical specifications and official download link

Criteria	Detailed information
----------	----------------------

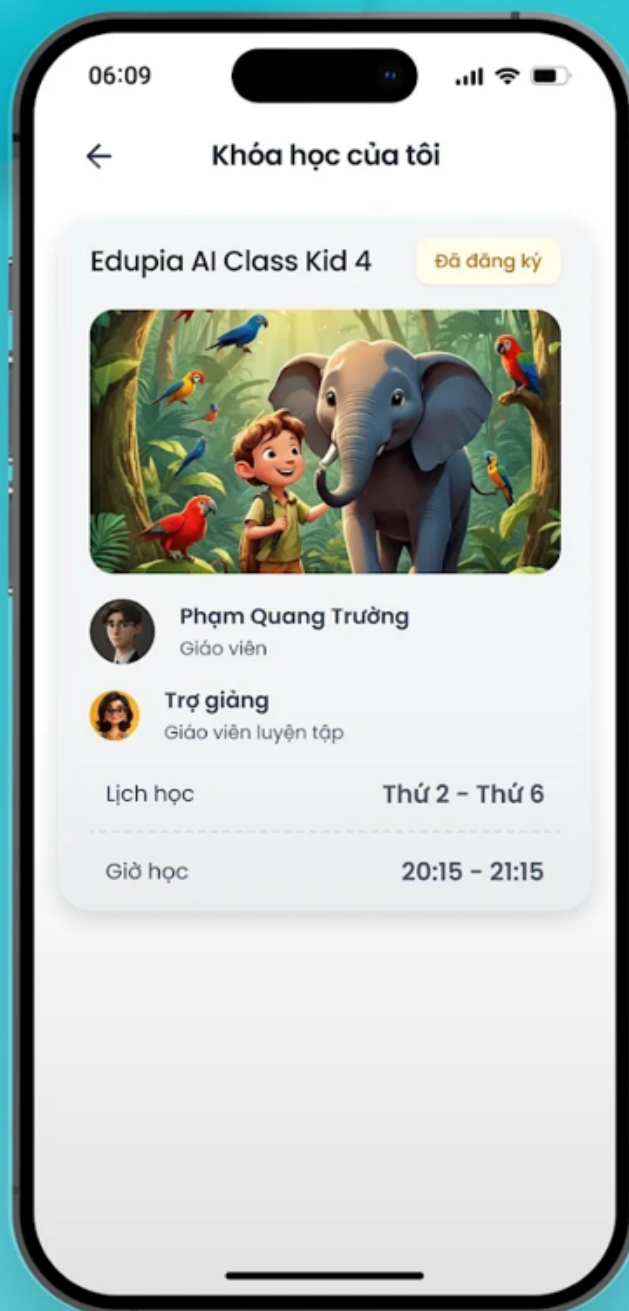

Developer	Educa Corporation
Support platform	Android 5.0+ / iOS 12.0+ / Computer (Web)
Core technology	I-Speak, AI Voice Recognition, Big Data

Frequently Asked Questions (FAQ)

Tham gia các khóa học trực tuyến

What age group is Edupia AI Class suitable for?

1. The app is optimally designed for students aged 6 to 15, including both elementary and middle school students.

Can a child with no prior English knowledge learn?

1. Absolutely. The AI system will start from the most basic levels, combining vivid images to help children become familiar with the language naturally, just like learning their mother tongue.

Is tutoring required when using Edupia AI?

1. The system includes built-in livestream sessions with teachers and teaching assistants. Additionally, AI acts as a "personal tutor," reminding and guiding children with their studies every day.

Conclude:

Edupia AI is not just a learning app, but a technological "lever" that helps Vietnamese children confidently reach out to the world. With the support of artificial intelligence, English will become a joy and a passion for every child.
