Automatic Call Recorder works in the background during recording and performs automatic recording without making photos to your call. Especially in the latest version of the application has integrated cloud storage services Google Drive or Dropbox, enabling users to download those recordings and synchronize the recordings at all devices.

2. Record phone conversations with TapeACall Pro:

1. Download TapeACall Pro for Android
2. Download TapeACall Pro iOS

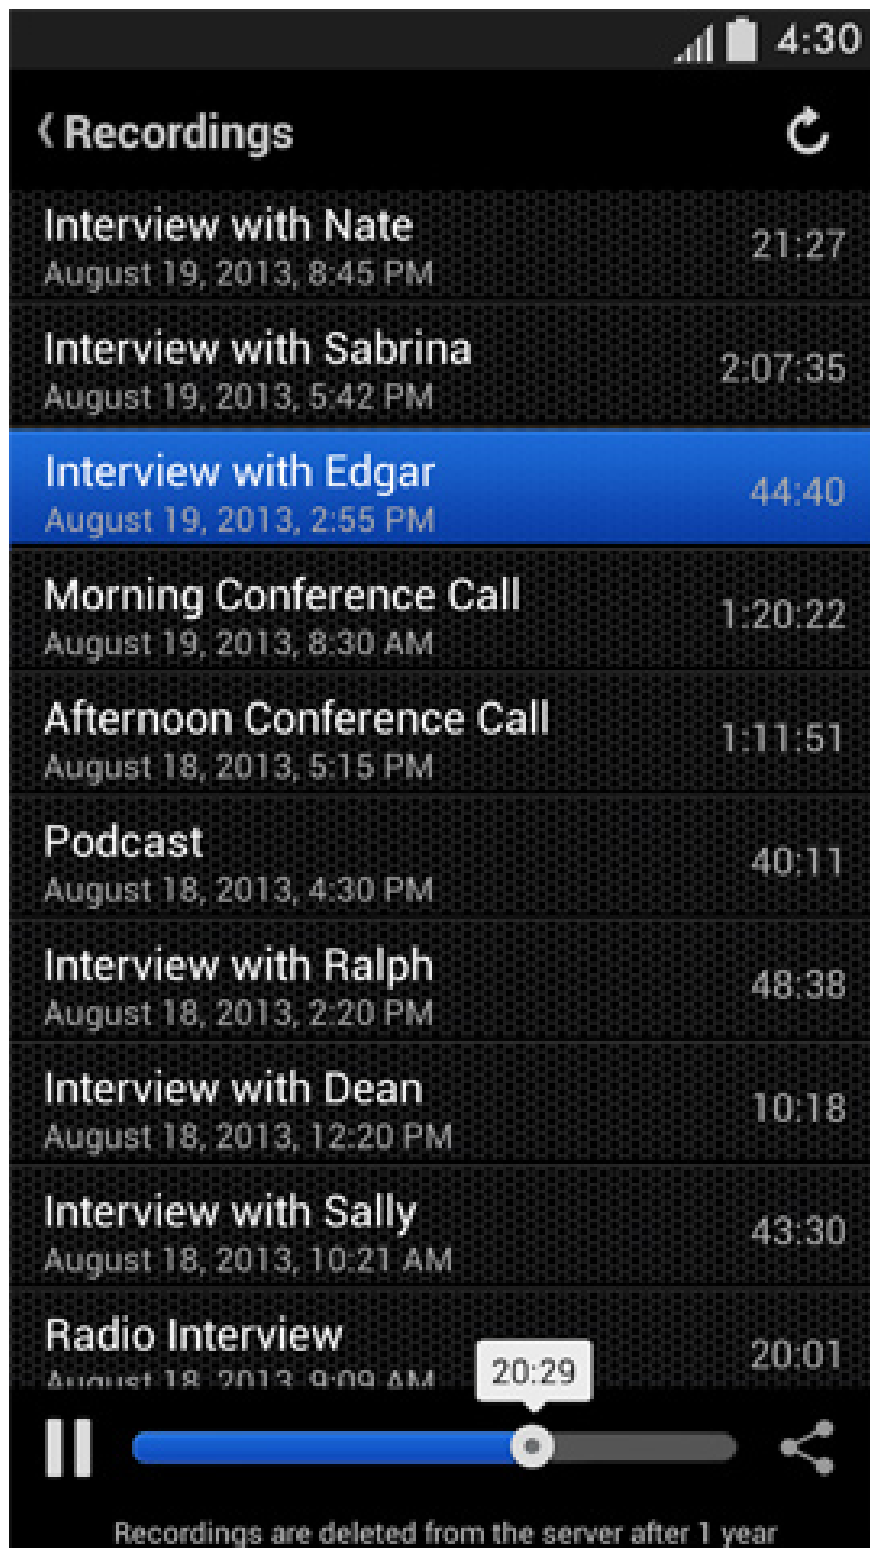

Recording phone calls on TapeACall Pro application will be stored in mp3 audio file format, making it easy to copy or transfer recordings to different devices. The interface of TapeACall Pro will start with a red button in the middle of the screen and we just need to click on it to conduct a call recording. The application will conduct recording by 3-way method that is the receiver, caller and server of TapeACall Pro.

A 3-WAY CALL IS MADE...

TAP "MERGE"

3. Call recording application Call Recorder:

1. Download the Call Recorder Android application
2. Download Call Recorder iOS

The application is built-in to the device's call list system, enabling direct recording without users having to perform any other setup operation. The recording history of the app's calls will be sorted by date, making it easier to find the recording. In particular, Call Recorder also supports creating passwords for recordings to increase the security for recorded personal conversations. With the Pro version, the application also supports downloading recordings to Dropbox or Google Drive.

Readers can refer to how to use the Call Recorder service in the [Android Call Recorder](#) article with Call Recorder - ACR.
