For many people, surfing the net reading electronic newspapers has become an indispensable need every day. However, if you sit too long in front of a computer screen or a phone to read the news, it will cause you to have a health impact (eye disease, long-term sitting without movement) . That's one of the reasons software The electronic newspaper has become a newspaper.

Describe the electronic reporting system of the newspaper saying ViNAS

ViNAS electronic newspaper variable system of authors comes from iSolar Innovative Research and Solution Co., Ltd belonging to the National Information Technology Institute, allowing online media organizations to synthesize and adjust edit into an audio file easily and quickly for each of your articles, integrating the date next to each electronic article.

The system also helps users to update the latest articles to save time. Not only applications on the desktop, the system also has applications on mobile phones to best serve the needs of readers to capture news.

According to the authors, the software is divided into two separate approaches, but support and complement each other. Specifically, with the enterprise approach, the system provides a demo web and a commercial application

on the PC. This application allows businesses to extract article content via a URL, standardize the text and ultimately create standard and archived audio files.

This application also allows businesses to directly edit the text after going through the standardization step, in order to create a complete document and make a standard input for the audio file creation process. The main purpose of this commercial product is to help businesses create sound files for each of their articles.

As a user-oriented approach, the pharmacy system is built into two applications, one for PC and one for mobile. Both applications are available for free.

It is not simply about saving money and labor but also being time-efficient, when the press needs to be timely and updated in providing news and synchronization in the processing of audio. recording There is nothing worth saying about making an article, waiting for the label to finish. However, when more news is posted and updated, waiting time becomes a real problem. And at this time, the electronic newspaper variable system says ViNAS will become an effective support tool for the press units.

The system is considered as a support tool for online newspapers and users in expanding the form of information dissemination. Compare the pay to hire a record label for each record, with the purchase of a commercial and self-employed product that can be used automatically, easily and quickly for creating audio files. of all the articles, how easy it is to realize how economically effective it is for businesses.

As for the public, they can fully use the system anytime, anywhere, just have mobile or desktop, laptop connected to the Internet, the latest information will be automatically updated. The system is like an automated, cheap, and fast recording company. It is even a signal light whenever new news is available to users of a desktop or a mobile browser.

Attending the Vietnam Talent Award in the IT field, under the prospective IT group, "*Electronic newspaper variable system saying ViNAS*" is one of 14 products in the 2012 Final Report. say, products are highly commercialized because they can support business organizations quickly, easily, automatically turn electronic newspapers into newspapers, help journalists create their own sound files for each of your articles.

Even so, the product still has some shortcomings that need to be overcome in the coming time as it cannot standardize the reading with difficult and multi-word words. Standardization cannot achieve absolute accuracy and still requires human intervention. In addition, since all users' website requests are for the server to handle, it can lead to server bottlenecks, such as traffic congestion, overloading queries from iSolar browser. Then the applications support audio streaming, audio files are located on the server, so it easily leads to transmission overload .
