

# Elon Musk released 8 photos of the first human journey to Mars in the future

Photos of SpaceX's journey to launch the newly launched Space Mars first passenger will help us better visualize future space travel.

Photos of SpaceX's journey to launch the newly launched Space Mars first passenger will help us better visualize future space travel.

1. Crazy idea: Create an atmosphere for Mars
2. How terrible is the rocket that will bring people to Mars?

NASA's 39A historic missile launcher at Kennedy Space Center in the state of Florida, USA will be the start of a trip to Mars. This is the place where the mission Apollo 11 performs the mission of bringing the first astronauts to the Moon.

In the picture, we can see the tiny passengers moving on the giant rocket.

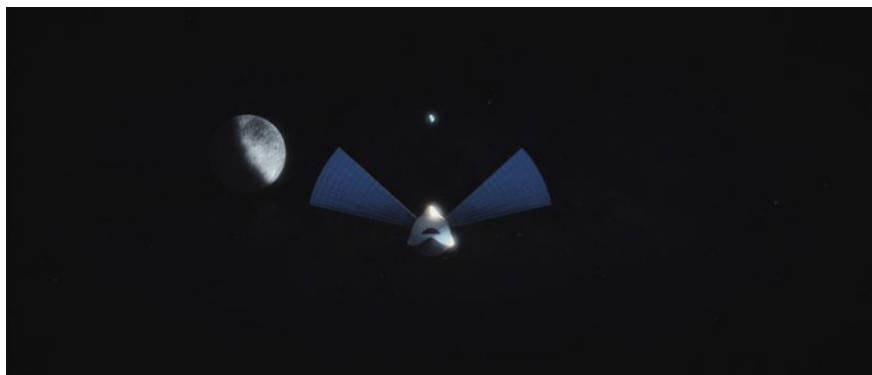

From the 39A launcher, the giant rocket will be launched into space with the goal of Mars. This is a picture of a rocket launch from 39A in the future that SpaceX wishes to see.

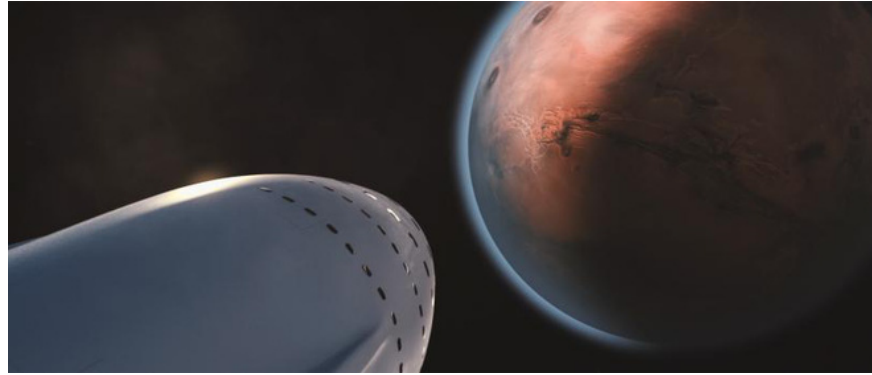

The rocket's propulsion part will separate from the spacecraft and then return to Earth where the propeller refueling vessel is added.

When entering space, the missile will connect to the spacecraft to refuel, this process will take place three to five times before the ship successfully landed on Mars.

As soon as the refueling process is completed, the refueling ship will return to Earth, while the spacecraft will begin to depart for Mars. As soon as the spacecraft leaves its orbit to go to Mars, solar antennas will be used to power the ship's deck.

It will take a few weeks for the spacecraft to reach Mars. According to Musk the spacecraft will arrive in Mars in about 80 to 150 days. He hopes this period will be reduced to only 1 month in the distant future.

The spacecraft will land vertically on the surface of Mars.

This may be the scene that the first person to set foot on Mars sees. According to Musk, after the first trip to Mars, we will take between 40 and 100 years to build a self-reliant city on the red planet.
