

Elon Musk's brainwave technology can cure autism?

Tech billionaire Elon Musk once again made the world stir with his statements.

Tech billionaire Elon Musk once again made the world stir with his statements about the amazing prospects of brainwave technology that his startup Neuralink is pursuing.

Neuralink is a startup that operates primarily in the field of technology, but the technology they are pursuing may change the lives of humankind in the future, which is interfering with brainwaves to solve. problems that have always been 'forbidden' for both technology and medicine, such as allowing people to connect to computers via the brain, uploading or downloading ideas. ideas, data and information only through thought.

Not stopping there, in a recent technology talk show, Elon Musk announced that his Neuralink technology would 'neatly solve' certain problems related to brain dysfunction, such as autism, schizophrenia, dementia (everyone suffers from dementia at certain points by age).

This statement by CEO Tesla immediately became a hot topic on many major technology forums. There have been many questions posed for the above statement, in which the public is particularly interested in the prospect of curing autism and schizophrenia mentioned by the billionaire.

In fact, autism is not a disease and therefore it will not be cured or completely eliminated. In addition, there is no indication that attaching a chip to the skull and connecting to a processor to communicate with complex computing devices like the current method of Neuralink would be a method. Effective treatment for neurological conditions such as schizophrenia.

Neuralink technology works on a combination of an external processing computer system, a Bluetooth transmission based on brain signals and a chip implanted into the skull. These modern devices, if they work according to plan, can help people control and perform tasks on smartphones and computers just through

thinking without having to use hands and feet. or any other body part.

So how can this become an 'autism resolution' or 'treatment for schizophrenia' tool? This is probably only known to Elon Musk and his associates, and it is still too early for this billionaire to reveal valuable information.

Regardless of the actual results, Elon Musk and his collaborators are always worthy of praise. All for a better life!
