

Enable JavaScript in browsers

All modern browsers come with support available for JavaScript. Often, you may need to manipulate to enable or disable this support. This chapter explains the procedure to enable and disable JavaScript support in your browser: Internet Explorer, Firefox, Chrome, and Opera.

All modern browsers come with support available for JavaScript. Often, you may need to manipulate to enable or disable this support. This chapter explains the procedure to enable and disable JavaScript support in your browser: **Internet Explorer, Firefox, Chrome, and Opera** .

JavaScript in Internet Explorer

Here are simple steps to enable or disable JavaScript in IE:

Select **Tools -> Internet Options** from the menu.

Select **Security** tab from that dialog box.

Click to select **Custom Level** .

Drag the mouse wheel until you see **Scripting option** .

Select *Enable* under **Active scripting** .

Finally click OK and exit.

To disable JavaScript support in your IE, you need to select the **Disable** button under **Active scripting** .

JavaScript in Firefox

Here are the steps to enable or disable JavaScript in Firefox:

Open a new tab, write **about: config** in the address bar.

You will then see a warning dialog. Choose **I'll be careful, I promise!**

You will then see a list of **configure options** in your browser.

In the search bar, write **javascript.enabled** .

Here, you will find the option to enable or disable JavaScript by right-clicking on the value of that option, selecting **toggle** .

If javascript.enabled is true, it changes to false with pressing **toggle** . If javascript is disabled, it activates when you click toggle.

JavaScript in Chrome

Here are the steps to enable or disable JavaScript in Chrome:

Click on the menu at the top right of the browser .

Select **Settings** .

Click on **Show advanced settings** at the bottom of the page.

Under the **Privacy** area, click the Content settings button.

In the "JavaScript" area, select "Do not allow any site to run JavaScript" or "Allow all sites to run JavaScript (recommended)".

JavaScript in Opera

Here are the steps to enable or disable JavaScript in Opera:

From the menu, select **Tools -> Preferences** .

Select the **Advanced** option from the dialog box.

Select **Content** from the listed items.

Select **Enable JavaScript** checkbox.

Finally click Ok and exit.

To disable JavaScript in Opera, you should not select **Enable JavaScript checkbox** .

Warning about Non-JavaScript browsers

If you have to do something important using JavaScript, then you can display a warning message to users by using tags

.

You can add a **noscript** block directly after the script block as follows:

```
Sorry.JavaScript is needed to go ahead.
```

Bây giờ, nếu trình duyệt của bạn ngừng hoạt động không hỗ trợ JavaScript hoặc JavaScript không được kích hoạt, thì thông báo này sẽ hiển thị trên màn hình.
