

# Ensure safety when surfing with McAfee SiteAdvisor

Web browsers such as Chrome, Firefox ... have a warning feature when users access unsafe websites. However, using a dedicated software to do this will be more secure. McAfee SiteAdvisor is one of them.

**Web browsers such as Chrome, Firefox . have a warning feature when users access unsafe websites. However, using a dedicated software to do this will be more secure. McAfee SiteAdvisor is one of them.**

McAfee SiteAdvisor is a software that can analyze and identify ' *dirty* ' and unsafe websites to alert users before they visit. The software also allows users to block unauthorized access to websites that are considered unsafe, in case the outsider arbitrarily uses the computer to access these websites, despite the software's warning.

Compared to similar tools with the website's security warning function, McAfee SiteAdvisor is able to identify and evaluate large and fuller websites.

By default, McAfee SiteAdvisor costs 19.95 USD for 1 year. However, McAfee has a promotion that allows users to use it for free for 1 year.

- First, download the special promotion version of McAfee Site Advisor [here](#).
- Access [here](#), fill in the registration form and click " **I Agree** " button to create a McAfee account.

*Note : The password you create must have at least 1 digit number to be accepted.*

### Create an Account

If you're a new user, complete our customer profile form below (all fields are required).

Once you have created an account, McAfee remembers your information to help simplify any future orders. Click the I Agree button below to create your account now and to continue with your order. You will have an opportunity to review and confirm your order before your credit card is processed. [Need help with your purchase?](#)

If you already have an account, please [log in now](#) to continue.

We do not share your information with anyone without your consent. [Read our Privacy Policy](#)

By clicking "I Agree" below, you are indicating that you have read and agree to the [McAfee End User Licence Agreement](#) and [McAfee Identity Protection Membership Agreement](#)

- Install software. In the first step, you will be asked to enter the registered email and password above. Click **Next** to continue and complete the installation process.

When installing, you should turn off all open web browser windows.

After installation, McAfee SiteAdvisor Plus button will appear on the web browser interface. Currently the software only supports Firefox and Internet Explorer, in case of using Google Chrome, you can install the free McAfee SiteAdvisor add-on here.

When conducting searches on search engines such as Google, Bing, Yahoo! ., McAfee SiteAdvisor Plus will automatically analyze and evaluate the results returned, thereby indicating whether the websites are safe or not. .

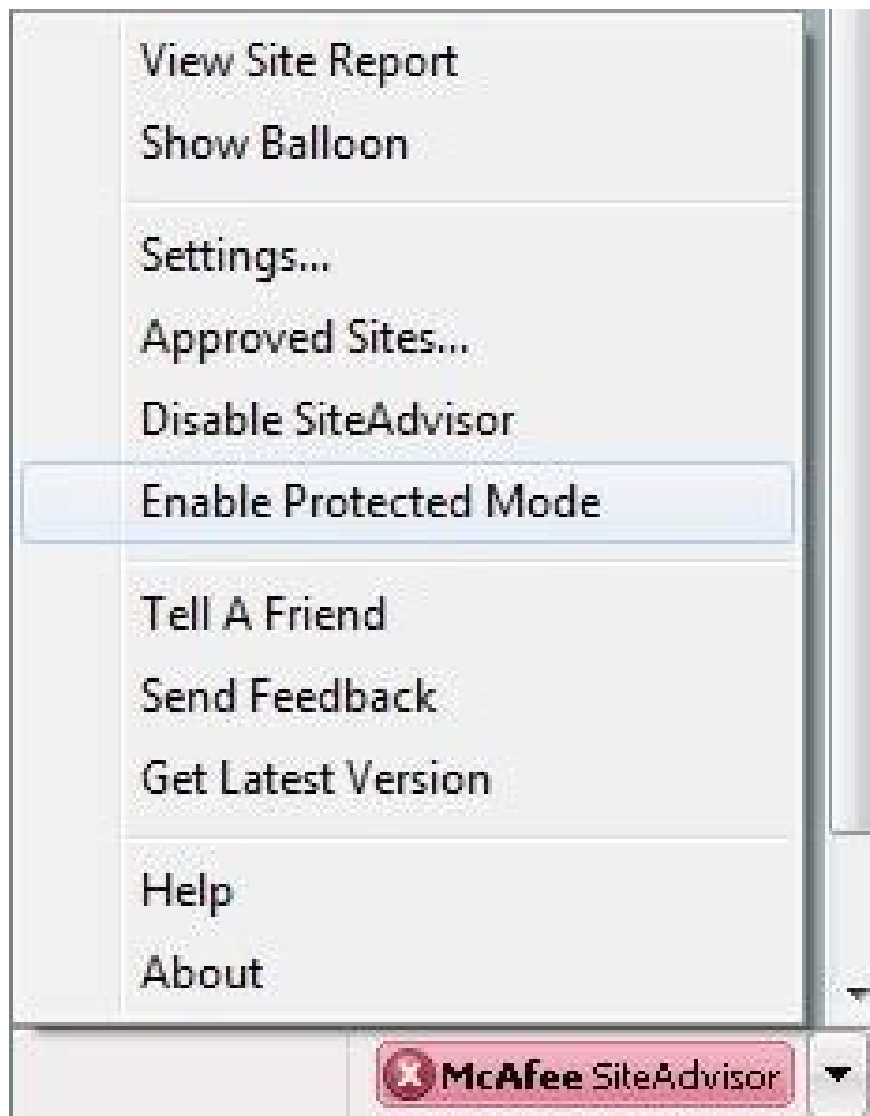

The safety of websites is evaluated based on the website content and the linked pages placed on that website. The software also classifies safety levels according to colors, with green being safe, yellow being alert and red being extremely dangerous.

However, if you wish, you can still access websites that are considered dangerous. Then, the software will immediately alert.

To ensure safety, you should use the software to block access to websites that are considered dangerous or fraudulent . To do this, click on the arrow icon of the browser software, select " **Enable Protected Mode** ".

A dialog box appears, asking you to create a password to protect. The " **Password Hint** " section will give you a hint, just in case you forget your password after initializing it.

Enter and confirm the password and click **OK**.

Now, when accessing the websites that are warned, you will be redirected to McAfee's intermediary page, and asked if you really want to access this website. If you want to ignore the warning, click the " **Override this warning** " button, then enter the above initialized password to access the website.

zcrack.com may be risky to visit according to McAfee.

**Why were you redirected to this page?**

When we visited this site, we found it exhibited one or more risky behaviors. SiteAdvisor Plus Protected Mode is enabled, which shields your computer from interaction with risky sites.

[Override this warning](#)

This will ensure that no one is allowed to use the computer to access unsafe websites, avoiding the risk of infection without your knowledge. In addition, this feature also prevents the system from being automatically transferred to 'dirty' websites in case the computer has been infected before.

Not only checking the cleanliness of links from search results, McAfee SiteAdvisor Plus also checks incoming links via email or chat programs.

McAfee SiteAdvisor Plus is the perfect tool to protect users safely in an uncertain Internet environment.
