

Error charging iPhone battery lagged percent - Causes and solutions

The article provides the cause of the iPhone battery charge error is down percent. Instructions on some ways to fix the percentage drop error when charging iPhone battery.

While using the phone, sometimes you will experience bad battery condition. This article we will introduce to you the cause as well as how to fix the lower the battery charge, the less charged the battery is on the iPhone . Let's find out in our article.

1. Causes of battery charge is lagged in percentage on iPhone

The battery has a bottle

The most common cause is because your battery has been used for too long, or your battery is not of good quality, or is due to poor usage habits such as using while charging, plugging in the phone overnight or charging. always leave the battery in a state of exhaustion, . Causes your battery to bottle and display parameters are no longer correctly notified each time you charge.

Software conflict

Software conflict is one of the most common errors encountered on the iPhone, this error is often encountered when downloading incompatible applications and software, causing software conflicts, causing iPhone to freeze,

drain the battery, exit the application, hang up while in use, do not go to the screen, power down or not receive calls and messages, .

The charger is not genuine

Using the device's original charger incorrectly may cause the battery to recharge longer, and cause damage to the phone battery. So, when choosing a charger for yourself, you need to pay attention to carefully check.

Battery charge is incorrect

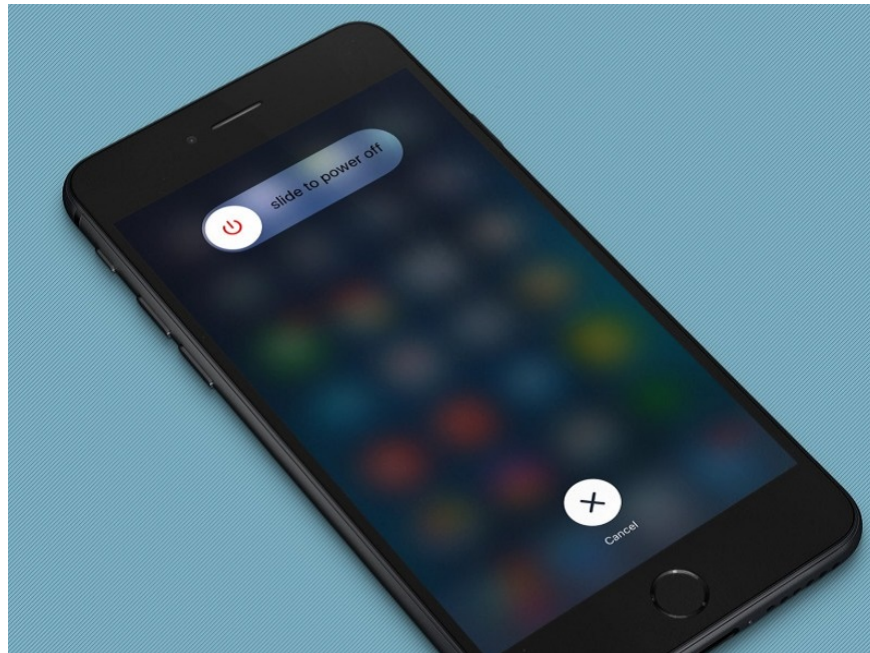

The last reason is that you use your phone continuously, charge and use it at high intensity, but the more times you charge the battery, the battery has to work continuously, making the battery bottle bottle.

2. How to fix battery charge error on iPhone

Reboot the device

When you find your battery charge drops in percentage, you can restart your phone to help it get rid of background apps which can be an effective method.

Check the power supply

Charging the phone but the battery lag can be caused by your power supply is not guaranteed, you should carefully check the transmission lines of the devices to make sure the current is not a problem. Charging the battery with an unstable power source may damage the charging receiver of the device.

Use original charger

Using the charger for your iPhone needs to be a quality Apple product or you can use a different charger but make sure it's compatible with your phone.

Charge the battery properly

During the charging process, you should not charge the battery while using the phone while charging and using it very easily, making the iPhone easily overheat and the fast battery pack can make the battery charge even more draining.

Replace batteries

With the cause of the more and less the battery charge is due to the bottle of your battery, the best solution now is to need to replace the battery for your phone. This also prevents your phone from software damage due to an unstable battery.

Take it to a service center

Once you have used all of the above measures but have not worked well, all you can do is bring your phone to a service center because it may be severely damaged.
