3. iOS 12 will allow you to turn your iPhone into a smart key

1. iOS 12 update failed

When Apple releases the official iOS version, there will be many people who want to experience it quickly, so the number of devices required to update suddenly and can lead to the requirement of failure update is understandable. Besides, some of you seem to be more fortunate, the iOS update has a very slow download speed or even the download is still not able to be installed.

How to fix:

To fix the iOS 12 error update failed, please delete the update in case the download is complete but not installed by going to **Settings> General settings> iPhone capacity** . After that, wait a moment and then check OTA

again at **Settings**> **General Settings**> **Software update** .

If the above method is not feasible, please update it via iTunes or you can install it manually (via iTunes or 3uTools).

2. Did not find iOS 12 update via OTA

Some of you said they could not find the iOS 12 update version for the device via OTA upgrade at **Settings (Settings) > General settings (General) > Software Update (Software Update)** . The cause of this error may be because your device does not support the implementation of iOS 12 update. To check which iPhone and iPad models are included in this update support list, you can refer to List The list of devices upgraded to iOS 12 has been previously shared by Network Administrator.

Also, if you are using iOS 12 GM, of course you will not be able to find the update via OTA, because this version has a build number similar to the official iOS 12. In case you still want to install the official version to experience, it is only possible to reflash the device via iTunes or 3uTools.

3. No new features found

It is known that some new features on iOS 12 such as Memoji, Siri Suggestion for shortcuts or camera effects (Camera Effects) are not available for older iPhone models. So, even if you have updated iOS 12, you may not be able to use all the new features.

Except the FaceTime Group Calling feature (FaceTime group call) is not yet available with the release of this OS update. According to Apple, the company will release the feature separately by the end of this fall.

4. Bluetooth connection error

This is also a problem many people are concerned about when making iOS 12 update successfully, their device suddenly cannot connect Bluetooth devices. With this error, please restart iPhone (hold down the power + Home key simultaneously until the machine shuts down).

5. Battery drop / performance is drastically reduced

While updating iOS 12 has a great experience when using it, many users complain that their device has lost the battery very quickly. This is a matter of course because every time the iOS operating system is updated, it will work a bit unstable in the beginning.

How to fix:

To fix this problem, restart the computer or use up the battery and then recharge it. If it still doesn't work, you should check the applications that run in the background at **Settings> General Settings> Batteries** and then give yourself a reasonable solution. Except for the worst case, you must bring the device to the nearest reputable repair facility for assistance, because the error may come from the device's battery.

6. A 3rd party application has a conflicting error, or automatically shuts down

A lot of you complain that some applications, games on iOS 12 beta work unstable, frequent occurrence of sudden escape. The main cause of this problem is that your application is using a version that is not compatible with the new iOS 12.

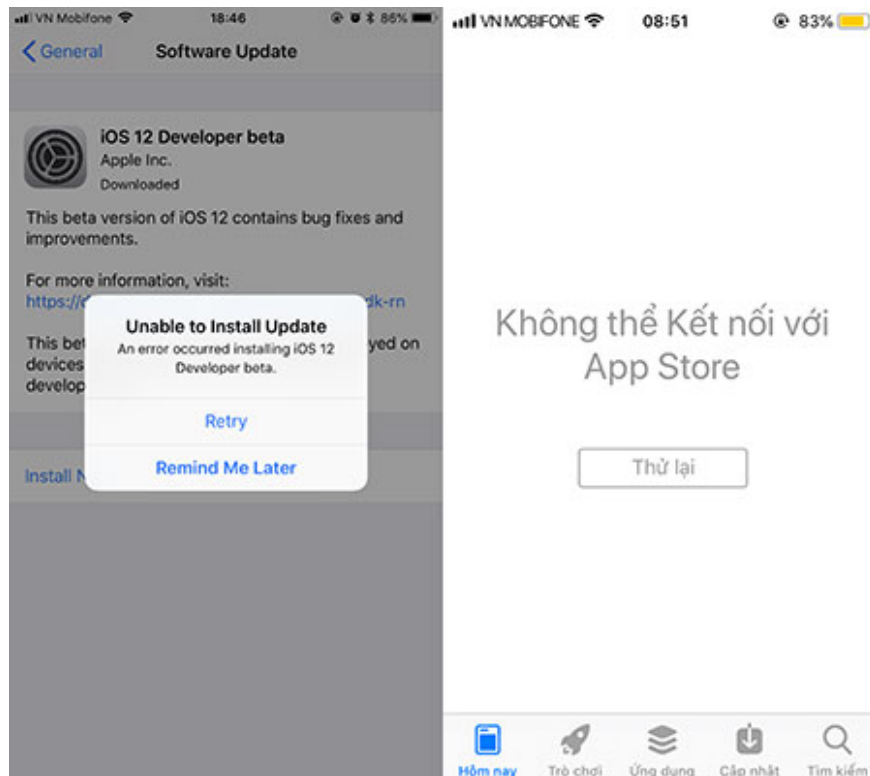

How to fix:

Please update the application you are using to the latest version, or you can choose to remove it and reload in case we cannot access this application.

7. Error not accessing AppStore

With iOS 12 beta, the most common mistake users complain about is not accessing the App Store, and of course downloading these applications is also interrupted.

How to fix:

Currently the online community has a temporary fix, details you can refer to the article [What to do when the device can not access AppStore on iOS 12 Beta](#) that we have shared before.

8. Wave, bluetooth and clock icons are blurred with black border

The error on this iOS 12 does not seem to be noticed by many people, you only clearly see the wave, bluetooth icon, the clock is blurred black border when using bright, white backgrounds.

How to fix:

In order not to affect the usage process, you can search and replace the dark wallpapers for iPhone and iPad to fix this error.

1. Download now a collection of high quality wallpapers for smartphones

9. Cannot play WiFi on iPhone iOS 12

Although few people use the WiFi feature on iPhone and iPad, it still affects the use of a large number of users when it is impossible to share the Internet on their device to those around them. in times of need.

How to fix:

Handling this error, you need to be able to follow the steps in the guide to reset the network, reset the network connection on the iPhone. This operation is complete and you have fixed the iPhone problem, iPad cannot play WiFi.

10. Error using Siri Shortcut icon

As you know, on iOS 12 update we get an improvement with Siri virtual assistant named Siri Shortcut. This feature allows you to access using Siri virtual assistant faster, but until now many friends who have updated iOS 12 successfully are not yet experienced.

How to fix:

In fact, this feature on iOS 12 only applies to programmers and application developers, so the current version of the universal user will not be used.

11. Swiping between screens for a while is stalled

On technology forums, some members said after installing iOS 12 beta they encountered problems related to changing tasks on the iPhone screen, namely swiping between screens. The image is a bit stalled. In fact, this is common after you update iOS 12 for iPhone, iPad in a short time, because the device's performance will work continuously to meet the changes of the system. .

How to fix:

For this error, proceed to restart your iPhone by **holding down the Power (Power) key** for 3 to 5 seconds. Then, you will swipe the screen according to the icon that appears on the screen above, when your device is completely turned off, you continue to hold down the Power key to restart the iPhone.

1. When is the last time to restart iPhone?
