**TipsMake.com - ESET's Cybersecurity security application for Mac is a 'member' of the NOD32 family , consuming a lot of system resources while ensuring safety for the operating system .**

## Installation process

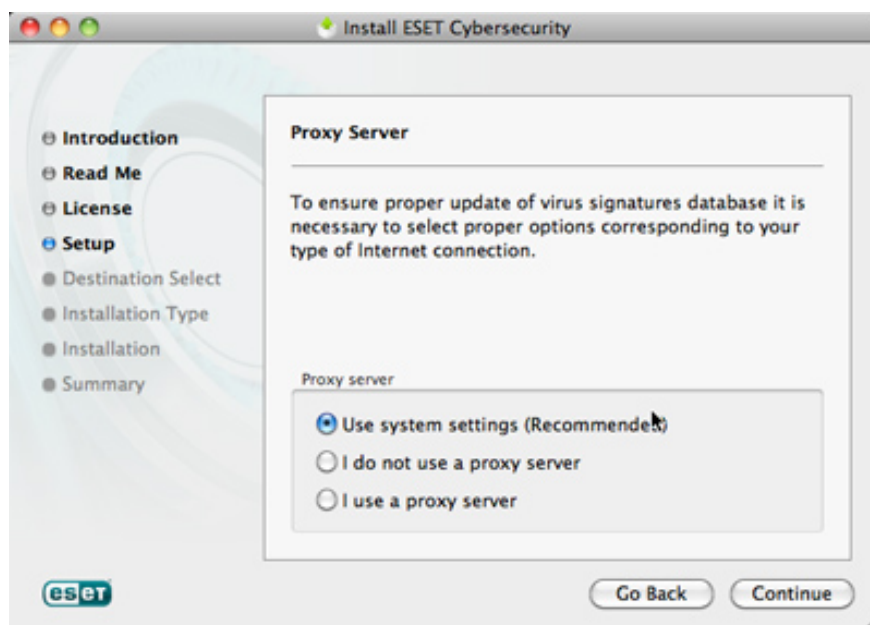

Cybersecurity is as easy to install as any program for Mac, but must restart the system after finishing:

Choose *Typical* or *Custom* mode according to your needs:

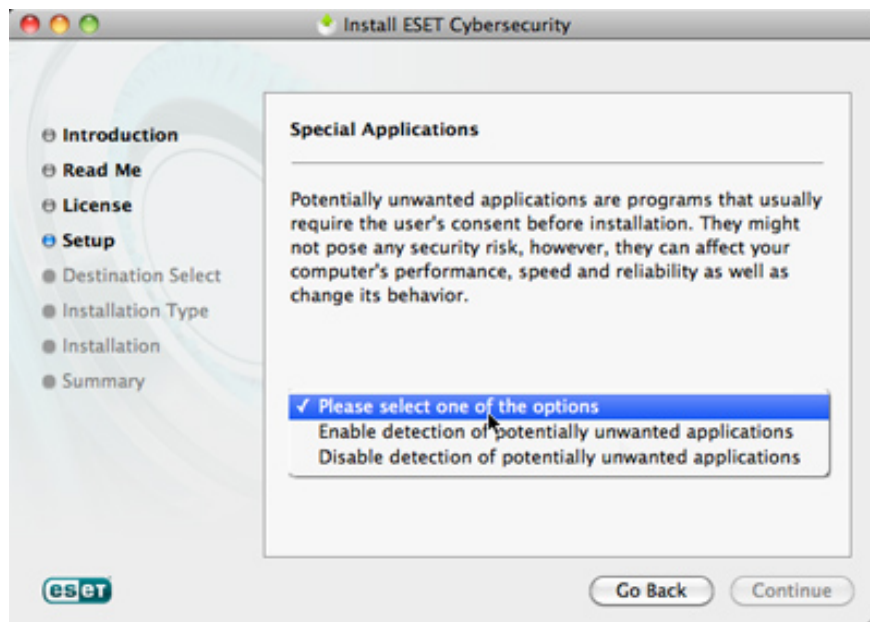

If you choose *Custom* you can adjust and set up proxy:

Set and assign user account permissions:

Selecting a treatment plan when *Cybersecurity* detects strange programs:

## Features and usage

The program is fully integrated with essential basic functions, simple and easy to use interface:

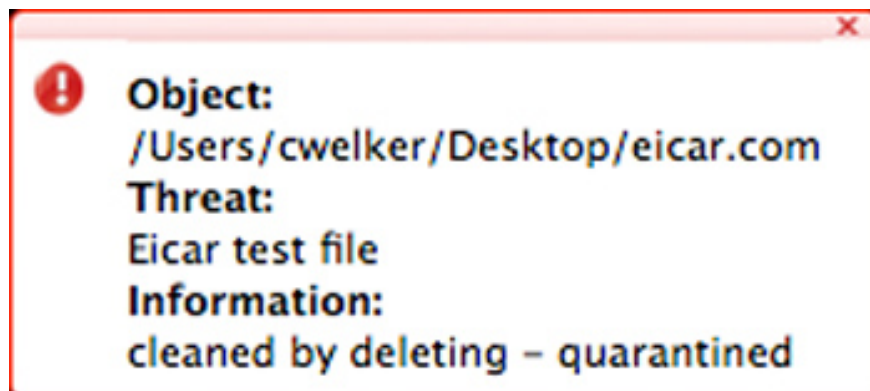

All properties are enabled, fully updated, the program will display green

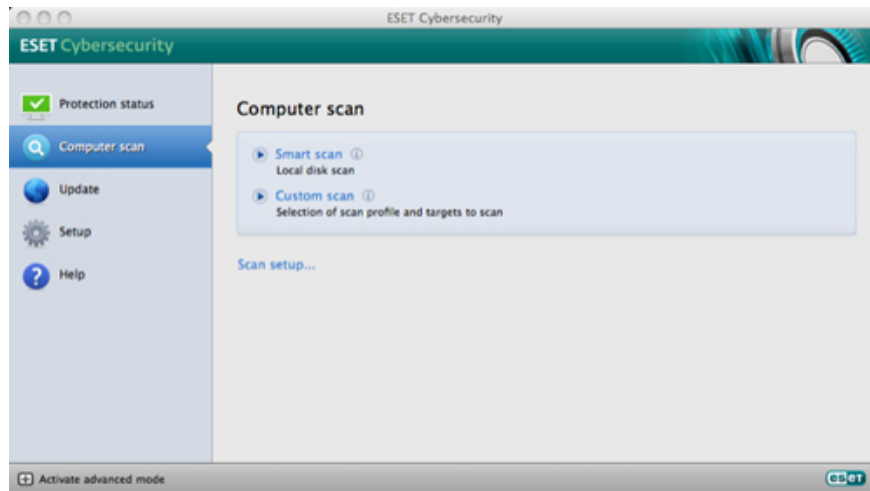

And conversely, red means the maximum protection of missing or missing components:

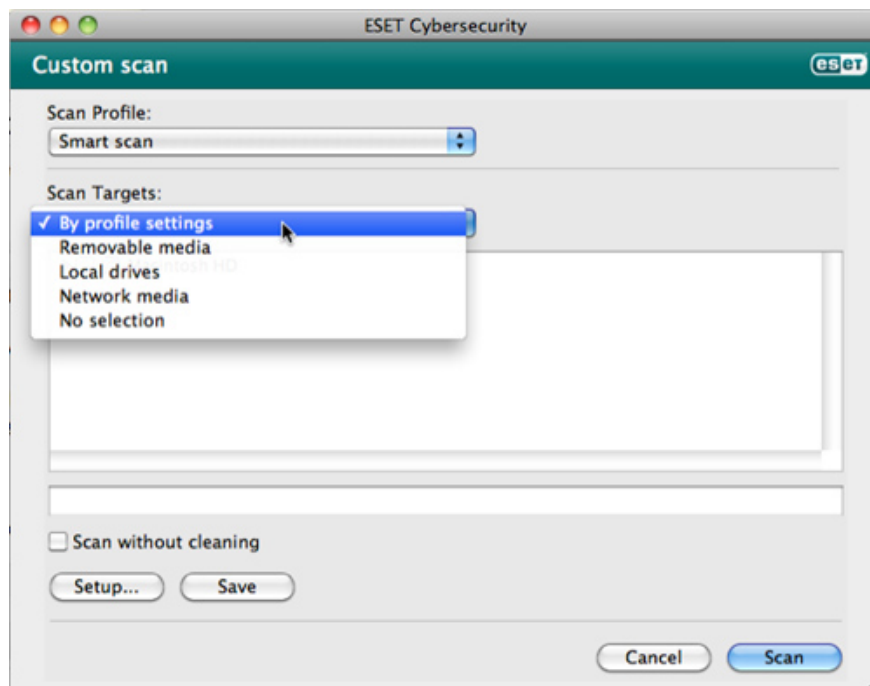

If you download any file containing a virus, the program will display the message and process it immediately:

In the *Computer Scan* tab, there are 2 options: *Smart scan* - scan the program's default settings and *Custom scan* - adjust according to your own settings:

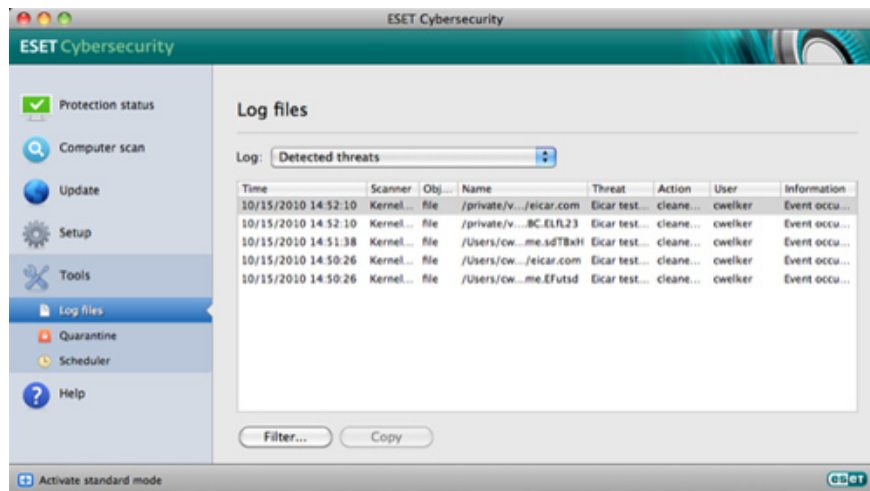

With *Custom scan* mode, users select individual partitions, folders or other options to scan:

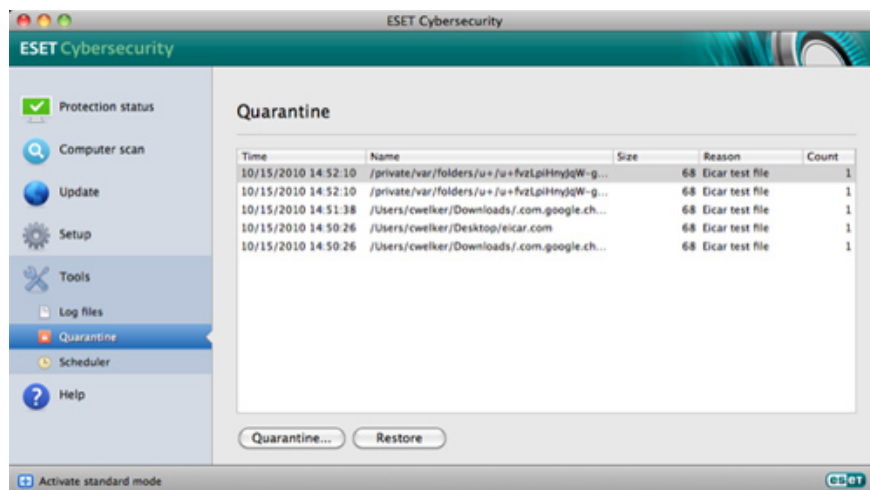

Check the update status of the program in the *Update* tab:

In addition, *Cybersecurity* also records all detailed information about the scanning process as a log file in the *Tools* section:

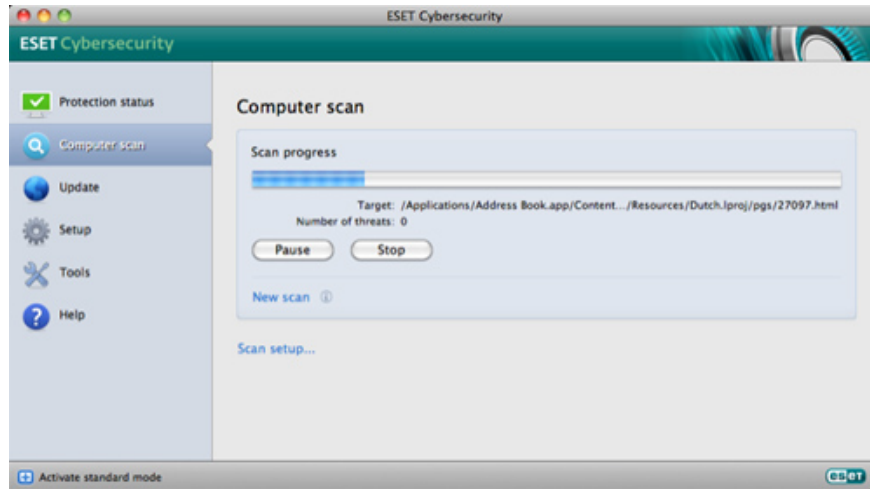

List of files detected and quarantined - *Quarantine* :

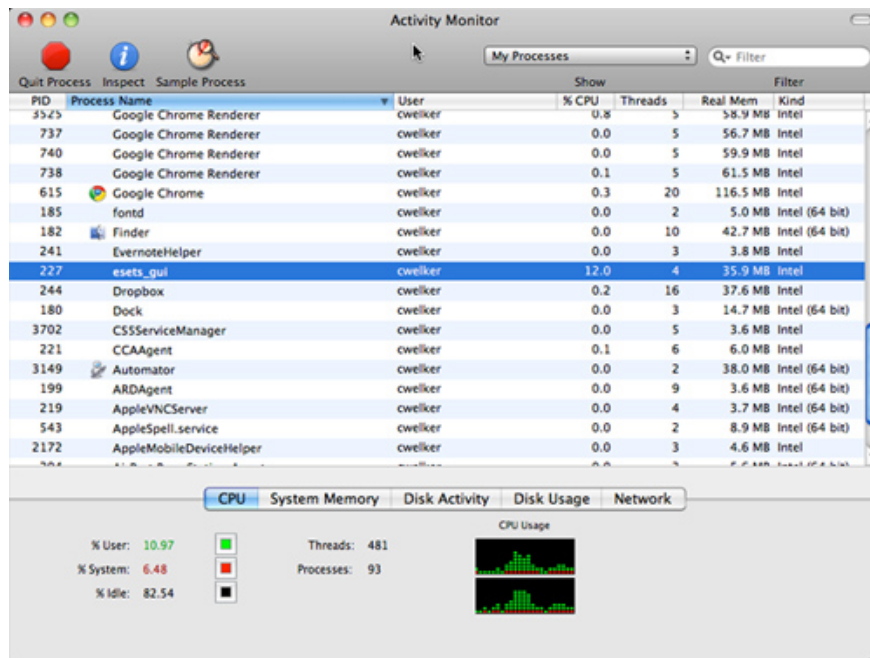

## Performance performance

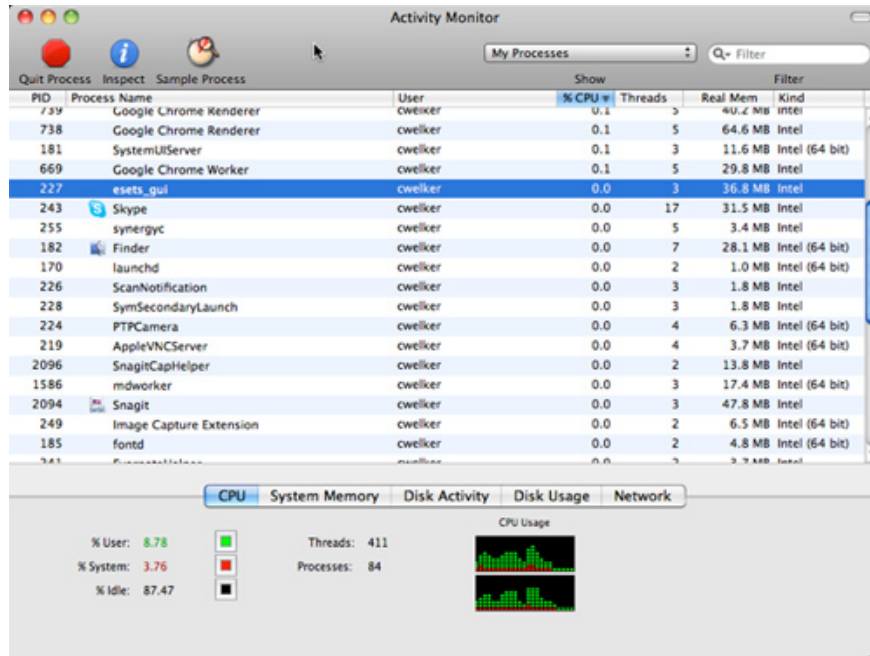

Cybersecurity works quite quietly and almost does not affect the system, here are the details of operating on the computer with the configuration of Core 2 Duo 2.8 Ghz, 4GB DDR3 - watching videos directly on DVD or playing games Flash online and still don't seem to be jerky or laggy like other programs:

During scanning, Cybersecurity uses an average of 15% of CPU speed, and this number ranges from 9% to 20% only:

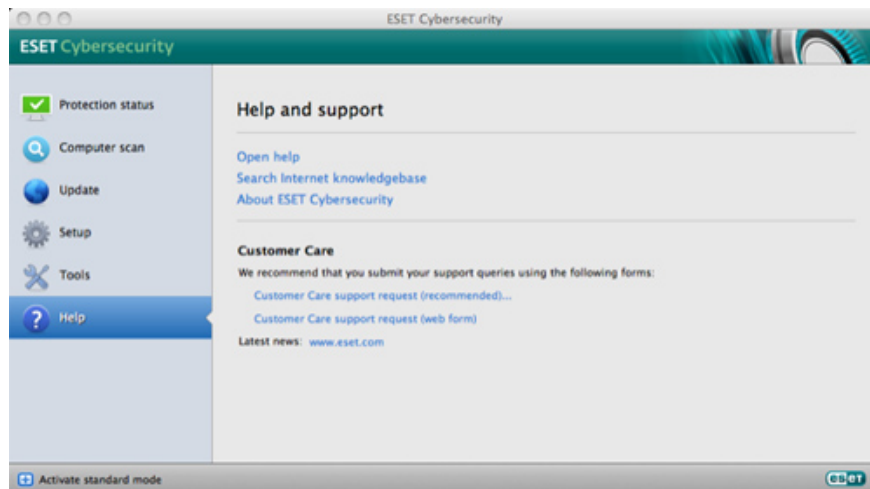

And when not scanning, the program uses 0% of CPU performance:

## Technical assistance

ESETs provide a lot of technical help information, such as the basics, available form templates or discussion forums:
