

# Experience the Fujitsu UH-X - the world's lightest high-end laptop

Fujitsu UH-X not only has a slim appearance, great convenience, but also possesses strong internal power, demonstrating the 'modern entrepreneur' quality of the owner.

For many people, usability is always a top factor when choosing to buy a laptop. And it is clear that when it was introduced as the world's lightest laptop, Fujitsu UH-X immediately made the technology community in the world stir up.

## Super compact but fully equipped

With a weight of only 749g - the world's lightest, of course the Fujitsu UH-X possesses a very slim appearance, when holding in your hand you will be surprised by it feels like holding a tablet.

The overall design of this laptop is extremely simple with a logo on the front, the other is a matte black that feels very cool. This minimalistic style is actually very 'delicate' when users easily blend into the machine, not be distracted when working. This is a product that shows the owner's personality, who does not like to be flamboyant because they are completely confident in their own internal strengths.

The case is composed of high-grade magnesium-lithium alloy made by Japanese artisans Takumi with the most perfect requirements. Fujitsu UH-X can withstand strong shocks, falls from a height of 76cm, and is under pressure to compress the entire machine 200kgf, a car inserted through it is no problem. This ruggedness gives

users complete peace of mind when faced with an unfortunate situation, their laptop still works normally.

Usually thin and light laptops will have significantly reduced ports and users will have to buy additional ports to meet their needs. But not for Fujitsu UH-X.

This laptop is fully equipped with the necessary connection ports for daily use and for presentations or LAN connection to increase the security of specific agencies. We can find high-bandwidth standard USB C 3.2 Gen2 3.2 Gen1 port cum the latest generation charging port, USB A for popular devices, HDMI easily connects to discrete screens or projectors, card reader slots. SD is convenient for content creators and audio jack 3.5 combo.

Fujitsu UH-X screen joints are capable of opening up to 180 degrees, increasing mobility and making it easy for users to share the screen with colleagues or partners during small meetings or simply exchange work. .

The keyboard and touchpad duo on the world's lightest laptop is also a big plus, especially the keyboard is excellent. The buttons are moderately sized, the 1.5mm stroke is long enough, and the bounce is good for a great typing feel. The font on the keys is classic, easy to see and equipped with LED backlight, so it's still good to use at night.

Because of sacrificing a lot of space to bring an excellent keyboard, the area of the palm rest and touchpad is significantly reduced. However, this Fujitsu UH-X trackpad is still fine with its smooth surface, high sensitivity, and perfect multi-touch.

To enhance security, the NSX has integrated a fingerprint sensor right on the power button, helping users to open the device more quickly. In addition, for those who are careful, the device also has a physical webcam cover on the top edge, when not in use, just a light swipe is absolutely safe, ensuring complete privacy for users. Capital is very concerned with the privacy of personal information as well as work.

## Impressive overall performance

Despite its slim appearance, this does not prevent the NSX from bringing inside the Fujitsu UH-X a full-fledged 'internal' configuration. This laptop is equipped with powerful hardware including 11 generation Intel Core i7-1165G7 CPU, 16GB DDR4 RAM (Dual channel), 1TB SSD memory, Intel Iris Xe GPU.

The laptop proves to be always ready for work when it comes to a super-fast boot time, along with the time to 'wake up' from sleep (close and open) only about 1 second.

It would be a mistake to ignore the Fujitsu UH-X screen when it comes to the experience of using this laptop. The brightness is moderate at 400 nits, but combined with a good anti-glare coating, it is easy to use the device outdoors in the shade, still a bit uncomfortable if used when it is hot. In addition, this coating also makes the viewing angle a bit narrow, increasing security and privacy when working in public.

In terms of visibility, the screen on the Fujitsu UH-X is 13.3 inches in size, full HD resolution, LED backlight, 60Hz refresh rate. IGZO panel offers fine detail, smooth images and good colors. The screen bezel is very thin, almost leaving the bottom edge, so the ratio of display area is about 84%, helping to ensure optimal work performance for busy users.

Fujitsu UH-X can run continuously for about 4-5 hours with normal tasks, which means that users only have to recharge once per session. Although this is not too impressive battery life, but with the whole weight of the charger only about 1kg, carrying it all in a compact bag / backpack is very simple and convenient.
