

Experience the iOS 13 Public Beta version, Dark Mode interface, completely new Apple Maps and Reminder application

Here are the most outstanding features of iOS 13, you can consult before deciding whether to update this test or not.

Recently, Apple has officially launched the first version of iOS 13 Public Beta, allowing all users to download and experience. This experience version has a lot of changes and interesting improvements such as the new Dark Mode interface, completely new Apple Maps and Reminder application, swipe keyboard .

Here are the most outstanding features of iOS 13, you can consult before deciding whether to update this test or not.

Dark Mode interface

The iOS 13 Dark Mode interface will turn the entire system, Apple's default application, Settings menus, and notifications into a dark background. Since the API has not been updated, third-party applications have not changed.

To activate Dark Mode on iOS 13, go to Settings -> select Display & Brightness. Meanwhile, the interface of the entire installation will turn black, the main screen interface is darker, the font changes to white, the dock below the place where the application calls and the message is also darker. .

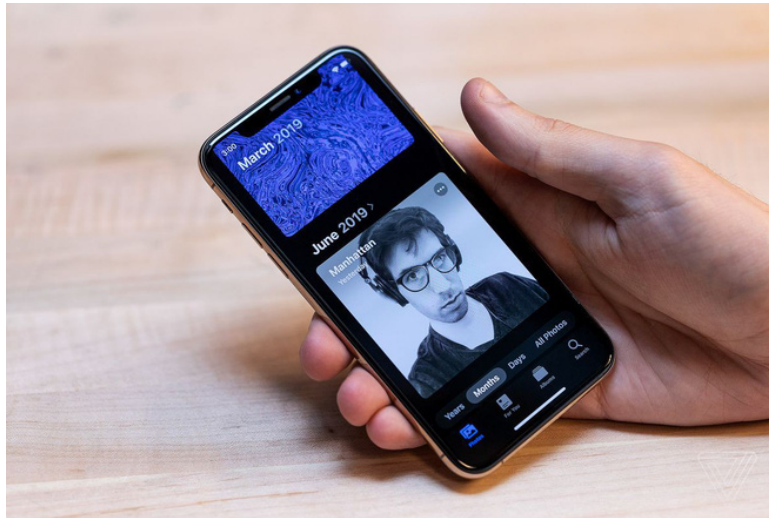

With iOS 13, users can choose to set up based on the setting of the Sun or schedule to automatically switch to the Dark Mode interface.

Photos

The default iOS Photos app has added new features including:

1. New view.
2. Automatically arrange smart photos.
3. Suggest commemorative photos from time to time or remind you of commemorative photos of the past years to help you remember old memories.

1. Set of new photo editing tools with simple interface, only one scroll wheel to adjust the level for each editing mode. This tool allows users to adjust brightness, saturation, white balance, contrast, dark light, sharpness, texture and noise reduction easily.

Apple Maps

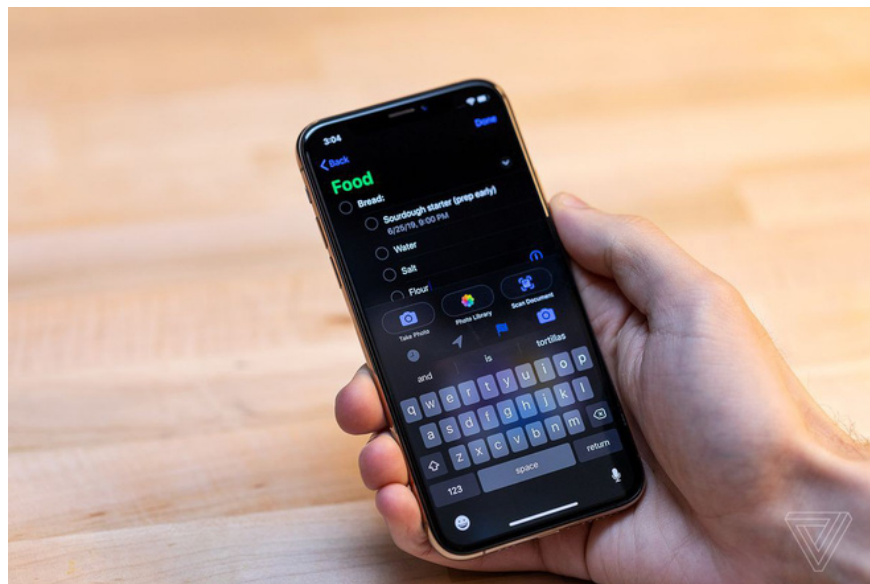

iOS 13 has a completely new Apple Maps application, simple, lightweight, significantly improved processing speed. In addition to the necessary information on the routes, the application also displays the names of restaurants, attractions, hospitals, gas stations, ATMs .

Reminder

New Reminder application in iOS 13 is improved with a modern interface, easier to use than the old application. Users can easily add addresses and images to the prompt.

Siri virtual assistant in the application becomes more useful, users can order Siri to add a prompt.

Other changes

The new Find My app has a very nice interface and adds search features even when the device is offline, thanks to the Bluetooth network.

New swipe keyboard is quite interesting but only works on English keyboard, not yet support Vietnamese keyboard.

The interface of the volume indicator on iOS 13 is only a small pull bar located on the left instead of a very large square displayed in the center of the screen. This change makes the screen invisible when you adjust the volume again. This is especially useful when watching movies or playing games.

iMessage is also improved, the change interface is easier to see, search more useful, allowing you to automatically share your name and avatar with others when texting together.

Memoji has many more customizable, usable and customizable memoji for stickers in iMessage.
