

# Experience trying Lotus social networks

Currently, users can download Lotus social networking applications on both iOS and Android on the machine and experience.

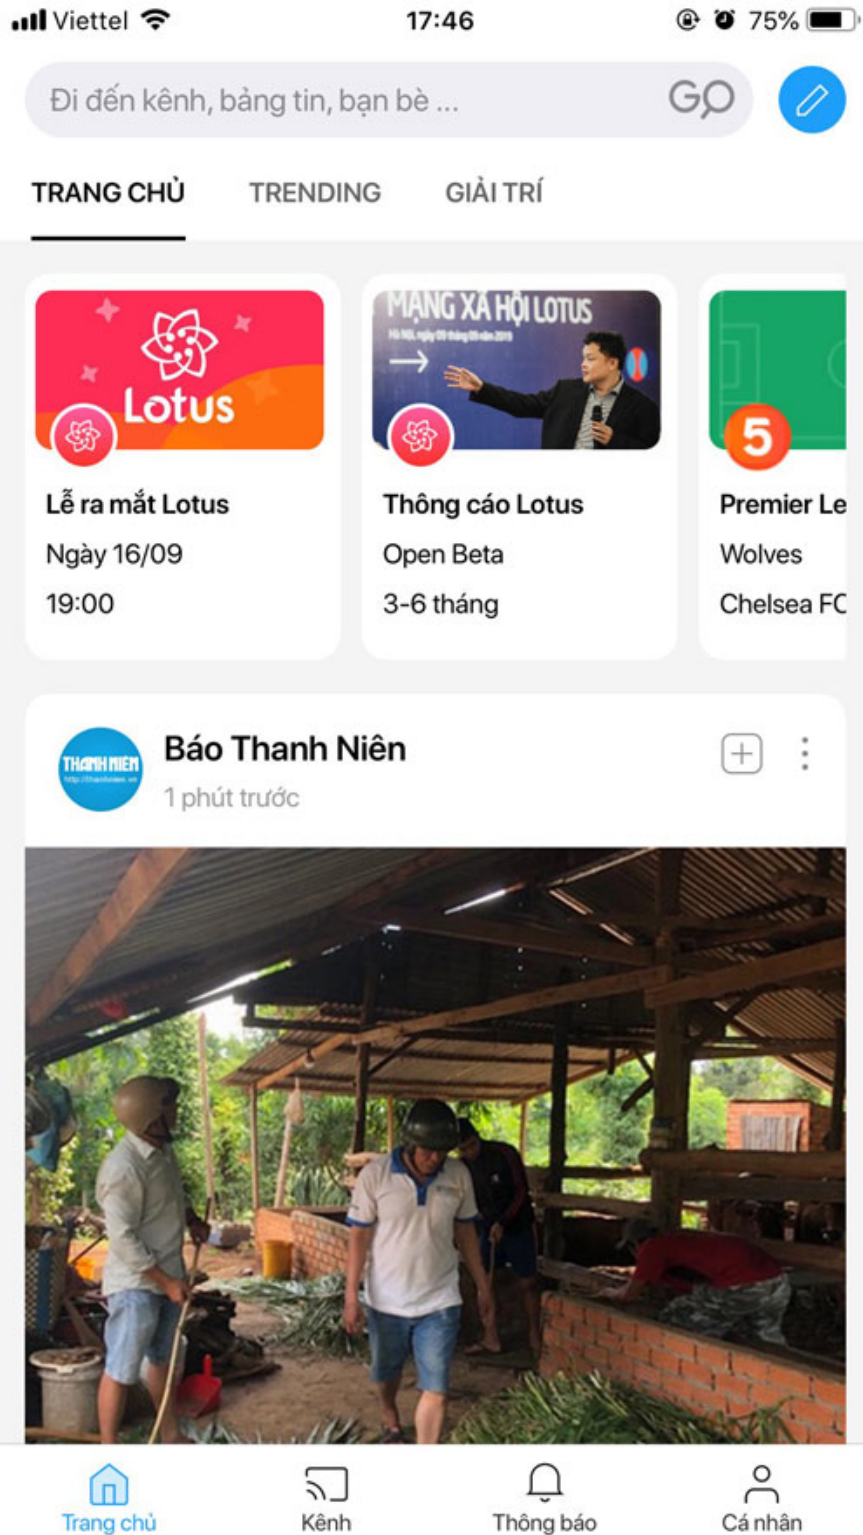

Lotus, the 'made in Vietnam' social network, will officially launch at 7:30 pm tonight (September 16) and be streamed live on Lotus.vn and VTC1 channels. Currently, users can download Lotus social networking applications on both iOS and Android on the machine and experience.

1. Lotus - the 'made in Vietnam' social network has opened an account registration and trial
2. Revealing the invitation card of the Lotus Festival launch, full of "magic" and magic

Here are some of the first Lotus social networking experiences, please refer.

The first impression when trying to social network Lotus is an application with a beautiful interface design with blue and white tone as the main theme to create a gentle and clean feeling.

Lotus Social Network has 4 main tabs including Home, Channels, Notifications and Personal.

The Lotus social network home page is divided into 3 parts including:

1. Homepage: A place to display posts from user-tracked sources or recommendations according to user activity analysis.
2. Trending: A place to gather the latest trending information on the network, users do not register to follow, but this information receives great attention from other users on Lotus social network.

3. Entertainment: A place where clips, videos, images are funny and humorous, with the trend of "having fun" by users who create or upload themselves.

Each post on Lotus includes 4 main functions: Retus, Loan, Send and Save.

Currently, the Save feature is not available on this version.

Retus and Loan believe: These are two main forms of sharing when users want to share content on Lotus. The difference in these two forms is that with Retus users can share with comments and Loan does not.

Send: Users use this feature to share stories from Lotus to other applications such as Facebook, Gmail, Zalo .

Under each post there are 3 features for users to discuss, interact directly with the information flow including likes, comments, stars.

In particular, the like feature and the message feature only shows the number of visits, specific user accounts are hidden to protect identity.

The title star feature allows users to give reviews for posts that are relevant, useful, humorous, etc.

On Lotus, a new feature different from other social networks is the token. This is a review unit for every react received from good content posts. Token history helps users know how they created and used tokens. Depending on the subjectivity of the post, each person can give tokens as they like. This means, the more quality and reliable the content of the post, the greater the chance of getting tokens from others.

The more tokens the post receives, the greater the chance that the post will appear on the message board.
