

Experts point out two reasons that SARS-CoV-2 is not an 'artificial product', giving advice on how to protect itself.

Don't let misleading information confuse you in the Covid-19 epidemic.

Tell you about Professor Michael Osterholm: he is a renowned expert on infectious diseases, director of the Center for Research and Policy on Infectious Diseases (CIDRAP), lecturer of the Faculty of Environmental Health Sciences and has Experience both in science and engineering.

With knowledge of all three fields of science, engineering and medicine, Mr. Osterholm wrote the book 'The Most Dangerous Enemy: Our Fight Against Deadly Bacteria' in which Osterholm anticipated a disease can spread from China, with pathogens originating from animals.

Michael Osterholm and his book 'The Most Dangerous Enemy: Our Fight Against Deadly Bacteria'.

In a talk with Joe Rogan, YouTube's famous Joe Rogan Experience podcast, Mr. Osterholm spoke more closely about the origin of the SARS-CoV-2 virus, giving two reasons that it was not a product. created by people.

First: carbon dating techniques show that the origin of SARS-CoV-2 comes from animals

If you do not know, carbon dating technology is the analysis of the life of an organic object, by determining the properties of the carbon-14 isotope in the object. According to Professor Osterholm, the properties of carbon-14 suggest that SARS-CoV-2 comes from animals, most likely wild animals on sale in China's wet markets. More specifically, it is likely that wild animals at the market are now closed in Wuhan.

This is one of the reasons Osterholm asserts that SARS-CoV-2 is not a biological weapon as many people have speculated.

SARS-CoV-2

And the second reason: technology is not developed enough for us to produce SARS-CoV-2 virus

According to Mr. Osterholm, the structure of the SARS-CoV-2 virus is so complicated that only Mother Nature can afford it. With a background in both biological research and biological weapons since the 1990s, he can make sure that SARS-CoV-2 does not come from a laboratory.

The reason many believe this conspiracy theory is because in Wuhan, where the SARS-CoV-2 originated, there is a famous bio-weapons laboratory.

During the talk, Professor Osterholm talked more about how anti-virus can be implemented by each individual.

Everyone has the immune system to help the body prevent disease, and to strengthen this natural shield, we need to keep in shape, to avoid the case of overweight and disease. The regular exercise will help the body more robust.

Besides, boiling and drinking boiled food, creating a good eating habit will create a great advantage for the body before the outbreak of Covid-19 is booming in many countries. Get enough sleep to rest your body, avoid excessive anxiety and insomnia, because if you have followed the safety measures, protecting yourself from SARS-CoV-2, you should not worry.

The professor also added that the outbreak of Covid-19 could be a wake-up call to countries around the world against future diseases. Prior to the outbreak of SARS-CoV-2, no country had planned to prepare for a bad scenario, despite having been warned about the same threat of SARS-CoV-2 for many years.

The fight against viruses is long and hard. Professor Osterholm asserted that the virus will not disappear when the summer comes, so in addition to methods to prevent outbreaks from the local government, every citizen needs to be aware of the law and immediately quarantine when the body. signs of SARS-CoV-2 infection.
